**We offer you 30,000
of the finest miles you
ever drove!—**

**with the first-
year feel in every mile**

We announce the New Mobiloil—an oil so startling in its performance that the superlative statements we are ready to make about it are actually conservative.

For example, when we say that with regular draining and refilling, plus common-sense care, this New Mobiloil will keep the first-year feel in your new engine for at least 30,000 miles, the facts are that in a great many engines the New Mobiloil has kept the first-year feel for more than twice this distance.

Repeated road and laboratory tests have proved that use of this New Mobiloil commonly assures from 10% to 30% more power than other oils generally sold for the same motor.

Under high speeds you will find, as our road tests have repeatedly shown, that this New Mobiloil stands up better and consumes more slowly than other oils . . . and it is an established engineering fact that the oil which lasts longest and stands up best at high speed also lubricates best at any speed.

Try this New Mobiloil. It will help save your good engine from growing old before its time. Mobiloil—the World's Quality Oil—is made by the Oldest and Largest Specialists in Lubrication.

VACUUM OIL COMPANY

Makers of high quality lubricants for all types of machinery

the New

Mobiloil

Generating Brain Power for 1950

Back of this monogram are the accumulated experience and skill of the world's largest organization engaged in the manufacture of electrical materials and appliances. Always and everywhere it is a safe guide to electrical quality and dependability.

THE chief operating requirement of the General Electric Company, and of the electrical industry in general, is not horsepower, but brain power.

This requirement must be continuously anticipated. The leaders of the future must not only be born, but *made*. Accordingly, the General Electric Company maintains at Schenectady and elsewhere a post-graduate college of electrical science which has achieved a unique position in the engineering world.

The faculty includes inventors and engineers of international distinction and authority. The students—more than 400 of them are enrolled every year—are the picked graduates of the best-known American and foreign technical schools and universities. The graduates provide not only this company but the electrical industry in general with many of its most valuable leaders.

GENERAL ELECTRIC

Suddenly, out of a spring sky . . .

*An Advertisement of the
American Telephone and Telegraph Company*

ALL was well on the telephone front on April 27, 1928. Suddenly, out of a spring sky, rain began to fall over central Pennsylvania. As night came on this turned into a furious storm of sleet, snow and wind. Inside of 48 hours, 3700 telephone poles were down. Seven thousand miles of wire tangled wreckage. Thirty-nine exchanges isolated. Eleven thousand telephones silent.

Repair crews were instantly mobilized and sent to the scene. From Philadelphia 47 crews came. Other parts of Pennsylvania sent 13. New Jersey, 6. New York, 4. Ohio, 6. Maryland and West Virginia, 12. In record time, 1000 men were stringing insulated wire and temporary cables along the highways, on fences and on the ground.

Within 72 hours the isolated exchanges

were connected and the 11,000 telephones back in service. Then, while the temporary construction carried on, neighboring Bell System warehouses poured out all needed equipment, new poles were set, new crossarms placed and new wire and cable run.

In any crisis there are no state lines in the Bell System. In all emergencies of flood or storm, as well as in the daily tasks of extending and maintaining the nation-wide network, is seen the wisdom of One Policy, One System, Universal Service.

Better and better telephone service at the lowest cost is the goal of the Bell System. Present improvements constantly going into effect are but the foundation for the greater service of the future.

Contents for April, 1929

No. 4

<i>Einstein's Special Features</i>	
Fighters of the Air	546
The Great Sahara Treasure Hunt	554
The World's Queerest Jobs	562
Rocks That Fall from the Sky	570
The Center of the Universe	578
Saving All but the Squeaks	586
Where Men Defy Death	594
The Wonder Metal	603
14,000 Hours in the Air	610
Cotton's Rival	619
The Bug Boarding House	625
"Signing Off"—Heroes of the SOS	649

Agriculture—forecast invasions of pests to protect crops	640
Airplanes	
all streamline flies at great speed	631
England builds secret plane	609
four thousand engines doomed to be junked	621
hot wire measures winds in tests	575
plane rescues injured nun in Alaska	618
plane solves sea mystery in finding ship	560
where latest designs are tested	635
Archæology—ancient burial pit reveals royal splendor	636
Automobiles—"joy rider" for, is latest amusement	609
Automobiles—Accessories	
safety throttle for saves gas	592
spring clip for valve tappet	636
valve spring tester helps save gasoline	599
Automobiles—Driving	
automatic brake promotes safety	584
distant switch starts auto	605
mobiles—Lubrication—automatic oiler reaches all parts of car	560
Aviation	
airport like country club	622
correction of article on "Women of the Air" in January	640
navy airplane carriers	632
radio talk with Byrd plane sets wireless record	552
Lights—small, put out lights by short circuit	608
Blood—made with chemicals to help gas victims	615
Boats and Boating	
engine in extreme stern of new English speed boat	593
inland harbor for yachts	545
outboard motor boat for shallow waters	628
Boxing—punching bag worn on head	630

Bridges—automobile toll, to link Oregon and Washington	621
Building Construction—add stilts to old building for extra stories	634
Building Materials	
kill germs that eat stone	561
sea grass serves as insulator against sound and heat	561
Busses—fuel oil replaces gasoline in	602
Camera—automatic focusing possible for home-movie	640
Cards (Playing)—holder fits on fingers	576
Chemicals—boy discovers new explosive	577
Coal—filters salvage coal dust floating on river	590
Coins—eagle's feet on silver dollar right?	545
Color—magic effect of keeps steel cool	636
Compass—sliding-beam promotes accuracy	592
Cotton—substitute for	619
Crime	
revolver rack on auto dash aids police squad	552
thief snared by powder sprinkled on purses	577
Curtains—tracing cloth for admits rays	569
Dams, Boulder—America's greatest reclamation project	622
Department Store—two million pennies a week used by	599
Drain Pipes—air gun to clean out	577
Earthquakes	
ship feels	553
slightest tremors shown on new recorder	646
Education—stuttering child as bright as normal pupil	616
Electric Fixture—light cast from any angle by jointed	609
Electric Plant—portable for light and power	568
Filling Station—water kept from gasoline by safety valve	634
Fire Fighting	
freezing gas curbs fires	590
skyscraper fire tests fighters' skill	602

669

Fish and Fishing—"Hooligan" fish supplies both food and light	617
Footrest—paper covered for shoe stores	637
Games—basketball played on table	600
Geese—weed berry patch	559
Golf—nine-hole indoor game improves putting	575
Grain—model elevator loads cars and boats	629
Heater, Electric	
in the form of a slender bar	589
warms bed and serves as drier	569
Helium—plant "coldest spot" in the world	631
Hotel—in form of boat features lake resort	592
House—three story of glass	605
Household Devices	638
House Plan	703
Insects—as leprosy carriers	600
Insulators—million-volt electric flash tests	553
Inventions—women gaining as inventors patent records show	568
Lamps—shields for tower	608
Lock—chain, releases gas to foil thieves	624
Lubrication—fitting closes open oil hole	561
Marble—red ink stains on removed with lime	602
Memorial—lights on churchyard cross	569
Metals—aluminum mixed with gold aids dental work	590
Milk	
aluminum bottle caps	622
float prevents skin on while boiling	608
Milk Bottle—wood fiber for replaces glass	624
Moon—like volcanic ashes temperatures show	637
Motor Bus—safety wheels for	640
Motorcycle—run by rockets	629
Moving Pictures	
home movie and radio play are linked together	616
polar bear proves good "actor" in talking movies	637
talking movies made in home	552
Nursing Bottle—holder for fits on high chair	695
Phonograph—cardboard makes sound box for	600
Pliers—long for many uses	602
Power Plant—electric eyes replace men at	575
Pumps—run by outboard motor	577
Radio	
bench for Spanish cabinet	654
helpful hints from experts	658
solve mystery	630
Radio—Application—radio record on dictaphone speeds news reports	591
Radio—Broadcasting—an experimental microphone	647
Radio—Condenser—homemade aerial-coupling	647
Radio—Eliminator—new rectifier for A-eliminator	647
Radio—Receiver—combination radio and phonograph amplifier	653
Radio—Reception	
curing noise in set	661
device stops man-made static	653
greater selectivity for the old set	647
grounding of transformer cases eliminates hum	661
Radio—Tube	
checker operates from a.c. line	661
operating unit for a.c.	653
Railroads	
dining car without wheels serves as school	585
engine half a block long	584
light rays control train	630
River—heating with steam prevents freezing	576
Roads—rough roller for hard	621
Robots—that walk and talk	606
Safety Devices and Measures	
gate stops autos at rail crossings	576
lower lifeboat on track	605
Searchlight—sends code by radio control	616
Shovel—mammoth electric being built to break all records	618
Skis—motor, at Swiss resort	561
Stamp Collection—printer's error adds value to stamp	634
Telephone	
double earpiece for allows two to listen	545
loud speaker for leaves hands free	593
roller skates speed service in exchange	636
Tennis—gun helps players practice	616
Toothbrush—spring-motored for pocket	618
Traffic—two-level streets planned to speed Paris	599
Transportation—all under three feet ride free in busses	593
Tricks—easy with handkerchief	641
Vision—new theory offered by Sir Oliver Lodge	634

Volcanoes—predict eruptions by study of averages	624
Wall—hollow, deadens sound more than sawdust	553
Washing Machine—speed-shift, does better work	590
Whaling—modern methods of	601
Windmill—"barn-door," harnesses the desert winds	591
Zoo—model mountain for goats	630

AMATEUR MECHANICS

Automobiles—Accessories—homemade gas vaporizer	684
Automobiles—Lighting—installing a backing light	679
Automobiles—Maintenance—care of doors	667
Automobiles—Radiators—conserving motor heat in zero weather	666
Automobiles—Tires—cover for tire padlock	665
Automobiles—Wheels—removing without a puller	673
Boats and Boating	
bell anchor for a small	683
outboard motor pleases youngsters	663
preventing loss of outboard motor	673
Camping	
combination shelter and sleeping bag	681
pocket first-aid kit	682
Cellar—warning signal for low beam in	680
Cleaning—dry, mixture	666
Door—simple holder for	681
Fish and Fishing—through the ice	680
Flower Stand—made from barrel hoops	667
Furniture—how to refinish your old	668
Gate—hinge makes good latch	682
Memorandum Pad—and holder	673
Mirror—handy for inspecting corners	680
Photographs—novel effects from snapshots	674
Photography	
enlarging small negatives	682
finder for photographs	666
Plants—making transplanting easier	683
Putty—soldering iron removes	679
Saws and Sawing—screw-slitting hacksaw blades	684
Signs—novel for roadside pop stand	679
Soldering—quickly made acid	680
Stoves, Gasoline—"ethyl gas" cannot be used in	683
Trees—how to grow dwarf	681
Wagon—toy speed	667
Water Bag—substitute for	684

SHOP NOTES

Acids—swab for applying	686
Aluminum—annealing small sheets of	688
Anvil—resurfacing farm	687
Automobiles—parts of car that are seldom lubricated	686
Automobiles—Painting—easy method of sandpapering	695
Bookcase—making a modern	696
Cement—strong, durable plaster-of-paris mixture	694
Concrete—old broom used in breaking	693
Drilling—simple tool for close	694
Farming—time and labor saving kinks for the farmer	700
Grain—box for fanning-mill screens and bags	692
Horse—adjustable wooden	689
Joints, Wood—for the amateur	690
Joists—nailing single-handed	694
Lathe	
preventing marks on work in	692
reducing speed of	688
sanding on the	685
Machine Parts—expanding and contracting circular	695
Milling Cutters—clearing of	693
Paints and Painting—rigging boatswain's chair	688
Photography	
large size electric printer	689
prints from wet negatives	692
Planer Bed—kink for	695
Pushcart—load-balancing	687
Putty—fire softens on sash	702
Saws and Sawing—metal rod at an angle	693
Springs—compressing heavy	688
Tape Line—kink for using	692
Windows—boxes anchored to cellar wall	695
Wood—making plastic filler for	702
Wrench—improvised ratchet	702

Your Guide to Home Study

SUCCESS— Will You Pay the Price?

IF you are normal, you want the comforts and luxuries which are the by-products of success—a home of your own—a new car—the leisure to read—the means to travel.

You want these things very much.

But—you are keen enough to perceive that experience and facility in handling *routine* work will never get them for you.

What, then, are you doing to gain that *specialized* experience—that *trained* ability—for which business firms are willing to pay real money?

* * *

During the past nineteen years more than 640,000 men have found the answer to that question in home-study training under the LaSalle Problem Method.

Evening after evening, they have seated themselves, to all intents and purposes, at the desks of men in high-salaried positions, and have squarely faced the *problems* of those positions.

Evening after evening, they have been shown the *principles* involved in the solution of such problems—and how those principles are applied by highly successful business houses.

Evening after evening, they have tackled concrete problems, lifted bodily from business life, and under the direction of some of the ablest men in their respective fields *have worked those problems out for themselves*.

That they have been *well rewarded* for their foresight and their earnestness is shown by the fact that during only six months' time as many as 1,248 LaSalle members reported salary increases totaling \$1,399,507—an *average increase per man of 89%*.

* * *

Many men, *knowing* what home-study training under the LaSalle Problem Method can do for them, nevertheless prefer to think that there's "nothing

in it." That's the excuse they make for their futures.

If you—knowing these facts—are content to drift, you will not profit by reading further.

If on the other hand you have imagination enough to *visualize* your goal—to actually see yourself in a home of your own, enjoying the comforts and luxuries of life—if, in short, you are a man of *purpose*, the coupon below may shorten your journey to success by many years.

Note, please, that the coupon names different lines of training and that it will bring you full particulars of the training which appeals to you, together with your copy of that most inspiring book, "Ten Years' Promotion in One"—all without obligation.

If you want success, and are willing to pay the price, ACT!

POCKET EDUCATORS

For all BUILDERS AND MECHANICS

Read Audels Pocket Educators for advancement and profit in your work. Every mechanic in the building trades should have this inside trade information at his fingers' ends. Learn the scope and possibilities of your profession. Any job can be done better if you are well informed. To earn more, learn more.

AUDELS CARPENTERS AND BUILDERS GUIDES—4 VOLS. \$6

Inside Information for Carpenters, Builders, Joiners, Building Mechanics—all Woodworkers. 1600 pages; 3700 diagrams; flexible pocket size. Short-cut instructions, new methods, ideas, solutions, plans, systems—money saving suggestions. An easy progressive course for the apprentice. A practical daily helper and Quick Reference for the master worker. A Helping Hand to Easier and Better Work and Better Pay. To get this aid for yourself, simply fill in and mail the FREE COUPON below.

INSIDE TRADE INFORMATION ON:

How to use steel square; How to file and set saws; How to build furniture; How to use mitre box; How to use chalk line; How to use rules; How to make joints; Carpenters' arithmetic; Mensuration problems; Estimat-

ing strength of timbers; How to set girders and sills; How to frame houses and roofs; How to estimate costs; How to build houses, barns, garages, bungalows, etc.; How to read and draw plans; Drawing up specifications; How

to excavate; How to use settings 12, 13 and 17 on the steel square; How to build hoists and scaffolds—skylights; How to build stairs; How to put on interior trim; How to hang doors; How to lay floors; How to paint.

"Audels Guides worth four times their price—handy too as I carry them in pocket for reference." W. J. Bates, Knoxville, Pa.

AUDELS PLUMBERS AND STEAMFITTERS GUIDES—4 VOLS. \$6

A new set—just out! A practical, illustrated, Reference Library and Study-Course for Master Plumbers, Journeymen and Apprentice Steamfitters, Gas Fitters and Helpers, Sheet Metal Workers, Draughtsmen, Master Builders, Engineers and all Building Trade Students. 1670 pages; 3642 diagrams; flexible; pocket size. Guides explain all the principles, advances and short cuts of the Plumbing and Heating trade. Contains instructions on how to figure and estimate jobs. Use FREE COUPON below to examine, without obligation, this valuable work.

INSIDE TRADE INFORMATION ON:

Soldering, tinning. Joint wiping, bending, beating. Pipe—iron—steel, threading. Mathematics, tables, physics. Materials—iron, steel, copper, brass, lead, tin, antimony. Sheet metal—galvanized—plate. Sanita-

tion, syphonage, tanks. Drainage, sewage, purification. Fixtures—bath—kitchen. Pipe fittings, soil pipe, tools. Laying out work. Roughing. Screwed fittings, flanges, joints. Pipe bending, examples. Elbows. Heating, ven-

tilation, refrigeration. Water supply, mains, wells, tanks. Gas-fittings. Underwriters. Sheet metal work, problems, methods, brazing, heating, lead burning. Welding, various welds, methods. Blacksmithing, forges, tools.

"Audels Guides are practical, easy to understand, reliable. Cover the field in plain language." W. F. Arminger, Annapolis, Md.

AUDELS MASONS AND BUILDERS GUIDES—4 VOLS. \$6

A new, complete, illustrated trade reference library, for Bricklayers, Cement Workers, Plasterers, Tile Setters and Stone Masons, including a practical outline of Steel Construction. 1100 pages; 2067 diagrams; flexible; pocket size. A practical Trade Assistant explaining modern methods of masonry construction. Easy to understand and apply. A reliable and authentic reference work and study-course for Master Journeyman and Young Mechanic. Use FREE COUPON below and find out for yourself, without obligation, whether this set will benefit you.

INSIDE TRADE INFORMATION ON:

Bricklaying, tools, materials; Brick designs, patterns, bonds; Setting frames and foundations; Mortars, scaffolds, estimating; Mortars and mortar mixing; Tile setting, mosaic, hollow tile; Straight edge test, trow-

eling; How to figure brick work; Safe loads, piers, chimneys; Boiler settings, anchors, fire stops; Labor tables; Concrete, forms; How to figure concrete work; Stucco—on old and new buildings; Plastering—wood lath—metal;

Plasterers agreement; Plastering on various surfaces; Stonemasonry; Cutting, finishing, estimating stone; Derricks, rigging; Steel construction; Fire proof; How to read blue prints.

"Audels Masons Guides are the best books on the subject. Have laid brick 12 years and am able to judge." H. A. Son-

PRACTICAL ELECTRICITY — 1 VOL. \$4

Audels Handy Book of Practical Electricity is a simplified Ready Reference and Study Course in one pocket size, leather bound volume—for Engineers, Professional Electricians and Students. 1040 pages; 2600 diagrams; flexible red leather bound. A reliable authority and handy helper for every electrical worker. Contains important and valuable wiring diagrams, calculations, machine sketches, helps on maintenance and repair. Use this FREE COUPON today and find out, without obligation, how this handy book will help you in your daily work.

Complete in one handy, red leather bound volume

INSIDE TRADE INFORMATION ON:

Electro-Therapeutics, X-Rays, Shocks, Welding, Brazing, Radio Hook-ups, Motion Pictures, Telephone, Telegraph, Cranes, Bells, Elevators, Pumps, Tools, Ship Drive, Railways, Vehicles, Automobile Electric Systems, Ignition, Generation, Lighting, Plant Management, Power Plans, Armature Winding, Repairing, A. C. Motors and Apparatus, D. C. Motors and Apparatus, Alternator Construction, Dynamos, Wiring Diagrams, Sign Flashers, Cable Splicing, Power Wiring, Outside Wiring, Switches, Lighting, Rectifiers, Converters, Transformers, Fuses, Circuit Breakers, Rheostats, Electro Plating, Electrolysis, Storage Batteries, Magnetism, Electrical Energy, Conductors, Insulators, Static, Dynamo, Radio Electricity, Applications, Ready Reference and Index Covering the entire field of Modern Electricity.

Learn More and You Will Earn More!

Know your job and you'll never be without one. The skilled man is always in demand. Knowledge is power. Learn your trade thoroughly by easy reading. This coupon is your opportunity for advancement and better pay. You risk nothing in sending for Audels Guides for free examination. Send it NOW!

LEARN AUTOS

at Home Make Money QUICK!

Like Jacob R. Siemens Did

\$2.90 a day was Siemens' pay before writing for my FREE Auto Book. 1½ months after sending coupon like the one at the bottom of this ad, he started making \$9.00 a day. Get my FREE Auto Book like Siemens did! Read his own letter. See how you, too, can make money quick in this wonderful Auto Business.

Earn up to \$100 a Week!

Stop selling your time for low pay! You don't have to! Now you can get complete instruction covering everything about Auto work—at home—in your spare time—just like Siemens did. Don't envy the Auto Expert's BIG PAY. Training, not luck enables him to earn from \$50 to \$100 a Week. Quit wasting your life by slaving away at dull, monotonous work with no future. Get into the great Auto Business—where extra money, big pay and raises come QUICK! Get my FREE Auto Book and see how I can help you get in line for a big money job. Clip the coupon before you turn this page.

The Auto Business Needs YOU

Never before was the demand for trained men—real Auto Experts, greater than today! And no wonder, with nearly 25,000,000 cars on the street requiring constant service! Just think of it!—car owners spend over FIVE BILLION Dollars every year for upkeep and repairs. Get your share of this money. Clip coupon and see how quickly and easily you can prepare for an Expert's Job and Expert's PAY.

No Previous Experience Necessary

I don't care where you live or what you're doing now. I don't care if you don't know the first thing about Autos. I don't care

how little schooling you've had. If you're over 15 and under 55—if you like Autos and can read and understand plain, ordinary words—send for my FREE Book. See how I've trained men by the hundreds—fitted them for good jobs—prepared them for brilliant futures—helped them get into business for themselves and make money from the very start.

"Job-Way" the Quick Way to BIG PAY

Clip coupon today for my FREE Auto Book and learn how scores of "Job-Way" students start right in getting raises in pay and earning big. Extra, spare-time money, while training—without quitting their present jobs or leaving home. I teach you how to start making money QUICK—not in six months or a year but in just a few short weeks after you start training.

Clip Coupon for Details of My Offer

Get all the facts about this new, easy "Job-Way" Training that has helped hundreds of men to get into big money jobs. Find out about my Employment Service—free to students—my Consultation Service, my Auto Magazine, the 3 Big Outfits and many other features you get without extra cost. Send for FREE Book today.

“What would I do if I lost my job?”

WHAT *would* you do? What would your wife and children do?

Suppose your employer notified you tomorrow that he didn't need you any longer? Have you any idea where you could get another position?

You wouldn't have to worry if you were a trained man. You wouldn't have to spend your mornings reading the “Want Ads” and then trudging from place to place, meeting rebuffs and discouragements, piling up bills, finally willing “to do anything” if only you could get on somebody's payroll.

Don't have this spectre of unemployment hanging over your head forever. Train yourself to do some one thing so well that your services will be in demand. Employers don't discharge such men. They *promote* them!

Decide to-day that you are going to get the specialized training you must have if you are ever going to get a real job and a real salary. It is easy if you really try.

Right at home, in the odds and ends of spare time that now go to waste, you can prepare for the position you want in the work you like best. For the International Correspondence Schools will train

you just as they are training thousands of other men—no matter where you live—no matter what your circumstances.

At least find out how, by marking and mailing the coupon printed below. There's no cost or obligation, and it takes only a moment of your time, but it may be the means of changing your whole life.

Mail the Coupon To-day!

Do Unseen Hands Keep You Dumb.. *When You Ought to Talk?*

How often have you wanted to talk, but held back, silent, because you felt unequal to the other people present? How many times have you passed up, or avoided the chance to talk in public—before your business associates, your club or lodge, because of your fear of stage fright? Are you afraid of your own voice—instead of being able to use it as one of the greatest business and social assets in your possession? And yet you might be surprised to hear that many of the most brilliant public speakers we have today felt exactly this way—before they learned how to develop their "hidden knack" of powerful speech—a knack which authorities say seven men out of every ten actually possess. And the chances are that you, too, have in you the power of effective speech—which, if unloosed, would be almost priceless to you in a social or business way. Find out if you have this natural gift—read every word of the message below.

Discover These Easy Secrets of Effective Speech

PROBABLY you have never pictured yourself being able to sweep a giant audience off its feet—to win the applause of thousands. Yet, the men who are doing such things know that it is all astonishingly easy once you are in possession of the simple rules of effective speech. Before you learn these secrets you may be appalled at the thought of even addressing a small audience. Still it all seems so ridiculously easy when you know how to banish stage fright, and exactly what to do and say to hold an audience of one or a thousand in the palm of your hand.

Yet what a change is brought about when a man learns to dominate others by the power of effective speech! Usually it means a quick increase in earnings. It means social popularity. You yourself know how the men who are interesting talkers seem to attract whomever they wish and name their own friends—men and women alike.

There is no magic, no trick, no mystery about becoming a powerful and convincing speaker—a brilliant, easy fluent conversationalist. One of America's eminent specialists in effective speech has developed

a method that has already raised thousands from mediocre, narrow runs to positions of greater prestige and wider influence. This new method is so delightfully simple and easy that by spending 20 minutes a day in the privacy of your own home you cannot fail to make rapid progress.

How you can use this method, how you can banish stage fright, self-consciousness and bashfulness, quickly shaping yourself into an outstanding influential speaker, is told in an interesting book, *How to Work Wonders with Words*. Not only men who have made millions but thousands of others have

sent for this book and highly praise it. You can receive a copy absolutely free by simply mailing the coupon below. Act now to discover your priceless "hidden knack"—the natural gift within you. Fill out and mail the coupon at once.

What 20 Minutes a Day Will Show You

How to address business meetings.
How to propose and respond to toasts.
How to make a political speech.
How to tell entertaining stories.
How to write better letters.
How to enlarge your vocabulary.
How to develop self-confidence.
How to acquire a winning personality.
How to strengthen your will power.
How to be the master of any situation.

LEARN ELECTRICITY

Say Fellows!

Let me tell you in my big Free book how I can quickly train you for jobs leading to salaries of \$60.00 to \$200.00 a week. **NOT BY CORRESPONDENCE. NOT BY BOOKS.** But, I'll train you in 90 days on real electrical equipment. You don't need advanced education or previous electrical experience. If you're short of money you can **earn while learning.** After you graduate I'll give you free employment service for life and as often as you want it. To all those enrolling now I'll include my big New Aviation Course as well as my Radio and Auto Ignition course.

**H. C. LEWIS—
President**

Mail the coupon today for your copy of this big Free book. It tells you an amazingly easy way to get into a big new field. Sincerely

H. C. Lewis

5 Easy Ways to Make \$3.00 an hour in Your Spare Time in RADIO

Each of these plans, developed by the Radio Association of America, is a big money-maker. Set owners everywhere want to get rid of static, to have their sets operate from the electric light socket, the tone improved, and the volume increased, and transformed into single-dial controls. Phonograph owners want their machines electrified and radiofied. If you learn to render these services, you can easily make \$3.00 an hour for your spare time, to say nothing of the money you can make installing, servicing, repairing, building radio sets, and selling supplies.

Over \$600,000,000 is being spent yearly for sets, supplies, service. You can get your share of this business and, at the same time, fit yourself for the big-pay opportunities in Radio by joining the Association.

Join the Radio Association of America

A membership in the Association offers you the easiest way into Radio. It will enable you to earn \$3.00 an hour upwards in your spare time—train you to install, repair and build all kinds of sets—start you in business without capital or finance an invention—train you for the \$3,000 to \$10,000 big-pay radio positions—help secure a better position at bigger pay for you. A

membership need not cost you a cent.

The Association will give you a comprehensive, practical, and theoretical training and the benefit of its Employment Service. You earn while you learn. Our cooperative plan will make it possible for you to establish a radio store. You have the privilege of buying radio supplies at wholesale from the very first.

Earned \$500 in Spare Time
Frank J. Deutsch, Penn.: "I have made over \$500 out of Radio in my spare time."

Radio Engineer in One Year
Claude DeGrave, Canada: "I knew nothing about Radio when I joined a year ago. I am now a member of a very exclusive organization of Radio Engineers, and my income is 225% greater than it was."

Doubles Income in 6 Months
W. E. Thon, Chicago: "Six months after I enrolled I secured the management of large Radio store and doubled my income."

Radio Association of America, Inc.
Dept. PM-4, 4513 Ravenswood Ave., Chicago

Gentlemen: Please send me by return mail full details of your Special Membership Plan, and also copy of your Radio Handbook.

ELECTRICITY!

Fastest Growing, Best Paying Industry on Earth—Has a Place for You

SALES JOBS
RADIO JOBS

ELECTRICAL OFFICE JOBS—POWER PLANT JOBS—ELECTRIC AUTOMOTIVE JOBS—BATTERY JOBS
ELECTRICAL DRAFTING JOBS—MANUFACTURING JOBS—AVIATION JOBS—STORE JOBS
ELECTRIC RAILWAY JOBS—TELEPHONE AND TELEGRAPH JOBS—BUILDING CONSTRUCTION JOBS—SWITCHBOARD JOBS—SIGNAL JOBS—ELECTRIC LIGHT JOBS

EXACTLY THE KIND OF JOB YOU WANT

Get my Contract of a **JOB and a RAISE!**

So when I say "*ELECTRIFY your future*" I mean here's the winning combination: Add a knowledge of Electricity to what you have already learned in factory or office or store. Then take that knowledge into *ELECTRICITY*—where you can sell it for a *bigger salary and a brighter future*.

An Electrical Job and Raise for You

Send for our agreement to take you as you are, supply you with the Electrical training you need, and then help you get a fine Electrical position at a substantial increase in salary, or no cost. You may wonder how this is possible. But the explanation is really simple: The Electrical industries are growing so rapidly that the supply of trained men cannot keep up with the demand. There are more good jobs open, always, than men capable of filling them. We are in close touch with many big employers and they tell us they can place all the trained men we can supply.

And because we know all this, and how amazingly Electricity continues to grow into new fields, and because we know the *right kind of training* equips a man to get and keep a good Electrical job—we have dared to make this contract and to back it with our entire resources of over \$2,000,000.00. Get in touch with me, and I'll show you that you can get an Electrical job and a raise—without risking a penny of your money.

All These FREE

Mail the coupon below, and without cost or obligation I'll send you our 36-page book about Electricity—our famous plan and contract of an Electrical Job and Raise—and some of the first lessons and job-tickets, as a sort of "sample" of the new, easy, simplified way you can learn Electricity—right in your home, in spare time. Do this now, while you think of it.

THE AMERICAN SCHOOL,

Dept. E-474, Drexel Ave. & 58th St., Chicago, Ill.

I am interested in Electrical position. Please send without cost or obligation:

1—36-page Electrical Book. 2—Contract of Electrical Job and Raise. 3—Bunch of Lessons and Job-tickets to show me how easily I can prepare for Promotion in Electricity.

Name

WANTED

**Mechanics, Office Men—
Beginners, Clerks—at once
for promotion in *ELECTRICITY***

Most of us think of Electricity as dealing entirely with the manufacture of machinery, the production and transmission of power, and work like that of the "Electrician."

Perhaps you do not realize that Electricity has become the biggest, and the fastest-growing industry on earth. That it is a *HUNDRED* giant industries, not one—employing *MILLIONS* of men and *BILLIONS* of dollars in capital. With positions for office men, salesmen, draftsmen, building-construction men, engineers and executives. And that it has a *place for you*—no matter what kind of work you are doing today, or prefer to do!

ELECTRIFY Your Future! Earn \$35 to \$100 a Week!

I am looking for ambitious young men who are dissatisfied both with their present pay and future prospects. I want to show them how easily they can get into Electricity—how they can increase their earning capacity and multiply their chances to get ahead *many times*—simply by switching over to *similar* work in Electricity.

Perhaps you are doing routine *office work* today in a line where your progress is slow and limited. Then let me show you how you can get one of the many office positions in the Electrical line. And how, with your present business experience, *plus a knowledge of Electricity*, you can earn a much bigger salary and advance rapidly to highly-paid executive positions.

Or if you are a mechanic—wondering how you can avoid remaining a mechanic all your life—I'll tell you how to become first an *Electrical* mechanic, and then show you how you'll be in line for quick promotion to Expert, Engineer or Superintendent.

THE AMERICAN SCHOOL

Dept. E-474, Drexel Ave. & 58th St., CHICAGO, ILL.

1 inch to your biceps 2 inches to your chest *in* **7½** *hours*

A marvelous system of muscular education that transforms weaklings into strong men almost overnight. . . .

This is *not* a fish story. It's a fact! When I say I can add one whole inch of real live muscle to each of your arms and two whole inches of the same wonderful strength across your chest, in just 7½ hours, I mean just that.

But I don't stop there. I do things with your body that even you never dreamed of. My business is to build muscle, and the health and strength that always come with muscle. In the past 19 years I've taken over 200,000 puny little underdeveloped bodies—coaxed them along—worked on them—filled them with new life—new hope—new terrifying strength that turned their owners into powerful, fighting, proud he-men. And how simple it all is under my instruction!

Here's How I Do It!

All I ask of you is 7½ hours of your spare time, divided into 15 minute periods for 30 consecutive days. In those 15 minute periods you are to do exactly as I advise, using the apparatus I send you. At the end of the 7½ hours step before your mirror, and marvel at the transformation.

Could that great, handsome figure be yours? Those huge broad shoulders—that immense barrel-like chest with its powerful lungs—those tremendous arms and wrists, ready to crush everything before them—could it be possible?

Yours it can be—and quickly, too. But first send for my new 64-page book. Let me show you how such a body can be yours without risking a single penny. How my ironclad guarantee absolutely protects every single pupil. Send for it today. Get going to new health—new happiness—new joys now!

EARLE LIEDERMAN—The Muscle Builder
Author of "Muscle Building," "Science of Wrestling,"
"Secrets of Strength," "Here's Health," "Endurance,"
etc.

Send For My New
64 Page Book
"Muscular Development"
IT IS FREE

The Earle Liederman System of Physical Education has been approved as a Correspondence School under the laws of the State of New York.

Do you get that? It's free. I don't ask a cent. It's yours with my compliments. Take it and read it. It's the peppiest piece of literature you ever flashed your eyes on. And 48 full-page photos of myself and some of my numerous prize-winning pupils. This is the finest collection of strong men ever assembled into one book—look them over—doctors, lawyers, merchants, mechanics and every line of trade you can think of. I swear you'll never let this book get out of your hands again. And just think—you're getting it for nothing. Don't hesitate—no strings attached to it. Grab it.

Take your pen or pencil and fill out the coupon, or even your name and address on a postal will do—do it now before you turn this page.

This Astonishing Book Showed Him How

How One Man Uncovered Hidden Possibilities He Never Suspected Within Himself and Raised His Yearly Income \$8,080! An Illuminating Message of Vital Interest to Every Man Who Ever Aspires to Earn \$10,000 — \$20,000 — or More a Year! SEE FOR YOURSELF This Remarkable Volume That Has Led So Many Men Into the Five-Figure Salary Class!

Where Shall We Send Your Copy....FREE?

TRUTH is stranger than fiction! And the true story that happened to R. B. Hansen proves it! His experience is not only intensely INTERESTING—but it will prove a revelation and positive inspiration to every ambitious man who reads this page.

Not long ago Hansen was working as a foreman in a rubber plant. His salary was \$160 a month. That meant skimping and petty economies that are bound toirk ANY ambitious man. Naturally he was keenly dissatisfied—but like so many other men caught in blind-alley jobs, he didn't know how to get out!

And then one day something happened! A certain book fell into his hands. Between its covers he discovered a certain force that eventually led him to rewards beyond his fondest expectations. Inspired to action and with his feet firmly guided to the first rungs of the ladder to Success, Hansen went into business for himself. And within a short time he had boosted his earnings to \$10,000 a year!

Your Income Multiplied Or You Pay Nothing

N. S. T. A. is now offering, to every man who wants to increase his income, an amazing Double Money-Back bond that assures you a definite stipulated addition to your income, within three months after your training is completed—or the course costs you nothing. This daring offer is possible only because of the success of thousands of members. Send coupon immediately for full details.

not only that, it outlined a simple plan that will enable almost any man to master scientific salesmanship without spending years on the road—without losing a day or dollar from his present position.

Free to Every Man

If we were asking two or three dollars a copy for "The Secrets of Modern Dynamic Salesmanship" you might hesitate. But it is now FREE. We cannot urge you too strongly to take advantage of this opportunity to see for yourself what salesmanship has done for others—and what the National Salesmen's Training Association stands ready and willing to do for you. Find out exactly what the underlying principles of salesmanship are—and how you can put them to work for you. No matter what your opinion is now, "The Secrets of Modern Dynamic Salesmanship" will give you a new insight into this fascinating and highly-paid profession. Mail the coupon now!

Salary Increases—200% to 900%!

A lucky accident? Not a bit of it! Hansen is not alone in his achievement of success after reading this remarkable book. OTHER men who have increased their salaries amazingly after reading these vital facts are numbered in the thousands! For example, C. W. Birmingham of Ohio read it and his salary raised from \$15 a week to \$7,500 a year. Wm. Shore of California made \$3,000 his first 5 months. And O. D. Oliver of Oklahoma, who used to earn \$200 a month, now makes as much as \$1,000 in a single week!

How did they do it? What did the book show them? Just this:—Every one of these men realized that Salesmanship offers BIGGER rewards and delivers them QUICKER than any other line of work under the sun. This vital book, "The Secrets of Modern Dynamic Salesmanship" introduced them to hundreds of surprising and little-known facts about the highest paid of all professions,—SALESMANSHIP. It blasted dozens of old theories, explained the science of selling in simple terms and told them exactly how the great sales records of nationally-known star salesmen have been achieved. And

"Must have had a Big Raise," eh, Bill?

NO WONDER ED, the Receiving Teller down at the National Bank, was curious. This was the fifth Monday in succession I had made a big EXTRA deposit. By "big" I mean \$20 to \$25 more than I usually banked each week. And Ed noticed that I was dressed better, too!

He wondered where I was getting all the Extra Money

"You bet I had a big raise," I answered. "In fact I gave myself one!" "What do you mean," asked Ed, still puzzled. "Just this, Ed, I'm a professional TENOR BANJOIST three nights a week—playing in Harry Smith's Dance Orchestra, at \$10 a night! Believe me, it's the easiest money I ever earned, too." "You, a paid musician!" exclaimed Ed. "Why, I didn't know you ever touched a string!"

Six Months ago I was Lonely—Six Months ago I was Poor!

"Well," I said, "one night I was sitting at home feeling lonely and blue—wishing for more good times and more money to spend. Picking up a magazine I just happened upon an ad about a new way of learning the TENOR BANJO at home. It said anyone who could read English could learn to play. I had no idea I could—always thought those things were just for a few 'talented' folks. But I was sick and tired of being 'on the outside,' so I said to myself, 'I'll

send for their Free Book, anyway.' Guess you can tell from my face and my bank book that I'm mighty glad I did, Ed! That Course sure taught me quick. Then Harry Smith heard me playing one night at a party. It was only two months after I started, but right away he offered me a spare-time job with his Orchestra. And he'll soon be able to use me steady, six nights a week—at \$70 a week. That's twice what I'm making down at the Freight Office. I can't really call playing the TENOR BANJO 'work.' It's FUN!—every minute of it. And it's better than having a rich uncle."

The Same Opportunity is Yours—Right Now!

Never mind if you've never played a note in your life. This new method can make you a popular, high-paid Tenor Banjoist in a few short weeks. The Coupon below brings your Free copy of my book, "The Play-Way to Popularity and Big Pay." It tells how thousands of others have succeeded, just as Bill did—just as YOU CAN! Send for it right NOW—today!

Big Pay Jobs for You in ELECTRICITY

You Learn by Seeing it Work

NOW you can fit yourself for a big pay job in electricity by watching real motion pictures in your own home! Easy and fascinating as seeing a show at the theater! You see electrical machinery *in operation*. Moving diagrams make all the facts easy to understand.

This New Way is Easier, Quicker, Surer

At home, in spare time, you can fit yourself to make more money in electricity. This giant industry is constantly calling for men to fill jobs paying from \$70 to \$200 and more weekly! Practical electrical men, holding down big jobs, praise this new way, *as the easiest and best way to learn how to do electrical work.*

You Get this DeVry \$75 Projector

Every student is given a standard school model DeVry Motion Picture projector to keep, at no extra cost. Thousands of feet of motion picture film are supplied for use during the course. You show them on the wall or on a screen in your home. *Projector is so simple anyone can operate it without experience.* Used with regular light socket, farm lighting equipment, or automobile battery. Think of it, you own a projector for showing all kinds of movies right in your own home!

What a Practicing Engineer Says:

"I am amazed at how clearly and simply you explain the facts about electricity. The points are so much easier to grasp than by the usual instruction methods that the student must make quicker, surer progress. This is by far the best method of getting thorough preparation for practical electrical work." Charles E. Fitz, M. E., E. E., formerly associated with Steinmetz.

Film-Way Trained Men in Demand

"We will gladly co-operate with you, not only in employing your students when vacancies occur in our organization but also by recommending that our employees take your course."

Electric Material Co., South Bend, Ind.

Representatives with School Experience Write

You Get This Pledge in Writing

We promise in writing to give you the training and employment service necessary to get you a better job and more money *or you need not pay a cent.*

BARBERING or BEAUTY CULTURE

Easy to Learn — Quick to Earn
Right now we will give any man or woman
 —of limited means and education— all of the
 advantages of the so-called higher professions
 and in a few weeks rather than a few years.

State Laws make it More Difficult—You Must Act at Once

Soon every State in the Union will have Laws making it impossible to learn this work without a high school education—health certificate—longer period of training—greater expense, etc.

CLEAN INSIDE WORK—

The glowing warmth of a clean, interesting, inside position with every Saturday night your Pay check—twice the size of your present salary, or your own business in any city or hamlet, or travel and see the world, all yours if you register now, while you can qualify.

William McClintock, former President Master Barbers' Ass'n and proprietor of the highest priced rented shop in the world, says, "My son, who learned at Moler's, is top man in my shop every week. I gladly recommend the Moler System as the proper place for men to become successful barbers."
 —WM. MCCLINTOCK.

SEE how the drift for better personal appearances throughout the world has made barbering and beauty culture a **BILLION DOLLAR BUSINESS.**

See how bad weather lay offs, strikes, crop failures, shut downs, lock-outs, etc., are absent from barbering and beauty culture. I can put you into one of my colleges established convenient to you no matter where you may now be located.

The call is constant and under state restrictions becoming more urgent but for you the opportunity without capital or education is right now. Opportunity doesn't wait.

IF YOU HAVE IN MIND—

Aviation, Nursing, Drafting, Electricity, Dramatics, Music or any other Profession, Saturday work alone in barbering or beauty culture will earn a scholarship and a living during the years necessary to acquire it and I can give it to you in a few weeks.

See the Extract from a Daily:

Every State is Advocating the Same

Lincoln, Neb., Jan. 24 (AP).—A bill which would raise the standards of barbering and beauty culture in Nebraska and place these colleges on a plane with institutions of higher learning was introduced in the senate today by Senator Brazda of West Point.

His measure would amend the present state barber law by providing that no school shall be approved unless all of its students are graduates of four-year high schools.

Learn Electricity IN LOS ANGELES

—and learn IT RIGHT!

1. What Kind of School is National?

A practical-technical school, established in 1905—24 years ago—recognized throughout the electrical industry as one of America's foremost trade schools. National offers intensive courses in all electrical branches. Thorough training of the highest quality in fundamentals of electricity, mathematics, physics, and other essentials. Extremely practical electrical experience in completely equipped, modern work departments assures you success in the profitable electrical trades.

2. How Long to Learn Electricity?

A LIFETIME—and then you'll never know it all! BUT—to become properly qualified in the shortest practical time, without sacrifice of quality in instruction or endangering your chances for securing satisfactory employment in electricity, National's condensed course of nine months fully trains you as a Practical Electrician.

3. What Employment Service does National Guarantee?

National GUARANTEES to qualify you as a Practical, Competent Electrician and to render an unlimited Employment Service to students wishing to earn living expenses while learning and graduates ready to enter the electrical field, which is the most any school can be expected to do.

4. What Inducements Does National Offer?

National offers YOU the very best technical - practical training that money can buy at a cost within every man's reach. It does not offer to pay your railroad fare, room and board or other personal expenses, preferring to limit its activities to the PROPER TRAINING OF MEN FOR SUCCESS. Los Angeles is in the heart of rapid electrical development—an ideal city in which to study and prepare for success in Electricity.

SCISSORS FOR FREE BOOK

"Why, Bill—here's an extra \$20!"

"Yes, Betty, I've had another raise! Twenty dollars—think of it! That's a thousand more a year. We can have the new furniture now, dear, and save more than ever, besides. You certainly were right about that International Correspondence Schools Course. You said I'd make some headway, once I had the training. And studying at home in my spare time wasn't hard, either.

"Remember, I said the Boss had been talking to me about technical points, and that I was able to answer his questions? He told me today that the I. C. S. people had written him about my course. He's been watching my work, and he decided this week that I was ready for promotion.

"This is only the start, dear. Nobody can stop me now, for I've got the training to handle my job and the job ahead."

Thousands of I. C. S. students are earning promotion and increased pay through spare-time study. Your employer is watching you. If he sees you have the training for a bigger job, you'll get it.

One hour a day, spent with the I. C. S. in the quiet of your own home, will prepare you for success in the work you like best. Put it up to us to prove it.

FIND OUT HOW

Easy it is to Make
\$4,500 to \$12,000 a Year

Learn to read Blue Prints this amazing new way! Get into the world's richest industry—Building! See how quickly and easily you can train to make \$4,500 to \$12,000 a year! My FREE Book "How to Read Blue Prints" discloses all the so-called "mysteries" of Blue Print Reading—also gives some startling facts about the nine best jobs in America. Don't send one penny—just mail the coupon!

NO longer need you spend years trying to pick up the "mysteries" of Blue Print Plan Reading. For now a quick, sure practical method has been perfected that has made thousands of men Blue Print Experts in a surprisingly short time.

This is no ordinary "school course." It is practical from start to finish. It is based on many sets of real Blue Prints—plans that would cost thousands of dollars if purchased from architects. Twenty famous experts in all lines of construction work talk over these Blue Prints with you in plain simple language. Show you every detail. Explain every short cut. Tell you the "secrets" of quick, accurate estimating. Explain Superintending. Give you for the first time many inside facts and money-making methods used by the "Giants" of the Building Industry.

This is the kind of training that quickly puts men into \$4,500 to \$12,000 a year jobs—or into profitable contracting businesses of their own. Yet now you get it right at home in only 2 or 3 months. It requires no extensive education. If you can read and understand what is written here you can easily master it.

See what this training has done for others: Bartholomew, Calif., became a contractor at an in-

crease of over 300% his first year; Blair, Okla., stepped up to Superintendent at 100% increase; Dickerson, R. I., increased his salary 700% in 12 months; Marchand, La., says: "My income has increased 200% and I now have more contracting work than I can do."

Over seven billion dollars will be spent this year in new construction! No wonder then, such tremendous opportunities are open to you when you have this "head-work" training in Blue Prints. If you want more money—real big money! Then choose a "Blue Print" job in Building, Clerk or Salesman, Carpenter or Bricklayer, here is the one field where there are unlimited opportunities for advancement.

So accept my FREE gift of a complete set of real working Blue Prints, and my fascinating Book "How to Read Blue Prints" that tells all the interesting and instructive facts about Blue Print Plans. Don't send one penny—pay no C.O.D.—It's all FREE. Just fill out and mail the coupon today—NOW!

No alibis *now* for not learning to play!

"-AFRAID TO BEGIN"
 "IT'S TOO HARD - TAKES TOO LONG"
 "I DON'T KNOW ONE NOTE FROM ANOTHER"
 "I DON'T LIKE THE IDEA OF A PRIVATE TEACHER"

Easy as A-B-C to become a popular musician on any instrument this "no teacher" way

WHY let your imagination run loose and keep you from becoming a popular musician? Haven't you heard that there is a way of learning to play your favorite instrument in a few short months? Without taking lessons from a teacher! Without paying expensive fees! Without any tiresome technique or dry-as-dust exercises to struggle through—a way that has been vouched for by over a half-million people in all parts of the world!

The U. S. School of Music has completely removed all the difficulty, boredom and extravagance from music lessons. It has made the reading and playing of music so downright simple that you don't have to know one note from another to begin.

It's So Easy!

Your own home is your studio. The lessons come to you by mail. They consist of complete printed instructions, diagrams, and all the music you need.

You study with a smile. For instead of just scales you learn to play real tunes from actual notes—right from the very first lesson on. And you're never in hot water. First, you are *told* how a thing is done, then a picture *shows* you how, then you do it yourself and *hear* it. No private teacher could make it clearer or easier.

"Goodbye Blues"

Sooner than you realize you will be bringing cheer to the folks at home with your playing. Gradually you gain confidence and professional expression. Then parties, popularity, orchestra work follow in short order. You'll know how good it feels to be out of the wallflower class and into the whirl of things . . . to be able to provide musical enjoyment for others whenever you are called upon.

The abundance of joys that music can bring into anyone's life is now yours to share. Let the time-proven and tested U. S. School home-study method help you to increased pleasure and financial gain. Bear in mind no matter which instrument you select—the cost of learning in each case will average the same—just a few cents a day!

Pick Your Instrument

Piano	Piccolo
Organ	Cello
Violin	Sight Singing
Drums	Ukulele
and	Hawaiian
Traps	Steel Guitar
Guitar	Clarinet
Mandolin	Flute
Harp	Saxophone
Cornet	Trombone
Voice and Speech Culture	
Automatic Finger Control	
Piano Accordion	
Banjo, (Plectrum, 5-String or Tenor)	

Free Book and Demonstration Lesson

Our wonderful illustrated Free Book and our Free Demonstration Lesson explain all about this remarkable method. They prove just how anyone can learn to play his favorite instrument in half the time and for just a fraction of what old slow methods cost.

If you really want to learn to play—if new friends, good times, social popularity, and increased income appeal to you—take this opportunity to make your dreams come true. Now! Sign the coupon and send it before it's too late. Instruments supplied when needed, cash or credit. U. S. School of Music, 74 Brunswick Building, New York City.

U. S. SCHOOL OF MUSIC

There's the Man Who's Holding You Down

Yes, sir! There's the man! You see him every time you look in the mirror. His name isn't Brown or Smith or Jones but Y-O-U. He's your real boss. He's the man who decides whether your salary will be \$35 a week or \$100 or \$150.

If you want to get ahead there's just one sure way to do it—train yourself to do the day's work better than any other man in the office. Ability is bound to count. Your employer will be glad to pay you more money if you show him you *deserve* it.

A home-study course with the International Correspondence Schools will prepare YOU for the position you want in the work you like best. All it takes is an hour a day of the spare time that now goes to waste.

At least find out how by marking and mailing the coupon that has meant the difference between Failure and Success to so many other men. It doesn't obligate you in any way to fill in this coupon, yet it may be the means of changing your entire life. *Do—it—now!*

EARN MONEY IMMEDIATELY—WE FURNISH EQUIPMENT TO START!!

MUSIC LESSONS IN YOUR HOME

We have placed machinists, carpenters, masons, plumbers, railroad men, office clerks, farmers and even laborers in fine Drafting Jobs under this plan. Mail coupon for details of our remarkable offer.

Men Who Work With Their Hands Make the Best DRAFTSMEN

and We'll Back Them With This Contract of a DRAFTING JOB and RAISE!

"Only one other man and I, of six taking California State Board examination for Architect needed. Then I realized the thorough and practical training given by American School. In 18 months I have gone from tracer to Chief Draftsman, in charge of all architectural and engineering work in one of the oldest offices here." R. L. WARREN, Los Angeles, Cal.

"When I started American School training in the Spring of 1915 I was working 14 hours a night, seven nights a week for \$1.83 a night. That Fall I got a job in the Engineering Dept. of a large firm near here. Today I work 8 1/2 days a week and my salary is larger than I ever dreamed of when I began that course in Mechanical Drafting." B. H. SEAVERN, South Bend, Ind.

We are looking for more ambitious young fellows with factory, building-trade or any other kind of mechanical experience to prepare for and help place in well-paid Drafting positions. Such men, we find, are unusually successful as Draftsmen, because they know how things are done, and that's a priceless asset to the man who makes the blueprint plans. For there's a great deal more to Drafting than "mechanical drawing" and reading blueprints. The real jobs, those paying \$50 to \$100 a week, give you a chance to cash in on your entire past mechanical experience. Get in touch with me and I'll tell you how.

DRAFTING Is Logically YOUR NEXT MOVE!

Of course you realize the biggest handicap to mechanical work is that you're limited in earning capacity to the output of your two hands, as long as you live. Even the skilled mechanic earning \$30 to \$60 a week has reached his limit. He can never earn more and when he gets old he will earn less. So I don't blame any man for wanting to get away from his futureless outlook. For wanting to get into something where he can use his head as well as his hands—where he will be paid for what he knows, instead of only for what he does. . . . You know enough about blueprints to understand that PLANS govern every move in factory and construction job. The Draftsman who makes them is several jumps ahead of the workman who follows them. And so I want you to know that DRAFTING is a logical, natural PROMOTION from mechanical and building work—better-paid, more interesting—just the kind of work you'd enjoy doing.

Get My NO-RISK Plan

The way to a fine Drafting job for you—is easier than you think. It takes no "artistic talent" or advanced education. Thousands of men no smarter than you, with no more education or ability have learned it quickly and you can, too. With the co-operation of some of the biggest employers and engineers in the U. S. we have worked out a plan to prepare you for Drafting work in your spare time at home—to actually help place you in a fine position and to raise your pay. Backed by the guarantee shown above to refund the small cost, if we fail. Mail the coupon and I'll be glad to tell you all about this life-time chance to get into Drafting.

The American School

Dept. D-474, Drexel Ave. and 58th St., Chicago, Ill.

3 Drafting Lessons Actually FREE

To Show You How Interesting
and Simple Drafting Is . . .

I wish I had the room here to tell you all about DRAFTING—how it has become the most important branch of every kind of manufacturing and construction work—how fascinating the work is—what a fine bunch of fellows Draftsmen are, the big salaries paid—how while Drafting is white-collar office work, it is closely hooked-up with big projects and big men. All that takes a 36-page book to tell and I'll be glad to send it to you free, and in addition I want to send you the first three lessons of our home-training so you can see how you'll like the work and how simple it is to learn. Coupon brings everything—mail it right away.

Thousands of men have each paid \$2.00 in cold cash for this great flying hand-book, but you can have one WITHOUT COST if you act promptly. Mail coupon, send no money.

AUTO

5 AUTO BOOKS SENT FREE!

AVIATION for BEGINNERS!

256 pages, 140 illustrations, 600 questions and answers on aviation. Everything about ships and flying explained in simple language, pictures and diagrams. All aeronautical terms explained. Airplanes and airships, balloons and dirigibles. Elementary aerodynamics, how an airplane flies, airplane parts and functions, fuelage forms, landing gear, wing design and construction, power requirements, airplane engines, propellers, equilibrium and control, etc., written in lesson form. Prepares for positions in ground-work, paves the way for flying. The most instructive and interesting book on aviation on the market.

Mail the coupon and we will send you a set of these remarkable auto books, just off the press. Whether you are mechanic or helper, expert or student, owner or driver—if you're interested in autos by all means take advantage of this opportunity to see and USE the latest and most complete reference work on autos ever published. Built by eighteen of America's greatest Automotive Engineers. So simple, so clear, so fully illustrated with pictures, charts, diagrams and blue prints that even men with little schooling can understand every fact. Yet in daily use by thousands of engineers, service-station superintendents and shop foremen as the most dependable reference encyclopedia available. The new edition includes straight eights, four-wheel brakes of all types, high compression engines and other features of the newest models. 5 volumes, 2400 pages, over 2000 illustrations, charts, diagrams and blue-prints.

Can You FIX IT?

These Books Tell HOW!

The ten-billion-dollar a year auto industry offers rich prizes to men with gumption enough to really learn all branches of Automotive mechanics. A better job—bigger pay—the chance to go into business for yourself and get a share of the huge profits, are waiting for any man who even half tries to improve his ability to deliver service. And here's the quickest, easiest, cheapest way—no studying, no memorizing, no "lessons" or examinations. At a small fraction of the cost of a trade-course. Just LOOK UP the facts you seek! You'll find the answer to any auto problem literally at your finger tips in the remarkable JIFFY INDEX, now a feature of this encyclopedia. Mail coupon quick, and get "AVIATION GUIDE," free with these books.

Can you take the "play" out of differentials? Can you kill the SHIMMY in steering? Can you reset TIMING? Can you put your finger on ENGINE TROUBLE instantly without guessing or tinkering? Can you pull the STARTER off and fix it? Can you adjust and repair transmissions, rear-axes, engines and electrical systems? Can you make emergency repairs on the road or are you helpless when some little thing goes wrong? Is your hand always in your pocket, paying, paying, paying?

Chicago, Illinois

You can play the HAWAIIAN GUITAR just like the Hawaiians!

Play all the latest hits just as the Hawaiians do. Be the most popular member of your set, a happy crowd always around you, everybody enjoying and admiring your playing. Get in on all the good times. Entertain your friends—or play professionally. We will help you.

Native Hawaiian expert directs you

You get expert instruction, directed by a world-famous player and teacher, Prof. Walter Kolomo-ku. He quickly reveals to you the secrets of this fascinating instrument.

Complete Conservatory Course

You get 52 complete printed lessons. Nothing is omitted. Pictures explain every move. And no matter how little you know about music when you begin, no matter if you have never touched a musical instrument, you can positively learn to play by our plain, easy picture method. You are sure to learn! What we can do for others we can do for you, 52,000 successful students. This record assures your success.

Learn at home in spare time

Study in spare time—in absolute privacy—when you like—as long as you like. Even if you don't know one note from another, our method is so simple you begin a piece your first lesson. In half an hour you can play it!

Only 4 motions to learn

Then you can play any music—popular songs, classical, old-time melodies, native Hawaiian airs—or real jazz—separately or with accompaniment. You'll never be lonesome after you learn to play on this beautiful Hawaiian Guitar.

GIVEN when you enroll— \$18 to \$20 Hawaiian Guitar

With Genuine Seal Grain Fabrikoid Cover and Complete Playing Outfit

Reliable retailers ask \$18 to \$20 for a similar instrument and outfit without the fine Fabrikoid Case, which alone is valued at \$3.50. Yet you receive this sweet-toned splendidly built Hawaiian Guitar, case and entire playing outfit, including picks, steel playing bar, tuning pipe, etc., without one penny of expense, as soon as you enroll.

Pay as you play

We make it easy for you. Start any time with a small first payment—then pay while learning. It comes to only a few cents per lesson. And bear in mind: Your only investment is the cost of the course—we furnish everything else.

No waiting—begin now

No waiting for a class to form—begin at once. The sooner you do, the sooner you will realize your ambition to become a real Hawaiian Guitarist. ACT!

OTHER 1 Tenor Banjo, Violin, Tiple, Tenor COURSES: Guitar, Ukulele, Banjo Ukulele—well-known instructors.

FIRST HAWAIIAN CONSERVATORY of MUSIC, Inc.

\$2500 DRAWING \$298 COURSE for

Haven't you often wished that you could draw cartoons, illustrate some idea, sketch some pretty face, etc.? You can do all of these things. One of America's most famous Cartoonists and Illustrators has developed a great, simple system for success in all branches of Commercial Art. This system has revolutionized the entire theory of drawing. It means that drawing can be as easy for you as writing—much simpler than learning shorthand, bookkeeping or typewriting. We are now placing this original system for learning Drawing, Art and Cartooning, consisting of 34 lessons with over 500 illustrations, within reach of every one. If you will devote a few hours each week to the Course WE ABSOLUTELY GUARANTEE that you will learn to draw and draw well before you have half finished the Course. If we fail to make this claim good, we will refund every cent paid us. By eliminating a large office force for answering correspondence, expensive catalogs, etc., we are enabled to make a price of \$2.98, the cheapest price ever known for a high-grade, home study course. Many have sent us letters similar to that of Rob't P. Davis of Detroit, who wrote: "I can't see how you ask so little. It is more than I expected." Learn to draw. It is a big asset, no matter what field you are in.

Send No Money

Just order the course and \$2.98 on arrival pay postman plus a few cents postage, payment in full for the entire Course and Drawing Outfit. If not entirely satisfied, return within five days and we will refund Money. Address:

LEDERER SCHOOL of DRAWING, Dept. 598-F, Chattanooga, Tenn. Orders from outside the U. S. A. are payable \$3.28 cash with order.

If you order the course at once, we will include a drawing outfit, consisting of artist's pencils, pens, paper, erasers, thumb tacks, etc., enabling you to go to work without any additional cost.

LEARN WATCH REPAIRING

You can learn by our modern and original system of instruction every part of the **Watch Repairing Trade** at home as good or better than at a shop. You can earn money while learning and secure a well paying position or start in business after completing our course of instruction. Good watch repairers are always in demand and earn from \$50 to \$75 per week. For particulars apply to the **Wisconsin School of Watch Repairing** 166 Mason St., MILWAUKEE, WIS.

Make Much Money

Making and Selling Your Own Goods. Formulas by experts. Manufacturing Processes. Trade-Secrets. All Kinds. All Lines. Send for interesting catalog, special circulars, free. **W. THAXLY CO.**, Washington, D. C.

Learn to PAINT SIGNS and SHOW CARDS

We quickly teach you by mail, or at school, in spare time. Enormous demand. Big future. Interesting work. Oldest, foremost school. **EARN \$50 TO \$200 WEEKLY** John Vassos, N. Y., gets \$25 for single show card. Crawford, B. C., says: "Earned \$200 while taking course." Send today for free information samples and guarantee.

MEN . . an amazing SHORT CUT to SUCCESS in RADIO!

MEN . . . here's a contract! No matter how little you may know about Radio . . . no matter what branch of the industry you'd like to get into . . . here's a short-cut method that guarantees you absolute satisfaction . . . or no cost to you!

As a result of this unique home-laboratory method, hundreds of ambitious men everywhere, are making the biggest money of their lives. Their days are full of adventure and success! For Radio is today one of America's greatest industries.

A Tremendous Opportunity

Over 20,000,000 Radio sets need servicing. Thousands of ships carry Radio transmitting and receiving apparatus. Long distance Radio telegraph communications are being opened in more and more countries. Hundreds of broadcasting stations are in operation. The number of Radio dealers has increased to 50,000. And the number of Radio manufacturers has increased to 4,000. And now Television and Radiotelephony too are opening up hundreds of additional opportunities! Thousands of men are needed! The pay is big and

the opportunities for success and adventure are limitless! Don't pass it by!

This Home-Laboratory Method Teaches Faster Than Text-Books

Radio authorities are astounded at this new short cut to success in Radio. For it cuts the time of theoretical study down to the lowest minimum! This expert training gives you the real practical side of every phase of Radio! As part of the course you get a magnificent outfit of fine standard Radio apparatus. With it you work out with your own hands and mind the Radio problems that command big pay. With it you can build many fine sets and dozens of different circuits. So that when you complete the training you will not be just a theorist . . . but a practical, down-to-earth Radio expert!

Training Sponsored by the Radio Corporation of America

Our graduates are in big demand everywhere. They enjoy greater success because they're posted right up-to-the-minute in everything in Radio. Radio's progress each year is measured by the accomplishment of the great engineers at work in the research laboratories of the Radio Corporation of America. This Radio organization sets the stand-

ard for the industry . . . And because it sponsors every lesson in the course, you know you are getting the real "dope."

Money Back If Not Delighted

The fascinating lessons prepare you for success in all phases of Radio manufacturing, servicing, selling, ship and shore broadcasting, Photoradiograms, Television, and airplane Radio equipment. A signed and sealed agreement assures you of complete satisfaction upon completion of the training—or your money will be refunded.

Read This Free Book

It tells you all you'd like to know about Radio. Its 50 fascinating pages and photos describe Radio's brilliant opportunities for adventure and success. It describes in detail the famous training that has enabled us to place thousands of our students in fine positions, usually from 3 to 10 days after graduation! Read this great book . . . it may mean the turning point in your life! Mail the coupon now—the book is absolutely free! Radio Institute of America, Dept. PM-4, 326 Broadway, New York.

GUARANTEE

If upon completion of your course you are not thoroughly satisfied that you have received full value and more, the Radio Institute of America will return to you the entire tuition fee paid on the course, in accordance with the terms of the agreement. In that way, you cannot lose, for you are fully protected.

OPPORTUNITY COUPON

ANY MAN who can read and write and use a pair of pliers can become an electrical expert and free himself forever from the long hours and drudgery of a small pay job.

And you can learn the **BIG PAY** profession of electricity right in New York City—the heart of the electrical world—the city of 100,000 jobs. At the same time you are learning the **BIG PAY** profession you can be enjoying the sights and wonders of New York, the modern Bagdad.

Be An Electrical Expert

Graduates of the **NEW YORK ELECTRICAL SCHOOL** are in demand by all the big electrical companies. Or, if you prefer the independence of a business of your own, there are thousands of opportunities for efficient, dependable men to become electrical contractors. When you are your own boss the money you can make is limited only by your own energy and ability.

Personal Instruction

The **NEW YORK ELECTRICAL SCHOOL** is not a correspondence school. You learn by doing—by personal instruction on full size standard electrical equipment under the personal supervision of trained instructors.

At N. Y. E. S. you train your hands and mind at the same time. You learn the theories of electricity—and then you are shown how to put the theories into actual practice by solving the problems with your own hands.

The man who has learned electricity by actually doing electrical work under intelligent personal instructors can go to any part of the world and be sure of a good living. There are N. Y. E. S. graduates in all the countries of the world.

Write today for the 48-page booklet giving full information about the N. Y. E. S. Course and showing pictures of the equipment available for your personal use in our two seven-story buildings. Mail coupon now! The New York Electrical School, 44 W. 17th Street, New York.

NATIONAL INDUSTRIES, 67 E. Lake St., Dept. 154, Chicago

"I GAMBLED 2¢ and WON \$35,840 in 2 YEARS"

*A Story for Men and Women
who are dissatisfied with themselves*

THIS is the story of a gamble—a 2c risk—which paid me a profit of \$35,840 in two years. I am not, and never was, a gambler by nature; in all probability I never would have taken the chance if more money was involved. So even if you too are against gambling, you will feel like risking two cents after you've read my story.

Some people believe I was lucky. Others think I am brilliant. But the sort of luck I had everyone can have. My type of brilliance is that of any average man.

Almost any \$40-a-week wage earner has as complete a mental equipment as I had two years ago. And he feels today just about the way I did then. For two years ago I too was in the \$40-a-week rut. My earnings were \$2,080 per year!

I was discontented, unhappy. I was not getting ahead. There didn't seem to be much hope in the future. I wanted to earn more money—a lot more money. I wanted to wear better clothes and have a car, and travel. I wanted to be on a par with people I then looked up to. I wanted to feel equal to them mentally and financially.

But it all seemed hopeless. I was beset with fears. I was afraid of losing my job. I was afraid of the future. I could see nothing ahead for myself and my wife and baby but a hard struggle. I would live and work and die—just one of the millions who slaved their lives away. I was irritable, easily annoyed, discouraged, "sore" at my fate and at the world. I could not think clearly. My mind was in a constant whirl. I was "scatterbrained." I had a thousand half-baked ideas to make more money but acted on none of them.

The end of each year found me in about the same position as the beginning. The tiny increases in salary, grudgingly given to me, were just about enough to meet the rising cost of living. Rent was higher; clothes cost more; food was more expensive. It was absolutely necessary for me to earn more money. So once in a while I got a few dollars more. But

it wasn't because of any great change in my ability.

Today I have an income of \$20,000 a year. That's exactly \$17,920 more than it was two years ago. A difference of \$35,840 in two years. My family has everything it needs for its comfort and pleasure. My bank account is growing rapidly. I have my own home in the suburbs. I am respected by my neighbors, and I have won my wife and children's love as only the comforts and pleasures of life can do. When I am old I will not be a millstone around anyone's neck. My children will not have to support me.

I look forward to the future with confidence and without fear. I know that only improvement can come with the years. Once I wandered through life aimlessly, cringing, afraid. Today I have a definite goal and the will to reach it. I know I cannot be beaten. Once my discontent resulted in wishes. Today my slightest discontent results in action. Once I looked forward hopefully to a \$5 a week increase in salary. Today I look forward confidently to a \$100 a week increase in my earnings.

What magic was it that caused the change in my circumstances? How did I, a \$40-a-week clerk, change my whole life so remarkably? I can give you the answer in one word—Pelmanism. I gambled 2c on it. Yet without it, I

might have continued in my old \$40-a-week rut for the rest of my life.

Pelmanism taught me how to think straight and true. It crystallized my scattered ideas. It focussed my aim on one thing. It gave me the will power to carry out my ideas. It dispelled my fears. It improved my memory. It taught me how to concentrate—how to observe keenly. Initiative, resourcefulness, organizing ability, forcefulness were a natural result. I stopped putting things off. Inertia disappeared. Mind-wandering and indecision were things of the past. With new allies on my side and old enemies beaten, there was nothing to hold me back.

I am writing this in appreciation of what Pelmanism did for me. I want other average men to gamble 2c as I did. For the cost of a postage stamp I sent for the booklet about Pelmanism, called "Scientific Mind Training." Reading that free book started me on my climb. I took no risk when I enrolled for the Course because of the Institute's guarantee. All I gambled was 2c and I am \$36,000 better off now than I would have been had I not written for the book about Pelmanism.

* * * * *

The Pelman Institute will be glad to send a copy of "Scientific Mind Training" to any interested individual. This book is free. It explains Pelmanism. It tells what it does to the mind. It tells what Pelmanism has meant to others. For over 25 years Pelmanism has been helping people to happiness. Over 630,000 others have studied this remarkable science. Among those who have praised it are such great world figures as Judge Ben B. Lindsey, Jerome K. Jerome, Sir Harry Lauder, T. P. O'Connor, Major-Gen. Sir Frederick Maurice, H. R. H. Prince Charles of Sweden, and many others. Your whole life may be altered as a result of reading "Scientific Mind Training." Send the coupon. You have nothing to lose. If Pelmanism does not help you it costs you nothing. There is no obligation in mailing the coupon. No salesman will call on you. Decide for yourself what to do after you read the free book about Pelmanism. Mail the coupon NOW.

The Pelman Institute of America,
71 West 45th St., Suite 64, New York

THE PELMAN INSTITUTE OF AMERICA.
71 West 45th St., Suite 64, N. Y. C.

I want you to show me what Pelmanism has actually done for over 650,000 people. Please send me your free book "Scientific Mind Training." This places me under no obligation whatever.

THIS is the electrical age, with unlimited opportunities for the man who has educated himself in the finer points of electrical practice.

Fit yourself for a big-pay job by knowing electrical practice complete, including inside and outside work, central stations, and the whole subject. With the aid of the Croft books you can know electricity as experts know it and put yourself in line for an expert's pay.

The Croft Library of Practical Electricity

A reference library and self-training course in eight volumes. 3000 pages—2100 illustrations

In these volumes Croft teaches you electrical practice complete. He takes you in quick, easy steps from the simplest principles to the complete and economical operation of a great central station. He tells you all that he has learned in twenty years of shirt-sleeve practice.

With these books at his elbow a man can learn as much about electricity in six months—good practical "bread and butter" stuff—as he would ordinarily learn in a lifetime of practice.

Flexible binding for easy handling

59,000 Croft Sets NOW IN USE

The Standard in Practical Electrical Training

The Croft Library is a complete electrical educator. It is founded on practice—on work as it is actually done. It is jammed from cover to cover with the kind of hard-headed facts you want. Written so that the beginner can easily understand it, yet so sound, so thorough, that it is the daily guide of 59,000 highly paid electrical workers and engineers.

Croft tells you the things you need to know about motors, generators, armatures, commutators, transformers, circuits, switchboards, distribution systems—electrical machinery of every type—wiring for light and power—wiring of finished buildings—underwriters and municipal requirements—illumination in its every phase—the latest and most improved methods of lighting—lamps and lighting effects, etc.—how to do a complete job, from estimating it, to completion.

Makes no mistake about it—there are big jobs in electricity ready for you when you're ready for them. Thousands of men who have the Croft Library know that to be a fact. The Library itself, on a FREE TRIAL BASIS, will prove it to your own absolute satisfaction.

NO MONEY DOWN SMALL MONTHLY PAYMENTS

Fill in and mail the coupon attached and we will send you the entire set of eight volumes for ten days' Free Examination. We take all the risk—pay all charges. You assume no obligation—you pay nothing unless you decide to keep the books. Then \$1.50 in ten days and the balance at the rate of \$2.00 a month. Send the coupon NOW and see the books for yourself.

RAISE RABBITS FOR PROFIT

EARN \$1,000 TO \$5,000 A YEAR

You can make spare time EXTRA MONEY, or full time BIG MONEY raising rabbits. Start in small way in corner of yard. Demand for rabbit meat exceeds supply and brings big prices. Over one hundred million rabbit pelts used yearly. Thus you make TWO profits—from both meat and fur.

D. Monroe Green, foremost rabbit expert and for 10 years with U. S. Government and former Director U. S. Government Rabbit Experiment Station, teaches you how by his famous home-study course. His proved successful methods show you quickly and easily how to make \$1.00 to \$3.00 for every hour of your spare time, and to soon build up a big income. Free Marketing Bureau.

His big new FREE book, "More Money in Rabbit Raising," gives you amazing facts of your opportunities in the million dollar rabbit industry. Write today. It's FREE.

FREE BOOK

NATIONAL RABBIT INSTITUTE

Dept. 1, 1709 W. 8th St., Los Angeles, Calif.

RAISE CHINCHILLA AND NEW ZEALAND WHITE FUR RABBITS

Make Big Money We Supply Stock and pay you following prices for all you raise: Chinchillas average \$5 each—New Zealand Whites \$2 each. 32-page illustrated book, catalog and contract, also copy of Fur Farming magazine, tells how to raise rabbits for big profits, all for 10c. Address OUTDOOR ENTERPRISE CO., Box 1021 Holmes Park, Missouri

Where do YOU want to Grow New Hair?

Decide NOW! Let me cover that spot with new hair in 30 days, or I'll mail you a check—I'll be the LOSER, not you!

WHEN approaching baldness threatens—when hair gets thinner and thinner on the temples, the forehead, the top of your head—that's the time to accept this no risk offer. I positively grow new hair—or you pay NOTHING!

New Hair in 30 Days—Or No Cost!

Thinning hair, falling hair, dandruff, dry scaly scalp—**DANGER SIGNALS ALL!** Stop delaying. Stop wasting time and money on ordinary salves, massages, tonics and oils, which you know from experience cannot possibly bring worth-while results! Save yourself from baldness this quick, easy way—through my iron-clad contract—without risk! For I GUARANTEE to end dandruff—stop falling hair—grow new healthy hair in 30 days—or I don't want a penny of your money!

Why does baldness begin to appear? Why do ordinary tonics fail to help? In most cases of baldness the hair roots are dormant—sleeping through lack of nourishment. And tonics fail to help simply because they treat only the surface skin. To make a tree grow you don't rub "growing fluid" on the bark. You get to the roots. That's the simple secret of my scientific treatment. It goes beneath the surface—nourishes dormant roots directly—stimulates them to new activity—encourages quick and healthy growth of new, vigorous hair.

At the Merke Institute, 5th Avenue, New York, many people have paid as high as \$100 for results secured. Now you can secure equally beneficial results at home for only a few cents a day—AT MY RISK. You grow new hair where you need new hair—or I pay, not you!

Coupon Brings FREE BOOK Explaining Treatment Fully!

Some cases of baldness are hopeless. I admit it. But so many thousands have benefited through my remarkable treatment that the facts are certainly worth knowing. Mail coupon for vitally interesting FREE booklet, giving the complete story—and, in addition, telling all about my iron-clad contract, which enables you to take the treatment without a penny's risk. No obligation. Sign and mail the coupon NOW! Allied Merke Institutes, Inc., Dept. 164, 512 Fifth Avenue, New York City.

Allied Merke Institutes, Inc.,
Dept. 164, 512 Fifth Ave., New York City.

"Height Increasing"

Is Report of Hundreds

Results have been remarkable. Letters from all over tell of decided height increase gained in a few months. They tell of improved health, more pep and life, greater efficiency, more joy in living because of better physical condition. Nothing like our course. Based on sound, proven, scientific principles.

No Drugs—No Dope

We have no magic medicine to sell. Only a system of simple exercises and special diet, assisted by a simple apparatus. Takes but a few minutes each day. The Glover system helps overcome the flattening of the vertebrae and the sagging of the supporting muscles. Permits cartilage cushions in spinal column to expand. Strengthens muscles. Stimulates nerves. Results have been permanent because based on true physiology. Unusually successful in under-developed young men and women.

ELECTRICITY

Complete Study Course and Pocket Library \$10

SHIPPED FREE

A set of **HAWKINS GUIDES** is a true friend to the electrical worker. It tells you how to do any job the right way—without guessing or taking chances.

Hawkins Guides put all the facts about modern electrical engineering at your finger tips. Therefore your chances for advancement in the electrical field are unlimited.

HAWKINS GUIDES DOUBLE YOUR VALUE

Electricity is king! It is the ruling force of today—transportation, communication, light, heat, power—indeed every modern activity is dependent on electricity. Industry is crying for electrical men that know their jobs!

Hawkins Guides teach you all you need to know about electricity in easy, step-by-step lessons. Daily spare time reading of the Guides will greatly increase your value to yourself and your employer in a few weeks. Hundreds of our friends have written us and told us this!

READERS OF HAWKINS GUIDES KNOW HOW

"You can't stump him on an electrical job." "He certainly knows his business." "Certainly have to hand it to him for knowing how."—These are the things employers say about our friends who are readers of **Hawkins Guides**. No matter what question or problem comes up the Ready Reference Index enables you to give an expert answer at once.

HAWKINS STARTS YOU WHERE OTHERS LEFT OFF

Why should you work at low wages when easy reading of **HAWKINS GUIDES** will give you the money-making knowledge of the expert? Easy daily reading of the Guides will teach you in a few months what it has taken the expert a lifetime to learn!

With **HAWKINS GUIDES** in hand you have a running start to success in the electrical field. You will actually begin where others left off!

NOW!

This coupon is your golden opportunity. Tear it out—send it now!

FOR EXAMINATION!

REAL ELECTRICAL EDUCATORS

"Hawkins Guides at \$10 is the best investment I have ever made. Am able to take up almost any electrical job and have never gone to an electrical school."—**B. Roessler, Oenaville, Texas.**

AS EASY AS A. B. C.

"Everything in Hawkins Guides is very plain and anybody can read and understand them as easy as A. B. C."—**J. Knight, Tobyhanna, Pa.**

OTHER ENTHUSIASTIC READERS SAY

"Worth ten times their price." "Helped me to two raises in four months." "Better than a school of instruction." "Studied them when I was laid up and got further ahead than if I had been on the job."

Hawkins Guides Explain These Points So You Can Easily Understand:—

Magnetism—Induction—Experiments—Dynamometers—Electric Machinery—Motors—Armatures—Armature Windings—Installing of Dynamometers—Electrical Instrument Testing—Practical Management of Dynamometers and Motors—Distribution Systems—Wiring—Wiring Diagrams—Sign Flashers—Storage Batteries—Principles of Alternating Currents and Alternators—Alternating Current Motors—Transformers—Converters—Rectifiers—Alternating Current Systems—Circuit Breakers—Measuring Instruments—Switch Boards—Wiring—Power Stations—Installing—Telephone—Telegraph—Wireless—Bells—Lighting—Railways. Also many Modern Practical Applications of Electricity and Ready Reference Index.

The real money is in these professional fields

DRAFTING—ARCHITECTURE

ENGINEERING—ELECTRICITY

A real salary—a steady five-figure income—a dignified out-of-the-trades class position or a business of your own. That, briefly, is what Engineering, Architecture, Electricity or Drafting can mean to you. For in these fields, billions are spent annually. Millions go to those men specially trained to lay out and superintend construction work. Industry needs trained Draftsmen,

Engineers and Architects. Everywhere big salaries and bonuses are being paid. Men are at a premium. You're needed—and wanted if you're trained.

Chicago Tech Gives You That Training

For 26 years one institution—the Chicago Technical College—has been developing trained specialists in drafting and engineering. Its graduates are in great demand. Its courses represent the last word in tested and proved practical training for young men.

3 Easy Plans

You need not be without this training. 3 Plans make it easy for you no matter what your circumstances.

Come to Chicago if you can. Enter our resident school in either the 2 year Diploma or 3

year B. S. Degree Course. Either of these courses give you the maximum in thorough, up-to-the-minute and practical training. Mark Plan No. 1 on the coupon if interested in these courses. It brings you our free 80 Page Blue Book and all the facts.

If your time is limited, consider our 4 months' course in Drafting—just mark Plan No. 2 on coupon.

And finally, if you can't come to Chicago, then study at home—earn while you learn—and mark Plan No. 3 on the coupon.

But get the coupon going now—for you can't afford to be without the facts that show you how to get into these 4 Big billion dollar fields.

Earn While Learning

Chicago offers opportunities for part time work to help defray expenses. The College assists students in making desirable employment connections.

FREE! Body Chart

If you will mail the coupon below, this Anatomical and Physiological Chart will be mailed to you without one cent of expense. It shows the location of the Organs, Bones of the Body, Muscles of the Body, Head and Vertebra Column and tells you how the nerves radiate from your spinal cord to all organs of the body. This chart should be in every home.

Where Is That PAIN?

It may be in the neck, back, hips, stomach, liver, legs or arms. Wherever it is, the chart will help to show you the location and cause of your ailment. For instance, this chart will help you locate verminiform appendix pains. Hundreds of lives might have been saved if people had known the location and character of the pain and had received proper attention.

Stop that Pain

By Relieving the Cause with

Hear After Using Radio. Amazing Discovery.

Hundreds of people heretofore deaf are hearing after using radio. The principle responsible has been embodied in a self-contained device, the SYNCRO-VIBRATOR, which has given amazing results. Some helped almost immediately. No radio needed. Full details on request. No obligation. Address Yorke Burgess, Consulting Electrical Engineer, Crystal River, Florida. Dept. 6-B.

CORRECT Your NOSE

to perfect shape while you sleep. Anita Nose Adjuster guarantees SAFE, rapid, permanent results. Age doesn't matter. Painless. 68,000 doctors and users praise it. Gold Medal Winner. Write for FREE Booklet and 30-Day Trial Offer.

ANITA INSTITUTE
D-12 Anita Bldg.

Newark, N. J.

RUPTURE IS NOT A TEAR NO BREAK TO HEAL

Some people have a mistaken idea that rupture is a tear. Rupture is not a tear, but purely a muscular weakness in the abdominal wall. Trusses merely brace these muscles, but do not strengthen them—on the contrary the gouging of the ordinary truss pad often increases this weakness, as it tends to shut off blood circulation. STUART'S ADHESIF PLAPAO-PADS are entirely different—being mechanico-chemico applicators—made self-adhesive purposely to keep the muscle-tonic called "Plapao" continuously applied to the affected parts, and to minimize danger of slipping and painful friction. No straps, buckles or springs attached. Fabric soft as velvet—easy to apply—inexpensive. Awarded Gold Medal, Rome, Grand Prix, Paris, Honorable Mention, Panama Pacific Exposition, San Francisco, etc. For almost a quarter century satisfied thousands report success—without delay from work. Stacks of sworn testimonials even from the far corners of the Earth. Process of recovery is natural, so no subsequent use for trusses.

Stop wasting your time and money on old-fashioned truss devices. Learn how to close the hernial opening as nature intended, so the rupture can't come down. Send no money; just mail the coupon below for FREE 10-day test supply of the remedial factor PLAPAO and 48-page illustrated book on rupture. This will cost you nothing now or later! For your own good—write today—tomorrow may be too late.

to
young men
 ambitious to become
 leaders in America's
 newest industry ~

Aviation

Fortunate young men! To have your futures paralleling that of a new giant industry offering you boundless opportunities. For this is the young man's day. And aviation, still but an infant industry in spite of its present \$100,000,000.00 proportions, is a young man's business. The future of aviation is definitely tied up with your future because its development depends upon the young man trained to develop it.

opment depends upon the young man trained to develop it.

What Aviation Needs. And You!

Aviation needs men with thorough, practical training to operate the rapidly developing transcontinental air lines. It needs men trained to supervise operations and traffic. It needs men with a thorough knowledge of aviation to direct the development of this new business in financial circles, manufacturing plants and dozens of allied industries. A shortage of trained men now exists. Having a practical knowledge of aviation as given in Universal Aviation Schools, you are prepared to grow with the industry in any field it touches upon. Can a man with a spark of ambition overlook this opportunity?

Meet Opportunity Half Way

Prepare now for what the future may offer. Thorough training in all branches of aviation from its business and maintenance end to the actual flying of commercial aircraft, is now available through the Universal Aviation Schools. These schools have been established in a number of cities by the Universal Aviation Corporation, a \$10,000,000.00 organization operating aircraft over 5,000 miles of airways a day, between the principal cities of the country. Realizing the need for thoroughly trained men, the Universal Schools have been provided with the finest and latest equipment and the highest type of instructors in the Nation. Universal training will put you where you want to be in aviation.

How to Start

We want to hear from young men with ambition, not curiosity seekers. Therefore, we ask you to send 25c for the book shown here, which tells what Universal

training may mean to you. Full of helpful information on the growth of aviation and the opportunities it offers. Beautifully illustrated. Send for your copy today.

Universal Aviation Schools

A Division of the

Universal Aviation Corporation

Operating air lines between the Twin Cities, Chicago, St. Louis, Kansas City, Omaha, Cleveland, Cincinnati and Louisville, carrying air mail and passengers.

Only latest type government licensed ships and transport pilots having hundreds of hours of training experience are employed for student instruction in Universal Aviation Schools.

ELECTRICITY

This Quick Easy Way

Electricity is great fun! And it pays. Lots of my boys still in school are making \$10 to \$15 a week in spare-time—and getting a real training besides for a regular he-man's Big-Pay job in Electricity when school days are over. You can, too! I'll show you how. Begin right now to prepare for a big future in this fascinating field of great opportunity. Your chances of success are simply wonderful!

Learn Right at Home

With my easily-learned, spare-time Electrical Course I will train you at home like I trained hundreds of other boys who are now big successful men. It won't interfere with your school work. And you'll find it so enjoyable it will be more like play than study. It's just the thing for you fellows who are ambitious to get somewhere and be somebody after you have finished school.

I Train You RIGHT!

My training is practical—you learn along work-shop lines by doing. I furnish you with all necessary equipment to work with. And it doesn't cost you a penny extra! Six Big Outfits of tools, material and apparatus, including a real electric motor—not toys, but the real thing. And they're yours to keep—to learn right with, and to help you do the spare-time work I tell you how to get and how to do.

Mail Coupon for Book

If you want lots of spending money—if you want to be ready to jump into a Big-Pay Electrical Job when you're through school—my Big Book will show you how. Get it—you'll like it—it's full of "dope" data and pictures that will thrill you. And it's FREE—won't cost you a penny—mail coupon for it right now

10 Inches Off Waistline In 35 Days

"I reduced from 48 inches to 38 inches in 35 days," says R. E. Johnson, of Akron, O., "just by wearing a Director Belt. Stomach now firm, doesn't sag and I feel fine."

The Director Belt gets at the cause of fat and quickly removes it by its gentle, kneading, massaging action on the abdomen, which causes the fat to be dissolved and absorbed. Thousands have proved it and doctors recommend it as the natural way to reduce. Stop drugs, exercises and dieting. Try this easy way.

Sent on Trial

Let us prove our claims. We'll send a Director for trial. If you don't get results you owe nothing. You don't risk a penny. Write for trial offer, doctors' endorsements and letters from users. Mail the coupon NOW!

Test This Amazing Money Making Invention **FREE**

Men, here's the most remarkable money maker of the age! A little automatic machine that makes old-style can openers obsolete! Now, just a twist of the wrist makes the dollars hum for you! So mail the coupon today for liberal **FREE TEST OFFER**.

\$7 to \$10 In An Hour Just Showing This \$1,000,000 Can Opening Machine

NO more awkward stabbing and hacking with old-style can openers! No more danger of blood poisoning from gashed and lacerated fingers! For now a remarkable new invention banishes every old-style can opener to the scrap heap. Now a simple twist of the wrist opens any can in a couple of seconds. No wonder they all simply go wild over it! No wonder salesmen often sell to every house in the block and make from \$7 to \$10 in an hour!

Works Like a Charm

This queer little device doesn't just chop a ragged hole in the top of the can. It cuts the entire top completely out, clean as a whistle! The machine takes hold of the can—opens it—flips up the lid so you can grab it—and gives it back without any sharp edges to snag your fingers. You just put the

can in the machine—turn the handle—and almost instantly the job is done!

Sells Itself in 10 Seconds

Everyone knows how women detest the dangerous old style can opener. Imagine, then, how they welcome this startling new method—this automatic way of doing their most distasteful kitchen task. Men, honestly I'm not exaggerating one bit when I tell you that not ten words are necessary to sell any of them! All you do is hand your demonstrator to your prospect and let her try it! She sells herself in ten seconds by the clock—and you pocket a nice, fat profit! Yes, really, it's just that simple and easy! That's why \$75 to \$150 a week is easy anywhere.

Opens Any Can in a Jiffy

You just fasten the can in the holder and turn the handle. Nothing complicated, nothing to get out of order. Opens any can,

square, round or oval, in a few seconds. And, men, IT'S PATENTED, so there is no competition.

Act Quick for Free Trial Offer

I don't care whether you're an "old timer" or just breaking in—the quickest, easiest money of your life is waiting for you now, right here! That's a mighty strong statement. But all I ask is a chance to prove it at my risk. I know this proposition will coin money for you so fast that it will make your head swim! Territories are closing fast. The Free Test costs you nothing. Just mail me the coupon and I'll shoot you the most sensational dollar making plan you ever heard of. Mail it today! Right now!

Central States Mfg. Co.

Dept. D-702, 4500 Mary Ave., St. Louis, Mo.

OH BOY!

How the Dollars Roll In

FULL TIME \$265 In A Week

"Here is my record for first 30 days with Speedo: — June 13, 60 Speedos; June 20, 84 Speedos; June 30, 192 Speedos; July 6, 288 Speedos. Speedo sells to 9 out of 10 prospects."

SPARE TIME — \$9 First Half Day

"The first afternoon I received my Speedo outfit I made \$9."

PART TIME — \$20 in 3 Hours

"I worked about three hours and took 25 orders. This is certainly a money-maker."

O. C. Gregg, Wyo.

Revolutionary New Sharpener

Works like magic. Puts a razor edge on any knife or tool in a few seconds. Anyone can use it. Sharpens seissors too. The coupon brings full details.

Tobacco Is Hurting You

Look at the facts square in the face, Mr. Tobacco User. You may think tobacco is not hurting you.

That is because you haven't as yet, perhaps, felt the effects of the nicotine poison in YOUR system. For you know that nicotine, as absorbed into the system through smoking and chewing tobacco, is a slow working poison. Slow, yes—but **sure**.

Tobacco is lowering your efficiency. It slows a man down. Makes it harder for you to concentrate your mind on your work. You haven't near the amount of "pep" and energy you would have if you stopped using it. There's many a man twice as old as you in years who's twice as young in energy, simply because he lets tobacco alone.

Some day you will realize to what an alarming extent tobacco has undermined your system.

When your hands begin to tremble—
and your appetite begins to fail—
and your heart seems to "skip a beat" now and then—
and slight exertion makes you short of breath—
then you have a right to suspect that
TOBACCO is getting the upper hand.

Any well-informed doctor will tell you that these are only a few of many symptoms of tobacco poisoning.

And YOU know that the use of tobacco in any form is an expensive, utterly useless habit. You know you ought to quit.

Tobacco Habit Banished Let Us Help You

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or 50 years, or how much you use, or in what form you use it—whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff—Tobacco Redeemer will positively remove all craving for tobacco in any form in a very few days. Not the slightest shock to the nervous system. Your tobacco craving will usually begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is marvelously quick, scientific and thoroughly reliable.

It is in no sense a substitute for tobacco. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It helps to quiet the nerves and make you feel better in every way.

Results Guaranteed

A single trial will convince you. Our legal-binding, money-back guarantee goes with each full treatment. We will refund every cent you pay for the treatment if after taking it according to the easy-to-follow directions, it should fail to banish the tobacco habit completely.

SEND Coupon for Free Proof

Let us send you our free booklet on the deadly effects of tobacco, together with testimonial letters from men all over the country telling how they have been absolutely freed from the tobacco habit by this simple home treatment. You could not ask for stronger proof that Tobacco Redeemer will free you from the habit than the evidence we will gladly send on request. Just mail the coupon—or a postal will do.

Gain Health *and* Strength If You Want *the* Good Jobs

LIONEL STRONGFORT

Dr. Sargent, of Harvard University, U. S. A., declared Lionel Strongfort to be unquestionably the finest specimen of physical development he had ever seen.

ing your energy and stamina. External muscular development follows quickly and you become a new man inside and out—a fellow to be reckoned with and envied wherever you go.

Send For My FREE BOOK

"LIFE'S ENERGY THROUGH STRONGFORTISM"—a revelation of inside facts about the human body that makes it priceless to men seeking to banish vitality-sapping ailments, weakness unfitting them for every physical function and consequent mental depression. This book points the way to a newer, better, joyous life. I will be glad to send it to you Free. WRITE TODAY for your copy.

STRONGFORT INSTITUTE
LIONEL STRONGFORT, DIRECTOR.

Specialist in health and strength Development for over 30 years.

Dept. 695, NEWARK, NEW JERSEY, U. S. A.

Man, you won't get anywhere without health!

Businessmen and industrial leaders everywhere are insisting upon health in their employees. Not only do they realize that success in business and industry today depends upon the steadiness, sobriety and daily energy of their workers in their enterprises, but businessmen like to have energetic, healthy, fresh looking, vital workers around them—from the office boy to the old janitor. They won't stand for lazy, anaemic, pimple-faced, half-alive, sickly, complaining assistants. Such weaklings lack push and staying power. These laggards are off sick with colds, headaches and bellyaches of all kinds, all too many days. Employers realize they can never promote a business to great success with such employees.

Weakness Brings Failure

You can't win success when you are ailing and complaining. You will be a drawback to business. If you go on "the road" selling goods you become a broadcaster of "hard times" and "slow business"—you spread pessimism wherever you go. You chase away orders, where a healthy, good looking, cheerful chap would bring in business.

If you are a sickly, sissy weakling you repel trade—women shrink from you; men despise you. If you are alert, athletic looking, ruddy-complexioned, eager to serve, you will sell goods without half trying and thus make yourself invaluable to your employer—you win success and promotion.

In the shop, where energy, muscle and everyday service is required to speed-up production, the fellows who exhibit brawn, energy and stamina are the men that are hired and never fired.

So it is all along the line—no getting away from it. Health is necessary to success. Health pays.

Leading Employers Demand Healthy Employees

Read what some of the biggest employers have to say about health requirements in their enterprises:

THOMAS A. EDISON, INC., Orange, N. J., say: "We make good health an essential requirement for a position."

THE ATWATER KENT MFG. CO., Philadelphia, say: "An employee who is careful of his health is more efficient than one retarded by the handicap of an unsound body."

THE PENNSYLVANIA RAILROAD CO., Philadelphia, writes: "It is the policy of this company to have applicants for employment undergo a physical examination."

THE ARMSTRONG CORK CO., Lancaster, Pa., writes: "Good health is given almost first importance in selecting our employees."

STRONGFORTISM

Will Work Wonders with You

Through STRONGFORTISM men all over the world have been energized and restored to health and strength after they have suffered untold mental and physical horrors as the inevitable result of excesses, fast living, and abuse of their physical powers. STRONGFORTISM has a record unparalleled—there is nothing that compares with it in restoring impaired human beings to health and strength.

STRONGFORTISM begins at the source to create new energy and strength by utilizing Nature's forces scientifically. It builds up the internal muscular system first and thus gets rid of Constipation, Dyspepsia, Indigestion, Heart Ailments, Bad Blood, Catarrhal Troubles, Rheumatism and other afflictions, increasing your energy and stamina. External muscular development follows quickly and you become a new man inside and out—a fellow to be reckoned with and envied wherever you go.

One day I picked up a magazine out of the street—that was my start in AVIATION!

YOUR training opened up to me a new life. You took me out of the labor ranks and gave me a real opportunity. It happened like this:

"One day while I was fixing a tire, I noticed an old magazine lying in the street. I picked it up and glancing through its pages, saw Lieut. Hinton's picture. I read what he said about opportunities in Aviation and how he was training men at home. I sent for the free book; and surely 'fell for it.' Then came the first instructions—and right there, I took on new life. I went through the whole course and when I finished, I could talk Aviation like an authority.

"About that time, they opened up an aero club here and I went over to talk with the flight instructor. He asked me a lot of questions about a plane and I answered him like an old timer. He wanted to know where I had piloted and was greatly surprised when I told him I had never flown.

"Well the upshot of it was that I was made an assistant instructor. So now

I'm getting my hours in the air and at the same time getting paid to teach others what you taught me. My advice to anyone interested in getting into Aviation is to train under you first of all, for then he will be ready for ANY opportunity—on the ground or in the air."

ALBERT SHUKOFF,
Hamilton, Ont., Canada

get HINTON'S
free book

Albert Shukoff is but one of many men who owe their present profitable place in Commercial Aviation to Lieutenant Walter Hinton. Get the facts—find out how he trained them and how he is ready to train you—right at home. This big book is FREE to men over 16 years of age. \$350 a month

"I feel proud of my success in Radio to date. My profit during the last two months amounts to \$700. I am making good and I have not finished my N. R. I. course yet. I am grateful for your training and co-operation to date and look forward to still bigger success when I graduate."

Clarence Heffelfinger,
Temple, Penna.

\$500 a month

"When I enrolled with the N. R. I., I was a motorman on a trolley car. Now I have a fine, fast-growing Radio business. When only half way through the course started bringing in extra money. I made \$420 in my spare time. Now I have a bank account of \$2800 and about \$500 worth of stock. It has all come from Radio since graduating less than six months ago. I cannot begin to express my thanks to you and all those connected with N. R. I. for what you have done for me."

Richard Butler, 3535 Sheffield St.,
Philadelphia, Pa.

\$450 a month

"In addition to my regular work in what I believe to be the largest and best equipped Radio Shop in the Southwest, I am now operating KGFI. I am proud of the fact that I installed and put KGFI on the air without help of anyone except the N. R. I. I am averaging \$450 per month."

922 Guadalupe St. Frank M. Jones,
San Angelo, Tex.

READ what Big Money my men make in RADIO

\$350, \$450, \$500 a month. That's making real money. What business other than Radio offers such opportunities after six to twelve months training? None that I know of. More proof—last year electricians, farmers, mechanics, clerks, railroad men, bookkeepers, preachers, doctors, and men from 78 other trades and professions enrolled with me to prepare for the Radio field.

Big Growth Making Many Big Jobs

A WONDERFUL business, you will say, to make men trained for other fields, give them up for Radio. Yes, but they had their eyes wide open. They know what you and I know—that big growth makes big jobs and many opportunities to earn big money. Heffelfinger, Jones, and Butler couldn't make anything like this money before, although they probably worked just as hard—maybe harder. Trained men are needed for the big jobs the amazing growth of Radio is creating.

Salaries Up To \$250 a Week

WHY go along at \$25, \$30, \$35 a week when the good Radio jobs pay \$50 to \$250 a week? Cut loose from drudgery, small pay, no-future jobs. Get into a live-wire field that offers you a real chance. You don't need a high school or college education to become a Radio Expert. Many of my most successful graduates didn't finish the grades.

Practical Experience With Course

I GIVE you six big outfits of Radio parts. With them you can build and experiment with one hundred different circuits—learn the "how" and "why" of practically every type of set made. This makes learning easy, interesting, fascinating, your training complete. Nothing else equals my method.

TELEVISION also Included

YOUR knowledge of Radio will be right up to the minute with Radio's progress and inventions when you take my training. Television, the new field for Radio experts, is included. Not one system for sending and receiving pictures by Radio, but all of them—Jenkin's, Cooley's, Bell's, Baird's, Belin's, Alexanderson's.

Television can easily and quickly become as large as the whole Radio industry is today. Broadcasting stations will soon need trained men, so will manufacturers for the designing and building of sending and receiving sets. It won't wait for you. Get ready quick.

I GIVE YOU THE RADIO PARTS FOR A HOME EXPERIMENTAL LABORATORY

WITH THEM YOU CAN BUILD 100 CIRCUITS. 4 YOU BUILD ARE SHOWN HERE. MY BOOK EXPLAINS THIS PRACTICAL FASCINATING WAY OF LEARNING RADIO

Get a copy Free

I Will Train You at Home in Your Spare Time

NO NEED to leave home. Hold your job, give me one-half to one hour a day of your spare time. In six to twelve months you can be a trained Radio Man, ready to step into a new job with a real future.

\$10 to \$30 a Week While Learning

MANY of my students make \$10, \$20, \$30 a week extra while learning. I teach you to begin making money shortly after you enroll. G. W. Page, 1807 21st St., Nashville, Tenn., made \$935 in his spare time.

Money Back If Not Satisfied

I KNOW the kind of training you need. I have put hundreds of men and young men ahead. I am so sure that I can satisfy you too that I will agree to refund your money if you are not satisfied when you complete my course.

Find Out What Radio Offers You

MY 64-page book explaining where the big jobs are and what you can make is FREE. Mail coupon. No obligation.

THIS IS RADIO'S BIGGEST YEAR

High School Course in Two Years!

You Want to Earn Big Money!

And you will not be satisfied unless you earn steady promotion. But are you prepared for the job ahead of you? Do you measure up to the standard that insures success? For a more responsible position a fairly good education is necessary. To write a sensible business letter, to prepare estimates, to figure cost and to compute interest, you must have a certain amount of preparation. All this you must be able to do before you will earn promotion. Many business houses hire no men whose general knowledge is not equal to a high school course. Why? Because big business refuses to burden itself with men who are barred from promotion by the lack of elementary education.

Can You Qualify for a Better Position

We have a plan whereby you can. We can give you a complete but simplified high school course in two years, giving you all the essentials that form the foundation of practical business. It will prepare you to hold your own where competition is keen and exacting. Do not doubt your ability, but make up your mind to it and you will soon have the requirements that will bring you success and big money. **YOU CAN DO IT.**

Let us show you how to get on the road to success. It will not cost you a single working hour. Write today. It costs you nothing but a stamp.

The MOCAR MODEL AIRPLANES

THAT FLY

SET NO. 1

\$1.50
COMPLETE
POSTPAID

From Hawaii

Mt. Carmel Mfg. Co.

Dear Sirs:

Yesterday was Aviation Club Day. We received our Construction Outfit (Set No. 1). In about an hour and a half I riveted the parts and covered the outside and everything. I took it out and flew it. It flew gracefully! I have already made many planes and racers, but never in my life have I gotten a plane that you could make so easily, so quickly and fly well. Think of it, an hour and a half since I started making it, it flew, and well too!

It is just the kind of plane that the airplane builders like, especially the "Green-Horns."

Yours very truly, KIGOSHI UZAWA

Schofield, Oahu, T. H.

and from the Schools

Sanborn, Iowa

Mt. Carmel Mfg. Co.

Dear Sirs:

Received the Mocar model airplane which I ordered from you some time ago. I find it highly satisfactory for classroom use.

Please send me also more Mocar model airplanes for one of my classes.

JOE E. CUFFEL
Instr. Manual Arts
Sanborn, Iowa

BOYS Don't miss the fun of making and flying a "MOCAR"

HERE IS THE GREATEST VALUE YOU'VE EVER SEEN
—A GENUINE ALUMINUM MODEL AIRPLANE THAT
REALLY FLIES, AT A SMALL PRICE

The "Mocar" monoplane—Set No. 1—is a copy of Lindbergh's famous Spirit of St. Louis. Wing spread 18 inches, fuselage 12 inches, powerful motor, special propeller, rubber tired disc wheels. Weight complete only about 2½ oz. This is a practical, simple, real model plane that gives you a whole lot of fun at a very moderate cost.

The all metal construction makes a sturdy plane that will stand a whole lot of abuse. The outfit is mounted on cardboard with all parts plainly marked and full instructions for assembly. Pliers only tool necessary.

Construction Set No. 1. Complete with rivets, bolts, wheels, wing and fuselage covering material, only \$1.50 postpaid (3 for \$4.00). Model L made up ready to fly \$2.25 (3 for \$6.00) postpaid.

Order now—or see your dealer

Poor English!

How much is it costing you
in wasted opportunity?

Every day your associates are judging you—by what you say and how you say it! Hazy ideas, ill-chosen words, halting sentences, crude, slovenly speech—these mark a man as loose in thinking. Thoughts clear-cut, words that give true shape and color, sentences aflame with power and originality—these are the things that proclaim ability, that win for their users swift advancement. Stop apologizing for poor English—it's inexcusable! In the quiet of your home—with LaSalle's help—you can learn to speak and write with real distinction, learn to make the words you utter and the letters you compose stamp you as educated, cultured, a power to reckon with in the business world. Complete details in an attractive 32-page book, "Effective Business English," sent you free upon request. Ask for it TODAY.

LaSalle Extension University, Dept. 464-BE, Chicago

This Amazing Guarantee Means— Auto Tires Free Every Year to Smart Car Owners!

TIRES and gasoline are the two big costs in running a car. You spend enough money for gasoline every year to buy yourself *three* sets of tires. I guarantee to cut your gasoline bill *one-third*. I offer you free proof you can increase your gasoline mileage so as to save enough to keep your car in tires. In just five minutes you can attach the famous Stransky Vaporizer to your motor. Hardly bigger than a silver dollar, but it should save you from \$60 to \$80 a year or more.

World Wide Proof

Three million car owners have installed the Stransky Vaporizer on its merits. Thousands have reported amazing increases in gasoline mileage. F. S. Carroll got 40 miles per gallon from a Chevrolet. "Battling" Nelson, pugilist, increased his mileage to 33 1/2 miles per gallon with a touring car and over 40 miles per gallon with a roadster. Virgil Barnes, big league pitcher, drove from New York to Holton, Kansas, and averaged over 40 miles per gallon.

Cuts Gasoline Consumption 1/3, Free If It Fails

Fits any car in 5 minutes. Automatically supercharges gasoline with air. Out more power out of less fuel. Patented—can't be copied. Three million now installed. One of the most successful inventions in the history of the automobile.

What Extra Mileage Means!

The amazing thing is that even if you cut your gasoline consumption only one-third—even if you increase your mileage to only 16 or 18 miles per gallon—you will save enough every 3000 miles of travel to buy yourself a new tire! That is what the Stransky 30 day guarantee means to you—free tires for the life of your car or the Vaporizer costs you nothing!

Make This Test

Let me send you a Stransky Vaporizer on trial at my risk with the understanding that it costs nothing if it fails. Loosen one connection and insert the Vaporizer. Turn down the set screw on your carburetor as directed.

Check results. Compare the mileage you get with the mileage you used to get.

See for yourself how power, pickup and speed are noticeably increased. We give you 30 days to satisfy yourself—a full month. Then, if the Vaporizer is not saving you at least \$5 a month, why simply mail it back, and the trial costs absolutely nothing. No obligation—no argument—no questions asked.

Mail the coupon below for full details, guarantee, and amazing trial offer. This first step does not obligate you in any way whatever.

Salesmen and Representatives Wanted—\$3 An Hour

Show the Stransky Vaporizer to car owners. Sells fast under test and guarantee. Foster made \$357 in 2 weeks. G. F. Fuller earned \$114 in 3 days. You should earn at least \$3 every hour you put in. Get demonstrating sample offer and full details. Simply check coupon.

The STRANSKY Vaporizer

() Check here for representative's full or spare time money-making plan.

See What Increased Mileage Saves You!

Users of the Stransky Vaporizer have reported up to 40 miles on a gallon of gasoline. The saving in such cases is enormous. The following outline is based on an average of 12 miles per gallon and an average saving of only one-third.

Without Vaporizer

Miles per month (avg.) 900 miles
Divided by miles per gal. 12 miles
Equals gals. per month 75 gals.
Multiplied by the cost
per gal. 20c
Equals cost per mo. \$15.00

With Vaporizer

Miles per month..... 900 miles
Divided by miles per gal. 18 miles
Equals gals. per mo. 50 gals.
Saving per month.... 25 gals.
Multiplied by cost per
gal. 20c
Equals monthly saving \$5.00
Yearly saving..... \$60.00

Look! Bald Men

One Full Ampoule of my amazing hair fluid which I discovered myself and which grew hair on my head.

FREE

This Ampoule is absolutely free. Don't send any money. There is no C. O. D. No charge whatsoever. All I want is an opportunity to show you how easily I grew hair on my own and hundreds of other men's heads. Merely mail the coupon below for free Ampoule.

Here Is How I Used to Look

I was just as bald as this picture. It is a true photograph without any tampering or retouching. It is exactly as I used to look. Then look at the full head of hair I have in the picture on the left.

As I have stated so often, I don't know whether I am the first man who discovered this great secret, but I do know I have it, that I grew my own hair and that I am growing hair on the heads of other men all the time.

Bald Men Grow Hair Quick!

What I accomplished on my own head and on other heads I can do for you, provided you are under 45 years of age and loss of hair was not caused by burns or scars. Anyhow, I must succeed or you pay nothing. No apparatus. My home treatment is simple, quick, inexpensive.

Mail This Free Coupon!

Mail the coupon today—Right Now—I will send you, immediately, one full Ampoule of my marvelous fluid which I discovered, of which I hold the secret and which grew my own hair on my bald head. Besides the Free Ampoule of Fluid, I will send photographs, names and addresses of men and women who successfully used my Wonder Fluid for Dandruff, Falling Hair and Baldness.

Vreeland

1354 Euclid-Windsor Bldg., Cleveland, O.

Here is
← **Brennan**
Brennan was bald.

And Brennan after Vreeland grew his hair. Write and I will tell you Brennan's story and give you his address.

Here is
Wiseman →
Wiseman was bald.

But Wiseman grew his head of hair with my wonderful hair growing fluid. All about Wiseman and how he did it, if you write. You will get his address, too.

FREE COUPON

Vreeland 1354 Euclid-Windsor Bldg.
CLEVELAND, OHIO

Please send me, entirely free, one full Ampoule of the same Wonderful Hair Fluid which grew your hair.

Become a Trained Radio-Technician

RADIO INDUSTRY PLEADS for "Registered" Radio Experts

MICHAEL ERT,
Pres. Michael Ert,
Inc., and Pres.
Wis. Radio Trade
Assoc. and First
V. Pres. Federated
Radio Trade Assoc.

Opportunity beckons as never before in the Radio industry. Good-paying positions, interesting work, a chance to become independent—radio offers all this and more to ambitious men who seize the opportunity NOW! Last year the radio industry took all our graduates and clamored for more. Thousands of trained men are needed for Radio Service, Radio Engineering, Radio Broadcasting, Television, Station-operation, and Radio Merchandising. And still radio is in its infancy. Great expansion is ahead. Get in this wonderful fast-growing field NOW!

Radio Trades Association Approve S. of E. Radio Graduates

The Wisconsin Radio Trades Ass'n now compels every radio service man to pass severe examinations, and become registered. Dealers are tired of expensive incompetent help. Radio trade associations the country over are planning to follow Wisconsin's example. The School of Engineering is the only institution in the country whose course is approved by a radio trade association. Graduates of the S. of E. are "registered" without examination.

Most Thorough Practical Radio Course in America

Here in this big splendidly equipped electrical school (from which Station WISN is operated) you can secure in three months the most thorough, the most compact and practical radio training offered anywhere. Covers entire field of radio! Complete Course includes Radio Laboratory Practice, Radio Telegraphy, Theory, Radio Transmission, Code Instruction, Electrical Mathematics, Service and Installation, Radio Sales & Merchandising. Daily broadcasting from WISN. All training is 100% PRACTICAL. You learn everything in three short months!

TELEVISION INCLUDED

Complete Radio Course also includes study of fundamentals of Television and latest developments in that gigantic new field. Enables anyone to keep up with progress of this new industry.

EARN WHILE YOU LEARN

Not only do we help place our men after graduation, but we can arrange for part-time employment that will cover part if not all of your living expenses while you are taking the Radio Course at the School of Engineering.

Send for FREE BOOK

Send today, without obligation, for FREE catalog describing the wonderful opportunities in radio, the three month Radio Course, and details of our Earn While You Learn Plan.

School of Engineering of Milwaukee,
Dept. PM429.

Without obligation, please send me FREE Book describing your 3-months "Radio-technician" course and full details of your "Earn While You Learn Plan."

Button Rupture

Newest Way

[Without Pressure]

I take pleasure in informing you through the use of the New Science System my rupture is entirely relieved. At the time I ordered your System I had been ruptured 20 years.
*M. P. Brumbaugh,
 Juniata, Pa.*
 I am writing to let you know that my rupture does not trouble me any more and I think in a little while it will be gone. Your appliance has all you claim for it. Before I got it I could work only part of the time. Now I can do almost anything.
Mrs. C. W. De Long, Gilboa, N. Y.

SCIENCE now advises discarding cruel steel springs, barbarous leg straps, and other harness that press against the rupture and thus prevent nature from healing it. A new sensible method has been perfected, after thousands of test cases, called Magic Dot—entirely different from any other way. Instead of “pressing” it “seals” rupture, and of course allows users to run, jump, bend and cough in perfect safety.

Breathes Air

With this 1-25th oz. device is a new kind of pad, air-porous and washable. It actually breathes air, and cannot slip off the rupture—a feature, you'll frankly admit, that is lacking in your present appliance. In fact, it is so superior and different that it is praised by physicians as “an entirely new departure.” Users report they have forgotten they are wearing it. But don't buy it yet.

See It First

By a special arrangement you can now have it sent to your home without obligation to wear it. Don't send a penny or order it now. Just mail the coupon for full description of “Magic Dot” and details of this unusual offer. Act now for quick relief. Write your name and address on the coupon and mail it today!

NEW SCIENCE INSTITUTE

2159 Clay St.

Steubenville, O.

New Science Institute,
 2159 Clay St., Steubenville, O.

Please send me free your illustrated book and sample of Airtex. Include also your offer which permits me to see the New Science System without cost or obligation.

ELECTRICITY PAYS.

I'LL TRAIN YOU AT HOME

to EARN BIG MONEY

\$300 A MONTH
Dear Mr. Cooke: You made me what I am. Working for the Cadillac Motor Co., making over \$300 a month.
C. L. Stachurski
2602 Wahlen Street
Hamtramck, Mich.

\$200 A WEEK
Dear Mr. Cooke: In two years I have jumped from \$25 a week to \$200 a week, and you got all the credit.
G. W. Schnupp
815 E. New Street
Lancaster, Pa.

NOW you make \$20, — \$25, — or \$30 a week. In the same 6 days, as a "Cooke" Trained Electrical Man, you could be making \$70 to \$200 a week, — and do it easier—not work half so hard.

Why, then, remain in a small-pay, no-future job? You can't make Big Money there. Get into Electricity. That's where the big money is being made, and that's where the big money always will be made, because Electricity is the biggest and fastest growing industry in the world.

I'll Train You At Home

I'll train you at home,—in your spare time. You work just as you are working now—at your same old job. But you learn Electricity every day, in an easy, simple, unforgettable way — **by doing.** And —

You Earn As You Learn

That's the way I teach Electricity — so that you can make extra money as you go along. That's why my Training is Practical. That's why my students are successful. That's why the "Cooke" trained man is the Big-Pay Man", everywhere, and always. \$40 a week is just an ordinary salary in Electricity. \$70 to \$200 a week is what thousands of "Cooke" Trained Men are earning.

L. L. COOKE
Chief Instruction Engineer

6 BIG OUTFITS AT NO EXTRA COST

Money Back if not Satisfied

That's what I agree to do. And you're to be the judge and jury, all in one. If you're not satisfied you get your money back—every cent of it. And back of me in this agreement stands the Chicago Engineering Works, a \$2,000,000 Illinois Corporation.

Nothing Like "Cooke" Training

Don't confuse other Training with mine. Don't be satisfied with anything but "Cooke" Training, the Training with 10,000 boosters. There is nothing like it anywhere. It stands by itself—alone in this field. This is the Training that Electrical men are praising—the Training that Electrical concerns recommend to their employees—the Training that a great engineering association has endorsed 100%, after a rigid investigation. It's the Training for you.

If You're Earning less than \$70 a week — Investigate

Don't wait a minute! Find out today why "The Cooke Trained Man is the Big-Pay Man", everywhere! Find out how "Cooke" Training will help you boost your pay! Mail coupon right now for my Big, FREE Book of Facts. Read the whole wonderful story. See the Six Big Working-Outfits I give you without extra charge. See the hundreds of pictures, the proofs, the Big-Pay letters of other "Cooke" Trained Men. Get this great free Book. Send for it today. Clip, sign, and mail coupon **right NOW!**

30 MINUTES AND 15 MINUTES Makes Old Cars Look Like New!

Not a
Polish—
Not a
Paint—
Not a
Cleaner—
Not a
Wax

An amazing Fluid has now been perfected that transforms old, shabby looking cars into smartly shining new ones in half an hour! You just flow ReNUZit onto any automobile with a piece of cheesecloth and the original color and luster of that car gleam like new again.

Brand New — Different

(Positively Guaranteed Not to Turn White)

Never confuse ReNUZit with ordinary paints or varnishes—its principle is entirely different. It is far superior because one coat brings back the glowing beauty of the snappy, well-kept motor car. Millions of car owners waiting for it. Harmless—Lasting—Sure.

Try ReNUZit Free!

We give you the privilege of testing ReNUZit right now without risk. Prove to yourself what a transformation it accomplishes with an old, faded, dull surface. Write quick for full details and Free Trial Offer.

The ReNUZit System

154 E. Erie St., Dept. 805-E. R., Chicago, Ill.

How I Made \$100,000 With a "Fool" Idea

Learn my money-making secret—Be a Real Estate Specialist—Start at home, in your spare time—Use my successful System—Free book shows how

"IT'S a fool idea!"

That's what my friends said, when I told them about my idea for starting a real estate business "on the side."

But with that "fool" idea I made more than one hundred thousand dollars net profit.

No matter who you are, where you are, or what your sex or present occupation, if you want to do what I did—if you want to get out of the \$25-a-week crowd and build up a high-class, money-making, business of your own—right at home—in your spare time—send at once for my free book which opens wide the door of the biggest and best money-making business opportunity you ever heard of in your whole life.

Use My Successful System

When I started in real estate, I tossed overboard all the hit-or-miss, haphazard, rule-of-thumb methods of the past, and put into operation a system of my own which is as superior to the old way as the modern Mazda lamp is superior to the tallow candle of our forefathers.

With little education—no experience—no influence—and less than five dollars capital—I started in my spare time and met with instant success.

If you want to follow in my footsteps—if you want to use my amazingly successful system—send for my free book now. It tells how I succeeded—how I have helped other men and women win big success—how you, too, can succeed—how

A well-known cartoonist's conception of my idea

you can have a splendid business of your own and make more money than you ever made before.

A Wonderful Business

Real estate—conducted my way—is a great business. It is as permanent as the earth itself. It is getting bigger and bigger as the country grows. It doesn't require years of study to learn like most other businesses and professions. It offers enormous earnings to ambitious men and women. Users of my system are making \$1,000—\$5,000—\$10,000—on single deals—as much as the average man gets for months and years of hard work. And the business is practically unlimited. Ten million properties are now on the market for rent, sale or exchange. And you can start with little or no capital—

right at home—in your spare time. I did. So did others. So can you. My free book tells you how.

Read These Records

Here are just a few brief extracts from the many letters received from happy users of my money-making real estate system:

"Made \$5,500 on first deal after getting your system."—Mrs. Evalynn Balster, Illinois (Former School Teacher). "Sold a lot by your methods in less than one hour and my commission was \$800."—J. A. Furguson, Florida (Former Dry Cleaner). "Sold over \$100,000 worth of property my first year with your methods."—H. D. VanHouten, New Jersey (Former Grocery Clerk). "Have sold thousands of dollars' worth of property your way. Have deals that will go beyond the \$300,000 mark."—Carrie Marshall, Mississippi (Former Housekeeper). "My first day's work in real estate netted me \$435. I recommend your system to anyone wishing to get into a pleasant and profitable business."—F. B. Bennett, California (Former Planing Mill Man). "Have sold one \$5,000 lot and 3 houses so far, with your system."—Mrs. B. H. Morehouse, New York (Former Housewife).

These are just a few samples of success that you will read about in my free book. Get it. Read it. Follow its instructions. Make big money my way.

Get Free Book Now

My big, new, illustrated book is filled with fascinating facts about my kind of a real estate business—what I did—what others are doing—what you can do.

Mail coupon right now and get this valuable, money-making information free. It doesn't cost you a nickel to find out what this book can do for you. So, act at once. You will never forgive yourself if you turn your back on this unusual chance to win big, business success. Address PRESIDENT, American Business Builders, Inc., Dept. D-44, 18 East 18 Street, New York.

\$1000 Reward

Here's the proof that this is the biggest money-making opportunity of all: ONE THOUSAND DOLLARS IN GOLD will be paid to anyone who shows us any other business course of any kind that has helped as many men and women make as much money in as short a time as our remarkably successful Real Estate Course.

Here's a... half-hour with Walter Hinton about Your FUTURE in AVIATION

HOW would you like to sit face-to-face with Walter Hinton and talk to him like this:
"Just what does Aviation offer ME?"

"How can I become a pilot?"
"What kind of 'ground jobs' are open?"
"What training is needed to get into the real-money class?"
"Why should I get into Aviation Now—instead of a year or two from Now?"
Would you like to put questions like these up to the man who was first to fly the Atlantic—first to fly from North to South America? If you would, send for "Wings of Opportunity."

Hinton Is Ready to Talk to You NOW

"Wings of Opportunity" is more than a FREE book. It is virtually a FREE interview with a world-famous aviator, and one of the Industry's recognized leaders.

In it, Lieut. Hinton shows you why Aviation offers the BIGGEST OPPORTUNITIES that men of this generation will ever see—and why those who wake-up, look and act-ahead NOW—will CASH IN.

You'll see how Hinton is preparing ambitious, far-sighted men right at home for real-pay jobs on the ground and in the air in all branches of Commercial Aviation.

Without sacrificing your present job or investing a lot of money you can get Hinton's help. That means the ground work training, PLUS his personal advice and cooperation and the FREE assistance of his Employment Bureau which is placing men in real jobs at real pay right along.

"Wings of Opportunity" tells you How and Why. If you are over 16 years of age send the coupon!

The "PICTURE WAY" Replaces Old-Fashioned Methods

**DRAFTSMEN
PAID
\$60 to \$100 a week**

Get Into This

BIG PAY WORK

*with my new
amazingly simple*

PICTURE-METHOD

At last—a quick, complete, fascinating way to learn Drafting, and learn it **right!** Experts acknowledge my new, simple, easy "Picture Method," to be the first new idea in teaching Drafting in 30 years. It's the most easily-grasped, sound and sensible plan ever devised for Home Study instruction—so clear, so interesting, so practical that almost before you know it, you're through—have finished—and are ready to go to work on a Big Pay Job.

Learn to Earn—\$60 to \$100 a Week

That's what the expert draftsman gets. And he's never out of work the year 'round—for he's the King-Pin of Industry—the man they've got to have. Not a wheel can turn, not a brick can be laid, not a wire can be strung, until the job has first been planned and drawn on paper by a draftsman. Why don't you get into work like that? Why don't you be a man they can't get along without—a Big Pay Man with a year 'round Big Pay Job? You can—it's easy—I'll show you how!

I'll Quickly Prepare You for Drafting

With my new copyrighted "Picture Method," I'll help you get ready for a Big Pay Draftsman's job so quickly you will be astonished. Spare time only needed. With my method—you just watch my hands in the pictures—you see how it's done, and you do it yourself almost **automatically**. It's amazingly simple—yet so thorough and complete you learn Drafting from A to Z—learn it so you can sit in with the best of them on the Jobs that pay Big Money.

Investigate First

Don't sign up for any Drafting Course until you've investigated my amazing new "Picture Method." Mail coupon for Big FREE Book. See my great Earn-while-Learning Plan—see the big Professional Drafting Outfit you get at no extra cost—learn about my Nation-wide Job Service—my positive Money Back Agreement. Mail coupon NOW!

"How I Licked Wretched Old Age at 63"

I Quit Getting up Nights—Banished Foot and Leg Pains . . . Got Rid of Rheumatic Pains and Constipation . . . Improved Embarrassing Health Faults . . . Found Renewed Vitality

"At 61, I thought I was through. I blamed old age, but it never occurred to me to actually fight back. I was only half-living, getting up nights . . . embarrassed in my own home . . . constipated . . . constantly tormented by aches and pains. At 62 my condition became almost intolerable. I had about given up hope when a doctor recommended your treatment. Then at 63, it seemed that I shook off 20 years almost overnight."

Forty—The Danger Age

These are the facts, just as I learned them. In 65% of all men, the vital prostate gland slows up soon after 40. No pain is experienced, but as this distressing condition continues, sciatica, backache, severe bladder weakness, constipation, etc., often develop.

PROSTATE TROUBLE

These are frequently the signs of prostate trouble. Now thousands suffer these handicaps needlessly! For a prominent American Scientist after seven years of research, discovered a new, safe way to stimulate the prostate gland to normal health and activity in many cases. This new hygiene is worthy to be called a notable achievement of the age.

A NATIONAL INSTITUTION FOR MEN PAST 40

Its success has been startling. Its growth rapid. This new hygiene is rapidly gaining in national prominence. The institution in Steubenville has now reached large proportions. Scores and even hundreds of letters pour in every day, and in many cases reported results have been little short of amazing. In case after case, men have reported that they have felt ten years younger in six days. Now physicians in every part of the country are using and recommending this treatment.

Quick as is the response to this new hygiene, it is actually a pleasant, natural relaxation, involving no drugs, medicine, or electric rays whatever. The scientist explains this discovery and tells why many men are old at forty in a new book now sent free, in 24-page, illustrated form. Send for it. Every man past forty should know the true meaning of those frank facts. No cost or obligation is incurred. But act at once before this free edition is exhausted. Simply fill in your name below, tear off and mail.

Learn Art This Quick Modern Way

"Federal systematically brought my work to a professional standard. Quite a bit has been purchased and exhibited."

DAVID H. POOLZ

"I opened my own Commercial Art Studio, and am earning at the rate of over \$10,000 a year. Federal Schools will help anyone who loves the work."

EDWIN McTEER

"I feel I was indeed fortunate in making the Federal School connection as it certainly was a step on the road to bigger things."

HOWARD BLANKENHORN
Head Artist Knickerbocker Press

"Federal Schools made my success possible through their training and cooperation. I am earning \$75.00 a week as an illustrator."

ART STANON

"Am earning \$5200 a year, and I have just started. The practical short course I took with Federal School made my success possible."

LOYD SCHLEY

"Before I finished the Federal Course I received a position. There are few art schools in the country that give as good training as does yours."

E. L. DEETER

"I have had my cartoons in Collier, Saturday Evening Post, Life and several other magazines. A thousand thanks and much praise to your school."

RAYMOND THOMPSON

COMMERCIAL ART needs more men! Many fine positions that pay **BIG MONEY** are waiting for trained men to fill them. Thousands of advertisers are buying hundreds of thousands of dollars worth of art work. Newspapers and magazines need illustrators and cartoonists, and will pay them **BIG SALARIES**. Year 'round work—a steady income—**SUCCESS**—all await the man who realizes the wonderful opportunities an art career holds in store for him.

Learn in Your Spare Time at Home

You don't have to be a "born genius" to become a successful commercial artist or illustrator—if you like to draw, you can soon develop and train your natural talent in your spare time at home. Hundreds of men have climbed the ladder of success to **INDEPENDENT INCOMES** with the help of a Federal Course. Read what some of these men say—then make up your mind that **YOU** can do it too.

Federal Students Make Good Incomes

The earning capacity of commercial artists and illustrators is practically unlimited! Federal Students are making \$2000, \$3000, \$4000, \$5000 and \$6000 a year—some even more. Many have earned more than enough to pay for their entire Federal Course before they finished it. The opportunities are there if you will only prepare for them! You too can leave behind the drudgery of monotonous toil and labor for a pleasant, good paying position. Youth is an asset—experience you can gain while you are earning—investigate this wonderful chance **AT ONCE**.

Which of These FREE Books Do You Want?

The Federal Course in Commercial Designing, which teaches you to make drawings and designs for magazine and newspaper advertising, posters, booklets, etc., is described in the booklet "YOUR FUTURE." The Course in Illustrating and Cartooning, which includes lettering and window card writing, is explained in "A ROAD TO BETTER THINGS." On either of these courses, your work will receive individual, personal criticism—you will be quickly trained so that you can begin earning money in the shortest possible time. **DON'T DELAY**—get started now—choose the course you want. Check the book you want and **MAIL THE COUPON TODAY!**

Learn RADIO for BIGGER PAY!

J. E. Smith,
President

Jobs paying \$50 and all the way up to \$200 a week are waiting for the Radio-trained man. Get into the new, growing Radio profession if you want to earn more money, have bigger opportunities for the future. I will train you at home in your spare time. Previous experience not needed—you learn quickly in a simple, clear and unforgettable way. Grade school education, or even less, is enough to start.

**Earn \$15, \$20, \$30 Weekly
Right Away "On the Side"**

You learn it all by doing. So practical is the training you get that almost from the time you start you can put your new knowledge to use. Little Radio jobs I'll show you how to do in your spare hours can bring you as much as \$15, \$20, \$30 extra cash, weekly, after you get well started. This Radio training of mine is the one that's world-famous as the "Course That Pays for Itself." Many of my students put aside enough extra cash to start their own Radio business on graduation—all earned by this spare-time Radio work done while they are learning.

64-Page Book Sent FREE

Free—a 64-page book that tells you all about the bigger opportunities in Radio—the big money to be earned—how I'll prepare you thoroughly and completely for the Radio profession—how to make spare time cash. Gives all information about the six big outfits of Radio material I send you. You can build 100 Radio circuits with these outfits, yet there's no extra charge. Surprisingly low tuition fee can be paid in small monthly amounts. Get the proof. Radio needs you—learn what it has to offer you. No obligation for the book—it's sent free—just mail the coupon today.

Learn AVIATION

GET THOROUGH TRAINING NOW!

From A Practical School with Modern Equipment

Our School Registered, All Instructors and Airplanes Licensed by U. S. Government

All Airplanes used by us for both instruction and passenger service are planes licensed by the U. S. Government and our instructors are U. S. Licensed Transport Pilots and U. S. Licensed Mechanics. Our Chief Instructor is Lieutenant Murel R. Bouse, former instructor at the U. S. Air-Service Technical School of Chanute Field, and each and every one of our pilots has more than 1500 hours in the air to his credit.

We Guarantee to Qualify Our Students for Immediate Positions

There is money for you in Aviation, if—you get thorough training NOW! Our courses will give you this training—they cover everything about planes, motors, their operation, maintenance and construction. Everything a pilot or mechanic must know to secure a good-paying position. We guarantee that upon completion of a course at our school you will have all the knowledge necessary to qualify you for an immediate position in the particular branch of Aviation for which you have trained, whether on the ground or in the air. Our equipment is new and of modern design, subject to daily U. S. Government Inspection. (Most schools do not have a resident U. S. Government Inspector on the field—think what this means to you.)

ON THE GROUND

To make our ground course thorough, intensive and complete it has been patterned strictly after the course of ground instruction given by the U. S. Government. It covers complete theoretical instruction and practical shop training in Airplane Structure and Repair of various type planes, Aircraft Welding, Wing and Fuselage Covering and Doping, Motor Construction, Adjustment and Repair (Water and Air-Cooled Motors), Motor Testing and Trouble Shooting, Airplane Instruments, Aerial Navigation, etc. Instruction is given on every type of motor—the OX-5—to the larger types such as the Wright Whirlwind.

IN THE AIR

We guarantee sufficient hours in the air to make each student master of his ship; pilot it safely and efficiently by himself. Instruction is given by U. S. Licensed Transport Pilots on four different types of approved modern aircraft—Eagle-rocket Biplane with OX-5 Motor, Eagle-rocket with Siemens-Halske Radial Type Motor, Ryan open cockpit Monoplane powered with Hispano-Suiza (Hispano) Motor and Ryan four passenger closed Cabin Monoplane powered with Wright Whirlwind Motor.

THOROUGH INSTRUCTION AT LOW COST

We teach you by actual flying and practical instruction; no long course needed. No student bond required. Our ground course gives thorough instruction in ground and qualifies you for a position as motor and plane mechanic, rigger, electrician, welder, or any other ground position, or you can take the course combining ground instruction and flying which will qualify you for an industrial, limited commercial or transport pilot. The cost is low considering daily flying, the thoroughness of theoretical and ground instruction on latest modern type planes, Wright Whirlwind and other standard motors. Our big new book "AVIATION and YOU" tells all the facts—write for it TODAY!

"Trouble Shooting on the Flying Line"

This is a vital and essential part of the Von Hoffmann training on all types of planes. It is additional training of this kind which secures and holds positions in Aviation for Von Hoffmann Graduates.

Trained Men Are Needed

The training which the Von Hoffmann student receives is the exact training which he must have to qualify for immediate positions on the ground or in the air. Our courses have been laid out with a single object in view—to give thorough training in all branches of Aviation. Commercial Aviation needs men and there is an ever increasing demand, ONLY for those who have been properly trained—Von Hoffmann gives you this training.

HERE IS PROOF

Snow Shoe, Pa.
Sept. 27, 1928.

VON HOFFMANN AIRCRAFT SCHOOL
ST. LOUIS, MO.

Gentlemen:

Your kind letter of August 19th received for which please accept my thanks and which still proves that your school does not drop interest in the welfare and activities of its graduates even after leaving the school.

I consider the Von Hoffmann School one of the best because of the thorough training received from your efficient and capable instructors from the ground course to the pilot courses. So well has your school become known by the training given to your past graduates that even before finishing my course I had several offers, namely, one from Wayne, Pa., Altoona, Pa., and the other from Poughkeepsie, N. Y., which I now hold at the present time.

I am certainly proud that I received my training from your school and I will be glad at any time to give detailed information direct to any person whom you see fit to refer to me. Again thanking you for the interest you have taken in my future activities as to steady employment, I beg to remain,

A former student,
(Signed) LOGAN M. KELLEY, JR.
This is just one of the many letters we have received from former students. We will be pleased to send copies of them upon request.

MAIL COUPON NOW!

If you are interested in Aviation, you should know the necessary physical qualifications and what is required by the Government for a mechanic's or pilot's license. BIG MONEY IN ELECTRIC REFRIGERATION

AMERICA'S biggest new industry—electric refrigeration—needs men to fill jobs paying \$200 to \$1,000 a month. The "cream" jobs are going begging while the field grows by leaps and bounds. The money powers of the country—General Motors, General Electric, and others—are investing billions. Millions of machines are being sold to homes, theaters, factories, stores, etc. Thousands of jobs are open in production, installation, service and sales which ordinary mechanics can't fill without special training in electric refrigeration.

EASY TO LEARN AT HOME

Learning electric refrigeration is now amazingly simple thru a new easy home training endorsed by authorities. Highly praised by Servel, Kelvinator, and other leading refrigerator manufacturers. **GET FREE BOOK.** See how easy you can become a highly paid refrigeration expert. Mail coupon to Utilities Engineering Institute, 3120 N. Clark St., Dept. 14, Chicago. The only exclusive electric refrigeration school in America.

42 MILES ON 1 GALLON OF GAS

Walter Critchlow, 4N-805 Street, Wheaton, Ill., has patented a Vapor Moisture Gas Saver and Carbon Eliminator for all Autos and Engines that beats any ever got out. Old Fords report as high as 42 miles on 1 gallon. New Fords 40. Other makes report amazing increases of 1/4 to 1/2 more. Mr. Critchlow offers to send 1 to introduce. Write him today. He also wants County and State Agencies everywhere to make \$250 to \$1000 per month.

"My Muscles Just Kept on GROWING"

Former weakling tells of amazing change. Wins \$1,000 for greatest improvement in physical condition and muscular development. Nationwide interest shown as new contest starts to demonstrate **MIRACLES IN MUSCLE** wrought by famous Titus System. *Your* chance to win \$1,000 and gain superb **HEALTH** and **STRENGTH**.

BEFORE Here's how Daniel Gully used to look. You'd never think that flat-chested, flabby weakling had a chance. But see what happened when Titus got to work on that body of his!

30 DAYS AFTER Now look at Danny after one short month of Titus Training—a **NEW MAN**—superbly muscled, strong as an ox, with the speed and agility of a **PANTHER**.

COME a-running, you young fellow—and you oldster, too! Here's the chance of a lifetime. Swap your old body for a new one! Get a brand new outfit of **MUSCLES**. I'm making men over—changing weaklings into huskies. Get a load of the stuff that makes **HE-MEN**. Take a whack at my next **THOUSAND DOLLAR FIRST PRIZE** and other big cash prizes. Everybody has same chance—awards are for greatest **IMPROVEMENT**.

Read Daniel Gully's Own Letter

Danny won my last Muscle-Building Contest. Take a look at his pictures. See what I did for him—how I re-built that sickly, puny body. Here's what Danny writes:

"I am mighty proud to be the Winner of the 1928 Titus Contest. I never expected this great honor. I was sickly and puny, had no strength, no energy, no ambition. I was **ashamed** of my body. I thought Titus Training might help me—but I had no idea it would make me a **NEW** man—and in such a short time. I simply followed your instructions and my muscles just kept on **GROWING**. I was the most surprised man on two feet!"

Now I Want You

Yes, **YOU**, and nobody else! I've worked my **MIRACLES** in **MUSCLE** for thousands of others—and it's **YOUR TURN** NOW. Boy, you'll get the thrill of a lifetime when you see those big, rippling muscles growing out all over your body.

A Few Minutes a Day—at Home!

I **GUARANTEE** to put 2 inches of solid muscle on your arms; to increase your chest 5 inches; to develop your neck to a size larger collar; to add 3 inches of powerful development to your thighs; 2 inches to your calves; to give you a trim, slim waist-line.

And 60 Days Later

the **FINISHED** **ATHLETE**—a man built as only Titus builds them. Titus Training not only gave him **BIG MUSCLES** and **STRENGTH**. It gave him grace and poise—that quality of perfect proportion that you'll find in every great athlete, whether prize-fighter or sprinter.

FREE! Miracles in Muscle

Wear This Medal

"I Won't Be Clerk Any Longer!"

How Higher Accountancy Helped P. S. Blessing Increase His Salary 250%

For four years Philip S. Blessing worked hard as a clerk and got nowhere. He learned that every successful man knows—opportunity without trained ability means nothing. He decided to get that trained ability!

Within fifteen months after he started with LaSalle in Higher Accountancy, Mr. Blessing was made Assistant Treasurer of the Lancaster Brick Company, Lancaster, Pa., and his salary was increased 137 per cent. Since then it has increased even more, until now it is 250 per cent larger than when he enrolled. His employer, Clarence B. Horning, General Manager, adds the vital point: "We believe he has many successful years ahead of him. His business progress has only begun."

Send for This Book—It's Free

Are you ambitious to make a real success in business—to fit yourself for positions paying \$2,000, \$5,000, \$10,000 a year and even better? Then you will find LaSalle's 64-page book, "Accountancy, the Profession that Pays," of the greatest help and inspiration—and—LaSalle will send it to you FREE. For the sake of a brighter future, clip and mail the coupon NOW.

— Find Yourself Through LaSalle! —

FOREMEN!

FACTORY WORKERS

AND ALL MECHANICS

\$1.98

(Worth \$25)
**Lecture Course
Complete in 1 Volume**

**Send
No Money**

Every foreman, factory worker, manager and ambitious mechanic will find a gold mine of inside information in "*The Modern Foreman*" by Robt. Grimshaw. The 28 chapters of this great work are shop talks pointing the way to success, efficiency, better pay and the job higher up. A complete study course in leadership; a handy, daily reference and guide.

SUBJECTS COVERED INCLUDE:

The Magic Wand of Efficiency, The New Type of Foreman, Teamwork, The Kicker, The Agitator, Bonus Plans, Self Improvement, How to Handle Men, Hiring and Firing, Assigning Men to Jobs, How to Keep Records, How to Cut Out Waste of Time and Materials, New

Inventions, Modern Methods, The Inspector, Health and Character Requirements, What the Foreman Should Know, Mathematics, Business Law, The Foreman as "Top Sergeant," Factors of Success, Leadership, What is "Labor"? Time and Idleness, Knowledge is Power, "Morale," The Value of Mistakes.

Special Sale Price

"*The Modern Foreman*" has 297 pages, quick reference index, many tables, diagrams, illustrations and forms; big type, easy to read and understand; rich binding, gold stamped. Size 6x9x1 $\frac{1}{4}$. Reg. price \$2.50. Our special sale price \$1.98. Send no money. Satisfaction guaranteed. Mail this coupon **TODAY!**

GREGG PUBLISHING CO.,

20 W. 47 St., New York, N. Y.

Send me "*The Modern Foreman*." I will pay postman \$1.98 and postage on arrival. My money is to be refunded if I am not satisfied.

"We pay him \$100 a week"

"AND he's worth every cent of it. Came here several years ago asking for a job. He got just that—a small job at a small salary.

"Then I forgot about him—hardly knew he was on the payroll until I got a letter from the International Correspondence Schools telling me that he had enrolled for a course of home study. It was remarkable the way he went ahead.

"We pay him \$100 a week now and he's going to get even a larger salary soon."

How do you stand when your employer checks up his men for promotion? Does he think of you? Is there any reason why you should be selected? Ask yourself these questions fairly. You must face them if you expect advancement and more money.

One hour after supper each night spent with the I. C. S. in the quiet of your own home will prepare you for the position you want in the work you like best.

SILVER WINGS

ACTUAL SIZE

WANTED ANOTHER 1000 Readers to Earn \$500 to \$1,000 per Month

That's what CLARKE FLORKRAFTSMANSHIP PAYS

There's a Big League Job at big pay waiting for you in Clarke FlorKraftsmanship. If you're worrying about money, if you're a slave to a time clock, a cog in somebody's business machine, learn about FlorKraftsmanship today.

Quit the wage struggle and step out after \$500 to \$1,000 per month. Over 1000 Popular Mechanics readers have succeeded at FlorKraftsmanship. They started by answering an ad like this. Be among the *second* 1000 who are starting out now after this big pay. Get the facts today. They're yours FREE.

No Training Period Earn at Once

Clarke FlorKraftsmanship isn't a course of study. In 15 minutes you learn how to operate the Clarke. Then you start right out as a FlorKraftsman. You get paid for the first day's work you do—and the rate is \$25 to \$75 a day. Sanding floors is easy work. The Clarke operates like a vacuum cleaner, and is almost as easy to use. No dust, no muss, either when you are sanding an old floor to look like new or at work in a new house getting floors smoothed before the painter comes.

Remarkable Increases in Pay

Here's word from men just like you—many of them Popular Mechanics readers—who answered Clarke ads a few months ago. Read what they say about FlorKraftsmanship and what they earn at it.

R. M. Brandy, Columbia, Mo., writes: "I received my Clarke Wednesday morning, operated it on my own work in the afternoon and on Thursday I did a job and made \$25.00 for the day. I think it a great machine and am well pleased with it." F. A.

CLARKE SANDING MACHINE CO.
Dept. T-24, 3831 Cortland St., Chicago, Ill.

Originators and, for 12 years, Manufacturers of Portable Sanding Machines

Lock, Baldwinsville, N. Y., says: "I have no fault to find with the Clarke. It does the work you said it would and does it fine, too. It's paid for itself already and the beauty is you don't have to have a dray to haul it around." Martin Koelsch, West Bend, Wis., writes: "Being absolutely positive in my assertions that the Clarke has no rival in its performance of quality or quantity work, I am ready at all times to recommend it to any one desirous of buying a sanding machine." Robert P. Thomas, Surf City, N. J., says: "I have paid for it on the work contractors have given me."

Time to Act

These successful men had no more training than you. Get into the right work and you can have their pay and their independence. This offers you the way—all the facts about Clarke FlorKraftsmanship—absolutely FREE.

We can't put the whole story into this short ad. But we have printed a book, "Pointing The Way," which tells precisely what you want to know. It gives you all the facts about how to succeed quickly as a FlorKraftsman. Tell us, in the coupon, where to send your copy. No obligation. No cost. Mail coupon today.

Can you get by with one shave a day?

A LONGER-LASTING SHAVE—because it's a closer, smoother shave—is possible. We willingly prove it. Colgate chemists have achieved a unique lather. Different because of small bubbles. A scientific way to intensify the moisture content of lather. A principle which prepares the beard for closer, cleaner shaving. Hence a longer-lasting feeling of being well-groomed.

Two vital facts—easily proved

Millions of men prefer Colgate's because they've found—as you will—that as soon as you lather up with Colgate's small-bubble lather, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard.... crowd around each whisker—soak it soft with water.

Instantly your beard gets moist.... easier to cut.... scientifically softened right down at the base.... then your razor can do its best work.

Ordinary big-bubble lathers have more air, less moisture. A comparison will prove Colgate superiority. Note our coupon offer of a week's free trial. We will send also, a sample of After-Shave, a new lotion—refreshing, delightful—the perfect shave finale.

A week's shaves
FREE

The New Flying Bath Tub

Ass. Lane Training

A QUEER-looking device holds the spotlight at the army air corps' experimental laboratories at Wright field, Dayton, Ohio. For lack of a better name it has been called the "flying bathtub," since some of the airmen compare it to a winged variety of the household article.

The new invention, upon which Lieut. Albert I. Hegenberger, among others, has been working for over a year, was designed to take the place of what has been known as one of the most curious devices man has invented in his efforts to rival the birds of the air—the Ruggles orientator—which, placed upon the ground, is

intended to give the student flyer the "feel" of a plane long before he attempts to maneuver a ship aloft.

Made from the cockpit of a plane, it is suspended in three concentric rings. With increasing speed, the instructor, from his chair below, manipulates the plane into the desired upside-down or sideways position. Immediately thereafter, it is the student's job to maneuver the machine back again to normal. The judgment with which he does so determines in large part the rating he receives, or rather has received, since the device is now virtually obsolete.

Ver. John A. Poppin, Navy flight surgeon
Cont. James H. Miller 1906 H. St.
D. W. Washington D.C.

2293
530

The flying bathtub, or "primer plane" as some call it, is similar in size to the Ruggles apparatus, but the new device goes many steps beyond it. The tub contains both a propeller and an engine, and can therefore simulate to an amazing degree every one of the main maneuvers a real plane can execute.

It consists of a small fuselage body with rudder, elevator and aileron, or movable flat foil that serves to keep the ship from wobbling from side to side. These surfaces are fully controlled by the operation of standard airplane apparatus installed in the fuselage body, and the plane itself is sent flying by means of a tractor propeller driven by a fifteen-horsepower electric motor, mounted forward in the fuselage of the bathtub in the same fashion as is the engine in the actual airplane.

The plane itself is mounted in a double-tripod frame, twenty feet high, this height offering a sense of disassociation from the ground besides a certain amount of horizon perspective. While the student becomes familiar with the features of flying that at first are apt to be confusing—the blast of air, the noise of the propeller and

the rocking, tipping motions of flight—he also is becoming used to the response of actual flying controls.

With his feet on the rudder bar and control stick in hand, the student flyer can cause the primer plane to assume any position a plane can take in actual flight and gain the feel of the controls and the different movements of the ship with the assurance of safety while he is learning. An instrument board, equipped with compass, clock, air-speed indicator, inclinometer, bank-and-turn indicator, and the rest of the standard flight instruments, enables him to form the habit of automatic reference to the board in all attitudes of flight.

It is pointed out that, from the instructor's point of view, the device will be extremely helpful. He will be able to observe closely the student's reactions, and

his natural adaptability to flying. If he notes some fault in manipulation of controls or wishes to demonstrate a certain point, then he may stop the plane at any time and give the student advice.

Then again, by

A Steep Left Spiral, Top, and a Glide, Bottom; in the Center, the Nine Pens of the Poppen Recorder, Which Automatically Charts the Results

Capt. J. C. Miller

*Jamaica 534
New York*

placing a hood over the student's head, shutting off the horizon, sky and ground, blind flying may be taught by the process of having the student attempt to regain, from various attitudes, normal position by simply referring to his instruments.

near
**MOUNTAIN RANGES UNDER SEA
FOUND BY ECHOES** *2266*

Echoes have just aided in two important marine discoveries that may help explain an ocean mystery, the origin of the Humboldt current. By firing detonating shells from a twenty-foot brass shotgun and determining the time the echoes took to return from the floor of the sea, scientists on board the non-magnetic yacht "Carnegie" have found two new ranges of mountains under the ocean. One is more than a mile high above the sea floor and 100 miles off the coast of Ecuador. The other rises to a height of 9,750 feet and runs northwest and southeast, 400 miles to the north of Juan Fernandez island. It is believed that this range may be a contributing cause to the Humboldt current and may also be a remnant of the sunken lands whence sprang the mysterious Easter Island civilization.

New York Times 2/3/29
**ROTARY PLOW ON MOTOR TRUCK
KEEPS SNOW FROM ROADS**

Roads around Leadville, Colo., were kept free from snow last winter by means of a rotary plow at the head of a ten-ton, four-wheel-drive motor truck. The blades of the plow were so adjusted that the snow was drawn inward and forced out through an inclined spout at the top. The truck is steered from either end, has a sheltered place for the two operators, with a small coal-burning stove to furnish heat, and when there is no snow, is used for hauling road graders and other high-way units.

Motor Truck with Rotary Plow That Has Kept Colorado Roads Free of Snow

Model Plane with Double Propeller That Is Expected to Increase Power and Give Steadier Flight

**TWIN PROPELLERS ADD POWER
AND STEADY PLANE**

Increased power for the airplane and steadier flying are said to be achieved with a double propeller which has been demonstrated in a small model. The two are placed within a few inches of each other and, in operation, are reported to produce a gyroscopic effect. Slots in the hubs permit changing the pitch of the blades.

**TON WOULD GO IN A MATCH BOX
ON DISTANT STAR** *2277*

So dense is the material on a companion star of Sirius that a match box full of it would weigh a ton. It is 6,000 times as dense as water. This is one of the interesting facts revealed by the new telescopes. The 100-inch reflector at Mt. Wilson observatory is to be surpassed in a few years, it has been announced, by one with a 200-inch mirror and a tube probably not less than eighty feet in length.

Buoy on Swimmer's Back Contains a Line and Floats, Should Wearer Sink, to Aid in Rescuing Him

BUOY WORN BY SWIMMER AIDS IN RESCUES

So that life-savers quickly may be able to locate swimmers who have become submerged, a small aluminum float, which remains on the surface when the body sinks, has been introduced. It is attached by strong fishing line and is so arranged that it is released and the line unwound as the wearer sinks. The buoy is painted a brilliant color to increase its visibility, and the line can be used to pull the body up.

HARVESTER FOR SMALL FARM CUTS REAPING COST

Harvesters that cut and thresh grain in one operation, until recently, have been practical only on large farms. Now, an outfit suitable for the small grower has been introduced which enables him to cut and thresh an acre of grain in less than twenty-five minutes and at an average cost of less than

Harvester-Thresher for the Smaller Grain Grower; It Cuts and Threshes an Acre in About Half an Hour

fifty cents an acre. The machine is pulled by a tractor and operated by a gasoline motor. It is compactly and solidly built, the grain being collected in a large bin at the top, from which it can be sacked or dumped in wagons. On larger farms, two or more of these outfits can be used at one time. The average farm tractor is able to pull two of them.

EXPERT BELIEVES OLD MASTER WORKED FROM REFLECTION

Study of the work of old Dutch painters, including Vermeer, of Delft, who lived between 1632 and 1675, has convinced Mr. R. H. Wilenski, a noted English expert, that they worked, at least in some instances, from reflections in mirrors. One of Vermeer's paintings, "The Love Letter," which hangs in the Rijks Museum, Amsterdam, has been supposed to be a picture of two models as seen through a doorway. Wilenski, however, points out that there is no sign of door and frame, and certain peculiarities of perspective in the chair on the right and the wall on the left indicate it may have been made from a reflected image. A diagram on the opposite page shows how such a picture could be painted. With such an arrangement Vermeer could paint a composite picture of the two models, and of objects which were placed behind him. The arrangement of the two reflecting mirrors would permit the artist to compose a picture in one plane before actually starting to paint, by merely moving the objects about until a suitable composition was found. A reducing glass fitted with cross threads also would allow him to auto-

atically scale the proportions. Gerard Dore used such a device. Vermeer's work is noted for the smoothness of his technique and the transparent shadows which would result from reflection of interfering light beams.

H

Here is good news for boys who object to the vigorous ear scrubbing their mothers sometimes command. According to New York medical authorities, there is danger in the process, for soapsuds and other foreign substances may be forced into the exterior auditory canal or the skin of the ear may be injured. They point out that the ear is a delicate organ and that nothing should be placed in it

in the form of a medicine except under the direction of a physician. A slight injury may develop into serious trouble, they say. In washing children's ears great care should be exercised. A soft cloth should be used for the operation. Another danger lies in blowing the nose too vigorously, because secretions may be carried into the middle ear, resulting in an infection.

2267

Lighter and stronger airplanes are seen as a possibility in the development of a process for coating paper, silk, wood and other materials with metal by an electrochemical method. Experts point out that, if the system proves successful, planes with the strength of metal could be made from much lighter materials.

New York Times 2/5/29

So that the gulch in which it was located could be filled to make a level street, a frame church in Los Angeles was recently raised twenty-four feet on a scaffolding. The structure was twenty-four by seventy feet and was elevated without mishap. Dirt was piled in around the timbers and, in a short time, the church again was resting on solid ground.

**PLANE RESCUES WOMEN
FROM BESIEGED CITY**

Women and children were taken safely from a besieged legation on the Indian frontier recently during a rebel uprising, when armed soldiers in a troop-carrying airplane went to their rescue. Infantrymen, in constant touch with forts by radio, guarded the refugees as they were taken to safety. The plane was of a special army type with a top speed of more than 100

miles an hour and a cruising radius of 400 miles. A group of five such ships can

carry 100 soldiers and quickly reach districts where trouble has sprung up.

**MORE USES FOR WOOD NEEDED
TO REDUCE WASTE**

To effect greater conservation, there should be more uses for wood, according to Dr. Julius Klein, of the department of commerce. He explains that a more efficient utilization of the material would make it more profitable for growers to plant and raise trees. At the present time, only the choicest parts of the tree are used and most of the rest is wasted or at least not used to best advantage. Chemical processing of wood, the manufacture of plywood and end-matching of lumber are among the methods that have

been developed along the line of more thorough utilization. Doctor Klein urges consumers to buy more short lumber whenever possible. Large quantities of lumber in this form are burned up each year because the mills cannot sell it. A further saving is realized in end-matched flooring. End-matched joints meet anywhere, on or between the joists or other supports so that less cutting is necessary. Development of processes for obtaining valuable by-products from wood, such as synthetic camphor, artificial silk and wood alcohol will also promote conservation and encourage tree raising, Doctor Klein points out.

Floating in Air, Restrained Only by Celluloid Guides, the Cobalt-Steel Magnet Bar Conquers Gravity through Magnetic Repulsion

A NEW form of geometry, providing equations which may furnish proof that there is only one substance in the universe, has been developed by Prof. Albert Einstein. Fitting in between the Euclidean geometry, familiar to every school boy, and the Riemannian geometry used by Dr. Einstein in working out his famous theory of relativity, the new mathematical laws which he now proposes go a long step farther in extending the natural results of relativity.

For his new equations are based on the assumption that gravitation and electricity are the same thing. That heat and light are related was discovered early in the history of mankind. That heat and energy were related was discovered next—a discovery that was for a long time doubted, though now every form of engine is based on it. One by one science proved the in-

terrelation of light, heat, energy, matter, space, time, gravitation and electricity, until only one factor was left—the specific relationship of the last two. And, if the new Einstein equations stand the test of scientists, it will be proved they are the same thing.

The new geometry, while it seeks to reduce all physics to one law, leaves one problem to be solved, and its success probably depends on further development to bring the theory of atoms within its scope. Doctor Einstein took a step in that direction in 1927 in two papers in which he attempted to define the laws of motion of atomic particles in the gravita-

tional field. When the theory of relativity was announced it was stated not more than twelve men in all the world were sufficiently educated in higher mathematics to fully interpret it. Like its predecessor, the new theory—six brief pages representing ten years' work—is full of equations that only a few scientists will be able to interpret.

But, while the theory itself is almost incomprehensible to the layman, it opens a field for fascinating speculation. Since it is possible now to insulate against electricity, it follows that, if electromagnetism and gravitation are the same thing, it may be possible some day to insulate against gravity. If that ever comes to pass, motorless aircraft may ride the skies, people may step out of skyscraper windows without falling to the ground, and a trip to the moon becomes theoretically

Theory

Is This the Airship of the Future? A Motorless Craft Flying through Space because Insulated against Gravity; Einstein's New Theory Opens This Field to Speculation

possible. Those are some of the avenues of speculation suggested by Dr. H. H. Sledon, head of the department of physics at New York University.

Since Newton first proposed the law of gravity—based, according to the story, which probably is not true, on the falling of an apple which struck him while he slept beneath the tree—science has been seeking some way of upsetting that natural law. The gravitational theory, as it was developed, assigned all movement in the universe to the attraction of masses. The planets were held in their courses by the attraction of the sun, and their orbits were made to deviate from a circular path

by the mutual attraction between them.

Then Einstein developed the theory, which is now elaborated, that instead of each body, through its mass, causing everywhere in space a certain effect known as gravitation, the latter effect manifests itself only in the immediate surroundings of the body in its gravitational field or area. That, according to Dr. Bruno Borchardt, of the Prussian Academy of Science, was the chief development of the theory of relativity. According to this theory, he says, "each body with its gravitational area acts on space in such manner as to shape or reshape it. In other words, space can no longer, as before, be

Einstein's Work Has Been Closely Connected, Since the Original Theory of Relativity, with the Measurement of the Speed of Light by Prof. A. A. Michelson, of Chicago University

considered as something absolute, such as time used to be regarded by us."

The confirmation of this theory left two general problems unsolved, according to Dr. L. L. Whyte, the British physicist. The first was its extension to include the phenomena of electromagnetism, and the second was the correlation of a continuous "space-time field" with the facts of the atom theory. Doctor Einstein's latest achievement probably is the best fusion of electromagnetism and gravitation that can be accomplished without considering atomicity, he adds. Eventually it may be necessary to invent still another system of mathematics to take the atoms into the fold and finally reduce all physics to a single law. Recent theoretical advances in atomic physics may make this possible within a short time.

Science has known for a long time that the repulsive force of magnetism when two magnets were placed parallel was theoretically great enough to overcome gravity, provided magnets of sufficient strength could be used. Recently engineers of the Bell Telephone laboratories and the Western Electric company—the manufacturing unit of the Bell system—found that a cobalt-steel alloy, invented some years ago by a Japanese metallurgist and now widely used in telephone parts, had magnetic strength to do just this.

When one of the bar magnets made from this alloy is placed above a similar bar, and constrained by guides to that position, the repulsive force is so great

that one bar will be kept floating in the air, unsupported by any visible force. The repulsive force exerted between the two magnets is practically equal to the gravitational force on a single magnet, so that one overcomes gravity. As the repulsive force varies inversely as the square of the distance, it is possible to calculate the magnet strength needed to support a given weight at any given distance.

Announcement of this experiment was confused in the public mind with the use of permalloy, a new magnetic alloy made of nickel and iron, and used as a winding around the copper core of recent transatlantic telegraph cables. Neither of the magnets used in the floating-bar experiment is of permalloy, and, in fact, the two materials have exactly opposite characteristics. The cobalt-steel is used for the magnet bars because it will hold a very high magnetizing charge. The permalloy, on the other hand, gets its name from the fact that, after a specially invented heat treatment, it develops high initial permeability, that is, remarkable capability of being magnetized by very weak forces, while for strong magnetizing forces it is not as good as plain iron.

Weak magnetizing forces are commonly met in all forms of communication, wire, radio and submarine. The first use of the new permalloy, therefore, was as a winding for submarine-telegraph cable. Several such cables have been "loaded" by this method with permalloy tape, and, by virtue of the higher inductance they offer

Carbonyl Co., Inc. Schenectady N.Y.

The Michelson Experiments Were Checked Again This Winter with This Apparatus, Installed on Mt. Wilson and Mt. Baldy, Two California Peaks Twenty-One Miles Apart

to the weak telegraphic currents, thus offsetting the capacity from cable conductor to the sheath or sea water, they permit the transmission of a wider range of signal frequencies, and hence a higher speed of telegraph operation. Such cables have about five times the message capacity of the old-style cable. The permalloy also is being used to a wide extent for parts of new telephones and telephone apparatus, wherever its properties prove useful.

Because magnetism, as represented by the deflection of the compass needle, is manifest everywhere on the earth, the idea of harnessing the earth's magnetic currents is one that has been proposed for centuries. One of the oldest forms of perpetual-motion scheme proposed an incline up which a ball weight should be drawn by a magnet placed at the top. Just before the ball reached the magnet it was to fall through a trap, roll down a second incline, and return to the starting point, to repeat the performance. As far back as 1579, Bishop Wilkins described such a device in his book "Mathematical Magick," along with several others, all designed to utilize the earth's magnetic force.

Science discovered long ago that that force isn't strong enough to be utilized for anything much harder than turning a well-balanced compass needle, though, as recently as a year ago, two prominent flyers were reported to be interested in a so-called "magnetic motor" which was supposed to turn magnetic forces into power. Another suggestion offered to

the war department not long ago was that the nose of an aerial bomb should be magnetized so that the attraction of the mass of steel in an enemy warship would draw the bomb to the mark regardless of how it might be aimed when dropped.

As the most powerful electromagnets made have a lifting radius limited to inches, the idea of using magnetism, so far as it is now understood, is certainly impractical.

The Einstein theory, however, if it can be developed some day into a workable formula, may revolutionize all present-day accepted notions of what is possible. Radio, to begin with, was merely a scientific theory. The atomic theory itself was only an interesting speculation to begin with, but as a result of its classification of the ninety-two elements which it provides for, several of the unknown ones, such as illinium and niobium, have been discovered, and, in fact, only two of the ninety-two, both of them probably somewhat radioactive chemicals, remain to be found.

The atomic theory is closely linked with Einstein's theory of only one substance in all the universe, for it is based on the assumption that the only difference between the known elements lies in the number of electrons revolving around the proton which forms the center of each atom of the material. In other words, the atom is a little universe somewhat like our own, with a proton in the center in place of a sun, and electrons revolving around it in place of planets.

STRENGTH TESTS ON BRIDGE TO AVOID ACCIDENTS

"Third Degree" Methods in Testing a Concrete Bridge; Using Stress-Measuring Instruments, and View of the Tanks on Span for a Weight Test

Accurate methods of testing bridges, to discover those that are unsafe, were demonstrated recently by engineers of the bureau of public roads who used special instruments in determining the strength and capacity of the Yadkin river bridge in North Carolina. The structure is a quarter of a mile long, has seventeen spans, three of which are 146 feet in length, and had been abandoned because of the building of a dam in the river. Under the arch of one of the longest spans, a scaffolding was

erected for instruments, to record strains and stresses from two tanks filled with water and placed so that their weight could be varied and their location changed.

First, the engineers cut through the floor to destroy the continuity of the concrete slab for a test of its strength. Next, various instruments were placed so as to record the amount of strain and to give data as to just how much the concrete span varied under the weight of the tanks. A clinometer was used to measure the change in the position of the arch rib. This instrument is similar to a carpenter's level. Changes in the length of the rib were measured with an instrument electrically connected to a central station

where the readings were made. By means of storage batteries, the instruments gave automatic records. Electrical methods were also used to gauge the change in the position of the arch rib. The bridge did not collapse under the heaviest load, but cracks developed which showed that it was unsafe.

PARACHUTE HAS METAL RIBS TO AID IN LANDING ²²²⁰

Several interesting features are combined in a marine parachute which has been devised and tested by a Chicago man. It is attached to the side of the plane, is released by pulling a cord and is connected by a strong rigging to a sling harness which the aviator wears instead of the usual parachute bundle. At the instant of release, the parachute opens quickly somewhat like an umbrella. It has twelve ribs of a strong, light metal and is so adjusted that it will not capsize and will remain afloat and open even if the jumper should alight on water, thus serving as a raft. The rig can be quickly closed up again for another jump, weighs less than twenty-five pounds and is so arranged that it is released from a plane flying at any angle.

HUGE CATHEDRAL IN NEW YORK TO BE THIRD LARGEST

On the basis of ground surface covered, the cathedral of St. John the Divine, now under construction in New York city, will be the third largest place of worship in the world. It will occupy more than 109,000 square feet. In exterior length, it will be second among the world's great churches. One of its most remarkable features is to be the nave which is ninety-six feet wide. The prevailing style of architecture is what is known as thirteenth-century French and was developed by medieval builders who erected the Notre Dame cathedral, and those of Amiens and Rheims. Sculptors and carvers are closely following the designs of the sculptors of old in the details of the decorations.

MINERS HARNESS SURF TO GET GOLD FROM SEA FLOOR

In 1897, when gold was discovered in the sands off Nome, Alaska, there began a long series of interesting attempts at submarine placer mining, for quantities of gold were known to be farther out from the shore. Today, the beach is strewn with the wreckage of the various machines that were used, broken dredge hulls, steam and gasoline engines, and curious scoops that were meant to harvest the golden grains from the tides. The place would be a junkman's paradise, were it not for the facts that the freight rate to market is \$30 a ton and that a team of horses rents for \$40 a day. However, with pans and surf washers, considerable gold is still being taken from the sands. The surf washer is essentially a short sluice box, so arranged that the surf will wash the sands up into it and the particles of gold are collected by mercury. Sixty miles south of Nome, three miners are operating a development where they have found a pay streak below the line of the surf's wash. In the winter, they dig down through the ice and into the bedrock, thawing the way with steam. Before

spring, they dig out all the pay dirt they can and dump it above the line of wash, for later treatment with pans and a surf washer to collect the gold. They have operated this mine from under the ice for thirty years. The plant lies at the foot of the Council mountains, a range where many broken bodies of quartz have been found. When exposed to the frost, these quartz fields become free-milling ore, and for this reason it is possible for the waves to help extract the gold.

"MOON POWER" IS HARNESSSED IN BUILDING BRIDGE

Engineers indirectly utilized the force of attraction from the moon in installing a 303-foot span of the highway bridge over the deep-water channel of San Francisco bay. Taking advantage of the high tide the span, weighing 613 tons, was towed into place and slowly carried into the proper position as the tides receded. The bridge is more than seven miles long.

JOINT RAIL AND BUS SERVICE TO SIMPLIFY TRAVEL

Joint rail and bus service is planned by the Pennsylvania railroad on the same principle as its combination facilities by trains and airplanes. Passengers will be offered the option of making their journeys partly by rail and partly by bus, using sleeping cars at night and busses for all or part of the journey by day. The service is expected to be extended until, in certain areas, busses may take the place of branch line trains or others where traffic is light and until through tickets, covering joint rail and bus journeys, will be sold over certain routes. The innovation will promote the efficiency of bus lines as feeders to the rail system, officials predict.

EAGLE'S FEET ON COIN RIGHT? WRONG, SCIENTIST SAYS

When an eagle flies, does it tuck its feet under its breast or does it let them trail behind? The question has been asked before, but has come to the front again in considering the eagle design on our silver quarter dollars and twenty-dollar gold pieces. The bird is shown with its feet trailing. According to

Capt. C. W. R. Knight, British naturalist, who has taken motion pictures of eagles in flight, this is wrong. He declares that the bird allows its feet to trail only when it is taking off for a flight.

DOUBLE EARPIECE FOR PHONE ALLOWS TWO TO LISTEN

Two persons may listen at the telephone at the same time or one may use both ears with the aid of an earpiece attachment which

slips over the receiver. It leaves one hand free, can be adjusted or taken off in a few seconds and is said to be a benefit to the hearing. The unit can be carried in the pocket. Of course only one of the listeners can use transmitter, but this is usually no drawback.

Fighters of

By LELAND S. JAMIESON

TWO STUDENT pilots of the army air corps advanced flying school walked from the office of the "pursuit stage" toward two airplanes on the flying line. On the way, they compared their watches.

"I'll meet you over Mitchell lake at 5,000 feet," one of them suggested. "Better make it ten-thirty—my motor's got a blown valve and I can't climb very fast."

"How're you going to whip me in a combat with a blown valve?" the other scoffed.

"Don't worry. I did it yesterday, and she was blowing then."

"Yeah, you got the drop on me yesterday by starting the fight out of a dive. You come in straight today, at cruising speed, or I'll pull out on you and there won't be any fight."

"Five thousand—at ten-thirty. Let's go."

Both men swung into their parachute harness and climbed into the cockpits of their planes. They spent a few moments inspecting the curious-looking black objects which nestled against the cowlings in front of the planes' windshields—their camera guns—then waved the blocks away and taxied out into the flying field. Streaking away in front of fan-shaped clouds of dust, they took off and climbed leisurely into the cloud-flecked blue.

the Air

Student Gunners on the Machine-Gun Range at Brooks Field, Tex., Shooting at Moving-Airplane Targets

Ten minutes later, at 5,000 feet, they waved to each other, circled away and separated by a mile or more, then cut sharply and flew almost head-on. Gradually each man eased his throttle forward; each ship picked up speed until it was "spanking" its way through the air at 140 miles an hour. Each pilot gripped the

machine-gun control on his stick and squinted along the top of the fuselage at his opponent; the two planes passed each other, and instantly each man eased back on his stick and whipped his plane up and around. The "dog fight" was on.

One ship was superior to the other in climbing ability, and gradually its pilot forced it around until it was upon the other's "tail." Slowly "feeling" his controls to get the maximum performance from his plane, he lined his sights upon his opponent—and pulled the trigger. The camera gun, actuated by a spring mechanism, began to "shoot," taking pictures at the rate of 100 a min-

ute, photographing the area in front of the sights, where bullets, had they been fired, would have gone. The target plane slipped across the sights; it pulled up into the cross hairs; if machine guns rather than a camera had been used, it would have been shot down.

During the World War pilots were

taught to shoot guns in the air by the use of small, captive balloons as targets. But the disadvantages of that system were manifold. An uninhabited area of considerable size was needed, to avoid the risk of wounding people on the ground; nor was it uncommon for the uninitiated embryo pilot to collide with his target balloon, which, in the days before parachutes were used, was practically always fatal. And having no movement of its own, the balloon presented a target much different from a darting enemy airplane.

As early as 1917, efforts were made to develop a camera that could take the place of an actual machine gun in training, and the combined efforts of the Eastman corporation and the air service produced what is now known as a camera gun. Mounted on an airplane, it furnishes a complete and accurate record of each pilot's marksmanship. By means of an ingenious mirror in the latest types of camera guns, the exact second of the exposure or shot is superimposed upon the finished print, thus forestalling any argument between combating students as to which one fired the first "fatal" shot.

Later a method of giving student pilots machine-gun training on the ground was developed. In firing upon a moving object, a serious error in aim is encountered by the novice. At first, he aims his gun directly at the flying ship and fires, but by the time his bullet has been hurled from the muzzle of his gun to the target, the plane at which he is shooting has moved forward several feet, with the result that the bullet passes well to its rear.

A wooden frame, built very much like

Camera "Gun" Mounted on a Lewis Machine Gun, and Some of Its Pictures; the Plane, the Target Shows, Was "Led" to Allow for Deflection

Students, Seated in the Balcony, Observing a Battle Field Below; the Peculiar Figures in the Lower Right-Hand Corner Are Ground Panels, by Which the Instructor Signals to the Flyers in the Air; a Battery of Four Guns Is Stationed in the Left Center of the Picture, Just to the Left of One of the Diagonal Roads; Below, Bombs in Their Racks beneath a Big Bombing Plane

the skeleton of an airplane fuselage, and containing a full set of controls, was made, and on this a gun mount was placed. The gun, being fastened securely to the frame, was moved when the controls were moved, and thus the final development in machine-gun training on the ground was achieved. The student, to aim his gun

at a given target, pushes on his rudder and control stick until his sights point at the object, then he presses his trigger on the control column and the gun fires.

But even this development was not exactly what was wanted, because until that time no targets other than the customary "bull and ring" type had been devised, and these, of course, offered no movement by which the student gunner could get training in deflection shooting. A new target was invented: A toy airplane that was attached by two eyelets to a movable wire, and this wire was pulled over a series of pulleys in such a manner that the plane traveled across the target butt in front of the gunner. Firing at a point-blank range of fifty feet, a target speed of seven and a half feet a second was the equivalent

of actually firing, at a range of 200 yards, at an enemy plane traveling at sixty miles an hour.

A more recent development in the art of synthetic-warfare training is the miniature range. Here, under the supervision of a specially trained instructor, students are given all the practical problems which they will encounter in dropping bombs from great altitudes, and in co-operating with artillery units in the adjustment of artillery fire.

A model landscape, built to scale from aerial mosaics of the terrain it represents, is used in giving artillery-adjustment training. Each student is equipped with a pair of earphones and a buzzer, and a radio key which connects directly to the earphones of the instructor. Seated in a high gallery overlooking the landscape, each man watches for the flashes of light that represent the impact of artillery shells, and when these flashes come, corrections are

Brooks Students Firing Camera Guns at a Real Plane; One of the Cameras, Center, and, Bottom, Machine-Gun Mounts on a Plane

Student at Brooks Plotting the Course of a Bomber over the Camera Obscura; the Training of a Fighting Flyer Includes Many Things besides Piloting an Airplane

made immediately and a report of error is made to the instructor.

The instructor calls to the assembled students: "Bracket adjustment"—one type of artillery fire. "Lieutenant Black, make the corrections after the battery is fired."

Immediately, working at a switchboard, the instructor's assistant snaps four switches down, then presses a button, and in four different spots upon the toy landscape a flash of light appears.

Over 300 tiny electric-light bulbs are placed at points under the canvas of the model terrain, and over 300 different combinations of "bursts" are possible, bringing into play practically every conceivable error in actual artillery firing.

To Capt. S. R. Stribling, of the ordnance department, belongs the credit for solving the problem of training for heavy bombing planes. He built a traveling carpet, representing the earth, stationed his bombers in a loft directly above the carpet, and above each is a bomb sight. The bombardier sits at his sight, determines the rate of air speed by the velocity of the carpet's movement, sights upon his target, and at the proper moment pulls his bomb release.

Instead of a bomb falling to the target,

however, the pulling of the release starts a stop watch, and the instructor, following the movement of the second hand, knows how long it will take the imaginary bomb to drop to the ground. Thus, if the bombing is being done, imaginarily, from 5,000 feet, the bomb will strike the ground seventeen and one-half seconds after it is released, and at that moment the instructor flashes a light at the point where the bomb would have struck.

Another ingenious device for giving bombing practice is the camera obscura. In practicing camera-obscura work, the pilot approaches the target in the same manner as when actually bombing, but at the moment at which the bomb would ordinarily be dropped, the bombardier flashes out a signal by radio to the instructor in the hut where the camera is located. In reality, this camera is nothing more than a rough lens, through which the image of the plane is cast upon a plotting table. At the signal from the bombardier, the instructor plots the path of the plane's shadow across the board, being able to grade the team in the plane, first by the time at which the bomb was supposedly dropped, and second by the straightness of the ship's path above the camera.

Filming and Recording a Home Talking Movie by Synchronizing Camera and Phonograph

TALKING MOVIES MADE IN HOME WITH SIMPLE APPARATUS

The home motion-picture camera and a small recording phonograph can be synchronized for the preparation of "talkies," a group of eastern enthusiasts have discovered. A banjo number was one of the first produced and was a success due to the careful timing of the film to correspond to the rotation of the record.

RADIO TALK WITH BYRD PLANE SETS WIRELESS RECORD

Flying 3,000 feet above the antarctic ice, Malcolm P. Hanson, radio chief of Commander Byrd's expedition, broke all previous long-distance wireless records from a moving airplane, when he talked with the New York Times radio station, 10,000 miles away. Reginold Iversen, radio engineer at the Times station, had been warned that a test would be staged from the Byrd plane "Stars and Stripes," by a call from Carl O. Peterson, operator on the steamer "City of New York," Byrd's base ship. "Listen in and try to hear the plane," was the call from Peterson at a few minutes after three o'clock in the morning. "The plane is now leaving the ice," was the next word. Iversen shifted the dial around to the thirty-four-

meter mark and picked up "WFC," the "Stars and Stripes" call. "Go ahead," he flashed back. An instant after his dot and dash "O. K." from the Times station had sped across the equator and far to the frozen south, back came Hanson's dispatch ending with the cheerful words, "sincere regards to yourself and the naval research laboratory and entire navy department on occasion of longest aircraft communication ever established. We are in flight 3,000 feet over Little America, Bay of Whales, Antarctica. Fine sunny night. Hanson."

The transmission ended twelve minutes after the report had been received that the plane was to go up.

REVOLVER RACK ON AUTO DASH AIDS POLICE SQUADS

Attached to the automobile dash or other convenient place, a revolver holder has been found useful for police duty. It consists of a projecting bar held by a bracket. The revolver barrel is simply slipped over this bar so that the weapon is handy for immediate use. The holder

Sketch of Revolver Holder Installed on Dash Where Weapon Can Be Grasped Quickly

can be taken down in a few seconds, as the bracket slips out of a socket.

Testing an Insulator by Subjecting It to a Million-Volt Laboratory Flash

MILLION-VOLT ELECTRIC FLASH TESTS INSULATORS

To determine the effect of lightning on bushings and insulators, experiments have been conducted in an eastern laboratory with an artificially produced flash of 1,000,000 volts. Wet-weather conditions were simulated by spraying a stream of water upon the unit under test while the electrical charge was on.

HOLLOW WALL DEADENS SOUND MORE THAN SAWDUST

Soundproofing involves careful study and practice, and scientists are just beginning to discover the proper way to protect interiors against noise. Among other interesting facts they have learned is that, under ordinary conditions, various materials that are supposed to deaden sound actually transmit it, so great care has to be exercised in constructing walls or other areas to make them soundproof. For example, hollow walls, in many instances, are better insulators against sound than those with an inner space filled with sawdust or other

also per Paul Sabene porous material. The filling, oftentimes, instead of keeping the sound out, helps carry it through. Walls can be made soundproof without tearing them down, by covering them with soundproofing materials which may be used as a base for plaster or may need special strips for the lathing and plastering, depending upon the kind of material used. If the room is to be insulated against sounds from within, a special soundproof plaster, that deadens echoes, literally swallowing the sound before it can bounce back again to another wall, has been prepared. It is being used with success in broadcasting studios and other interiors.

SHIP FEELS EARTHQUAKE

Sailing over the center of an earthquake just when it occurred was the experience of a British freighter recently. She was off the coast of Chile, when three heavy bumps were felt as if she were scraping the bottom, though the charts showed the depth of water to be over 400 feet.

The Great Sahara

Count de Prorok and Amenokai Akamouk, King of a Vast Tuareg Territory in the Center of the Sahara

By JAMES N. MILLER

1906 H. St. H. W. Washington
ADVENTURES far more thrilling than those described in the current novels of burning sands and desert sheiks are described by Count Byron Kuhn de Prorok, explorer, just returned to America after two years of investigating archaeological treasures in the heart of the Sahara desert. Within a few weeks he will be back in Africa once again, continuing his life work of revealing to science the secrets now concealed beneath century-old coverings of sand mountains.

A thousand miles into the remote recesses of the world's most mysterious wasteland, filled by desert desperadoes, the count made his way on his recent trip;

thirty-one years old, tells a graphic story of how he happened to go on his search for the mysterious white goddess—a search that finally met with success.

"I had long been convinced," he explains, "that the legendary queen must be far more than a fable. I had heard about her from virtually every tribe of desert folk and I knew that the belief in her one-time flesh and blood existence was adhered to by Prof. Émile Gautier, of Paris, greatest of all scholars of Sahara lore, as well as numerous other authorities.

"Back in September of 1926, therefore, I started my search by sailing from Paris, arriving at Algiers some ten days later. With me were twelve men of various scientific abilities, including Prof. Maurice

here meeting a people of giants close to seven feet tall but ruled over by hosts of masterful women; there almost perishing from sudden onslaughts of fierce and relentless sandstorms; while always he pressed steadily forward in the hope of solving the Sahara's most perplexing puzzle—whether or not the rumor was true that a powerful white queen, now buried amid untold riches, once ruled over a territory about as large as the United States and known as the home of the Tuaregs, descendants of the ancient Libyans, a cultured people who roamed the desert some 3,000 years ago.

Already renowned for unearthing many of the treasures of ancient Carthage, the youthful explorer, now only

Treasure Hunt

Countess de Prorok and Members of the Expedition Examining a Collection of Beautifully Worked Flint Instruments Gathered by Them near the Egypto-Italian Frontier

Reygasse, celebrated French archæologist, M. Louis Chapuis, well-known explorer, Henry Barth, photographer from the University of Paris, Harold Denny, of Paris, recorder of the expedition, Mohammed Belaid, famous Tuareg interpreter, and Bradley Tyrill, Pasadena, Calif., game hunter.

"Our preparations were unique. I had been studying the Sahara for a good many years and felt that camels, with all their vaunted endurance, were hardly the transportation mode for me, since they required great care. Nor was the standard automobile of much avail against the terrific onslaught of the wind and the great mountains of sand. So I finally hit upon the idea of having especially built for me three twelve-wheeled motor cars equipped with balloon tires. They worked admirably by boldly plunging through the torrid

sands and boulders and blasting many a new trail.

"We had to make careful arrangements with the French government so as to gain some assurance of safety from the desert brigands. The French responded generously. As most people know, their remarkable system of military guard consists in the maintenance, at strategic watering places, of garrisons, whose purpose it is to lend aid to law-abiding travelers as well as to protect the commercial interests of France. The men in charge are known as the 'Meharis' or military police.

"Only a few days of traveling through the picturesque Atlas mountains, and we were in the great Sahara. At this point we had no idea of the supposed location of the 'White Queen's' tomb, so we decided that it would be best to live among the natives for about a month, thereby gain-

Opening the Tombs of a Mediterranean Civilization Whose Riches Rivalled Those of the Entire Nile Region Today

ing their confidence and listening attentively to rumors of the supposed queen's whereabouts.

"Now, too, we were in the land of the Tuaregs, which word in our language means 'the abandoned of God.' In virtually every respect they are markedly different from the other desert nomads, being fair-complexioned underneath their tan, instead of black, practicing strange ceremonies and giving women an exalted place in the domestic life. In addition, the Tuaregs have resented interference from outsiders, so we had to plan painstakingly our early contacts with them. First of all we had sent ahead bales upon bales of sugar and tea, of which they are fond. Apparently our gifts had beguiled completely these desert stalwarts, for the king, Amenokal Akamouk, a jolly fellow of some fifty years of age, greeted us with open arms.

"Far from being overdrawn, the strange stories about the Tuaregs seem to me to be underestimated. The men wear veils while the women do not and the ladies possess most of the education. Not only do they control the home and family, but inheritance is likewise on their side. Even

when a child is born it automatically takes its mother's, rather than its father's, name.

"Nevertheless all this woman rule prevails in a land where the men are close to seven feet tall. Beautifully proportioned and of clean-cut features, the pure-bloods are just about a hundred per cent white, though of course the strong sun has given them a coat of tan. It is laughable to think of the men as painting their lips and eyebrows, but that's not even half the story. They actually wear their hair in what looks like a fantastic kind of permanent wave. The men do not prepare their own locks, however. That is the job of the women, and they fulfill it well.

"While, to our way of thinking, many of the Tuaregs' habits are exceedingly queer, yet they have certain delightful ones that are well worth mentioning. Take their music. It is like nothing else I have heard anywhere—a sort of plaintive wail with an occasional long note like the 'zing' of the Hawaiian ukulele. The 'amarad'—the instrument most commonly used—looks like a cross between a violin and a mandolin, and it is played only by the women. Up and down, for hours at a time, they wield the crossbow.

"Another charming custom is the invariable one of conversing entirely in verse. Imagine trying to frame your commonest thoughts in such fashion! Certainly the feat requires the quickest kind of wit, but the Tuaregs are quite equal to the occasion and some of their folklore is abundant with genuine classics of poetry commemorating mighty deeds of valor.

"After a month among these fantastic folk, we managed to glean, by means of careful questioning, what seemed to be valuable information about the possible whereabouts of a tomb purported to be that of the mythical White Queen. Guided

Count Byron Kuhn de Prorok and Maurice Reygasse, Administrator of the District of Tebessa, Being Escorted to the Tombs of the Kuids and, Below, the Temple of the Oracle of Jupiter Ammon, Thirty Centuries Old; It Was Visited by Alexander the Great, Croesus of Lydia, Cato, Lysander and Hannibal, Who Braved the Desert to Consult the Oracle

The Famous Fountain of the Sun, Which Ancient Historians Said Was Warm at Night and Cool by Day

by Belaid, our Tuareg interpreter, about three days after leaving the camp of the Tuareg king, we arrived at the supposed region of the White Queen's tomb. There was no immediate sign of habitation, so far as the white Tuaregs were concerned. Though only a few miles away, we found a number of mud houses inhabited by native blacks.

"A proper excavation procedure requires the services of a good many people and we were only five in the first truck. So there was but one thing to do and that was to hire some of the blacks. Having persuaded twenty of them to join our employ, we looked around us more carefully and noted what seemed to be a great circular monument, about 100 feet around, forty feet high and made up of great volcanic rocks, beautifully sculptured and wrought with ancient Libyan inscriptions.

"And now a few explanatory words about the accepted way to excavate a desert tomb. Of course, big spades are used, but every single shovelful of sand must be sifted painstakingly so as to make sure that no possible small treasure will be missed. Thus every member of our party had a hand sieve, and shoulder to shoulder we dug our way down, looking for all the world like a group of gold-seeking prospectors. As indeed we were, in a sense.

"Down at the base of the monument we

could early see the outlines of the tombs of twelve noblemen. Each tomb was about fifteen feet square and eight feet high, we discovered. Being pressed for time, we forced our way right through the heart of the monument, penetrating sand and stone alike. And most of the stones, mind you, were about two feet by three in size and were heavy enough to require two men to transport them from their original position. At a rough estimate, I would say that we removed in such fashion thousands of great stones

within our two weeks of excavating.

"For five days we kept right along, digging and sieving with remarkable zeal, considering the circumstances. Then, I made my first great discovery, a tiny red object about the size of a fingernail. It was a coral bead, almost identical with certain beads I had found some years before while probing the ruins of ancient Carthage.

"Shortly thereafter I found quite a few emeralds and garnets (cousins to the ruby) besides a great abundance of semi-precious stones. By this time we had worked our way down through stone and sand clear to the monument's floor. A few more deft movements of our spades, and our delighted and astonished eyes were offered the once-in-a-lifetime treat of a veritable Aladdin's carpet, covering the entire floor, red in color, made of leather and possessed of a beautifully wrought fringe about six inches long. It was preserved almost perfectly because the extreme dryness of the Sahara serves to keep most materials more or less intact for centuries.

"Among the objects found next, in the order named, were: a rock-crystal vase and a funny-looking nine-inch statuette of a broad-shouldered woman. This last was of the utmost importance because it heralded the greatest find of all. A few moments more of brushing the sand away,

and right beside this statuette was found a perfectly preserved skull of a woman close to seventy years old. The condition of the sharp-edged teeth told us that. It was the skull of the White Queen herself.

"With utmost care we continued to remove, with our brushes and bellows, the coating of sand in the surrounding region and soon found remnants of the entire corpse, including hundreds of delicately fashioned beads and all manner of precious jewels. The royal lady had been lying on a magnificent canopy of sculptured wood, portions of which were in well-nigh perfect condition. On her head had been a tiara, or jewel-containing garment, besides three feathers. This last discovery indicated strongly that the White Queen had been a veritable Amazon who had fought during warfare periods.

"After leaving In-

party was organized. But fortunately the lost members in their two trucks staggered into Oargla two days later.

"About the date of our find there was much controversy, some members of our party thinking it harked back to days before Christ, and others, that it dated far later. The argument was not settled until we reached Paris about a month later, and that was a curious situation. It seems that we had found a small wooden bowl, or vase, with silver designs on it. But since we had so many little curios to examine, we hadn't taken the trouble, while in Africa, to scrutinize this particular one very carefully. But one day in Paris I was entertaining a group of scientists and happened to be idly cleaning the vase, when underneath the sand and dirt I suddenly beheld three metal objects. They were Roman coins and their presence in the curio left no doubt but that our party had found the White Queen."

Excavating Tombs of the Amorians, a Collection of Silver Coins of Alexander the Great, Found in the Desert, and de Prorok Meeting the Chief Guide of the Expedition

salah we were caught in a terrific sand-storm with certain dunes towering 1,400 feet high, and soon the three trucks became separated. My truck finally bore several of us safely to Oargla, a French fortress a few hundred miles away. We told the officials where we had last seen our companions and immediately a search

GEESE WEED BERRY PATCH

Geese have been used as a substitute for laborers in keeping a North Carolina strawberry patch free from grass, and the practice is said to be spreading throughout the south. The birds eat the grass but do not touch the berries or plants.

AUTOMATIC OILER REACHES ALL PARTS OF THE CAR

Sketches of the Automatic Chassis-Lubricating System; Top Row from Left to Right, Bearing Connection, Cross Section of Resistance Unit, the Pump, Filling Reservoir and, Below, Scheme of Entire System

Continuous and automatic lubrication for the automobile chassis is afforded in a system that utilizes the effect of road shocks while the car is in motion to keep all bearings thoroughly oiled. All the motorist needs do is to fill the reservoir. There is nothing to push or pull, for the car literally lubricates itself. This is accomplished by the action of a pump inside the oil reservoir, a glass container installed under the hood, on the dash or in any other suitable place. The pump is so adjusted that it is operated by the jarring of the car. This motion causes oil to be forced into the line. To control the flow, resistance units are installed at each bearing. They govern the amount of oil that reaches the bearings and are also fitted with a fine screen to keep out foreign substances. A small check valve is incor-

porated in each resistance unit to prevent the system from draining, a trouble likely to occur, since some of the bearings are higher than others. By turning a screw in the pump, the amount of oil to be fed into the line can be regulated. This is the only adjustment necessary.

PLANE SOLVES SEA MYSTERY 2409 IN FINDING SHIP

Lost for six days after a storm, and unable to communicate with ship or land, the Russian motor vessel "Communa," with twenty-six persons aboard, was found by airplane recently. The boat's engines had been disabled and it was helplessly drifting when it was seen by observers in the low-flying plane. A tug was sent to the rescue.

KILL GERMS THAT EAT STONE TO PRESERVE BUILDINGS 24

Scientists are waging a chemical warfare against harmful germs that devour stone and other building materials. Some sixty different species of organisms that eat stone and other substances have been discovered, and chemicals that will kill them without damaging the material are being sought. The germs weaken structures by opening pores in the surface, thus exposing it more to the weather and causing it to crumble. It has been found that some of the bacteria will cause erosion in the hardest marble in three weeks. Investigators have found that beetles and some other insects that have been blamed for damage to buildings are not at fault.

MOTOR SKIS AT SWISS RESORT GIVE WINTER THRILLS 21 73

St. Moritz, Switzerland, long has been famous for its winter sports, and this season a new one was provided in motor skis for fast travel over snow and ice. The rider, wearing skis, sits on a third one to which a motor has been attached. The controls are within convenient reach, and the operator easily balances himself with the aid of the outer skis.

Tri-Ski Speed Outfit for Fun in Winter Snows, with the Motor Unit Mounted on the Center Ski

Greasing Bearing through Special Fitting, and a Close View of Installation

FITTING CLOSES OPEN OIL HOLE AND SAVES WASTE

High-pressure fittings have been introduced for open oil holes on machinery to keep out the dirt, save waste and afford the benefits of pressure lubrication to parts that ordinarily are oiled in a more or less haphazard manner. The units involve no threading operation and can be installed in a few minutes. First, a bushing is driven into the hole and into the top of this is inserted a nipple with a dirt-proof ball-check valve. An ordinary hammer and three special tools form the necessary equipment for installing the fittings. So equipped, the parts can be lubricated with a pressure gun.

SEA GRASS STOPS SOUND AND KEEPS BUILDINGS WARM 2246

Builders have discovered that a common variety of sea grass is serviceable as an insulator against sound, heat and cold. Like other cellular substances, when dried, it proves an effective shield against noise and is said not to harbor insects while it is practically fireproof. It is being used extensively in some sections for upholstery and mattresses.

The World's

tions that are known as "nematodes"; while, in virtually every sizable aviation field of the army air corps, there are specialists called "dopesters," whose main job is to cover sections of recently repaired planes with a chemical compound so poisonous that some of the applicers actually have to drink as many as five quarts of milk a day in order to counteract the dope that seeps into their system and makes them "groggy."

IN UNCLE SAM'S big science mill at Washington, where practically everything under the sun is made, perfected, studied or examined so that we may be happier, healthier and live more comfortably, there are hundreds of experts who spend scores of years and sometimes entire lifetimes on research projects of the queerest kind imaginable.

One, for instance, with the tongue-twisting title of "helminthologist," spends hours examining under the microscope the almost countless varieties of strange parasites that prey particularly on humans; another often has to stick his head deep into funny-looking and especially devised contraptions so as to watch the frolicsome maneuvers of those fantastic, whip-like organisms of almost uncanny shapes, sizes and descrip-

Dr. W. W. Coblentz, of the Bureau of Standards, Testing Glass Screens to Protect Movie Stars from Kleig Lights, and Miss Eloise Cram, Bureau of Animal Husbandry, Examining Chicken Pests

Queerest Jobs

Not all these jobs, of course, are dangerous, and may be it's not quite fair to call them queer, since every one seems to be absolutely essential in advancing the almost breathtaking hop, skip and jumps of modern-day science. Yet, to the average person, they are bound to take on a singularly strange, or at any rate novel, character.

Take the case of William N. Dovenor. He is an artist and, in his official capacity as chief scientific illustrator to the bureau of entomology, his main task is to devise a rogues' gallery of insects harmful to man and orchard. Ask him what he has been doing for the past sixteen years and he'll reply "everything under the sun," while explaining that first of all his purpose is to sketch the complete life history of the knaves of "bug-ology" so that the farmer and gardener may learn how best to control them and so protect their crops.

To hold a job like that requires the utmost patience and painstaking study. May be for as long as ten days, or even two weeks, Mr. Dovenor, in the recesses of his studio, will be called upon to spend every available working hour studying the wriggings of a single insect larva that isn't much more than visible to the naked eye. But it is just such seemingly inconsequential creatures that devastate and destroy

A Government Chemist Practicing Ultra-Filtration in a Delicate Test. One of Many Made Daily

hundreds of thousands of acres of corn, tobacco or cotton.

On one single canvas, containing but twenty-six views of twelve different larvæ, his endeavors occupied several months.

Movie stars may not realize the fact, but it is nevertheless true, that much of their indebtedness for relief from the strained-eye ailment, known in its advanced stages as "Kleig eyes," is due to the efforts of Dr. W. W. Coblentz, of the bureau of standards. When the subject was first brought to his attention, he conducted many tests with various glasses to cap the high-powered Kleig lights. But not so long ago he made the astonishing discovery that probably the very best thing for the purpose was ordinary window glass. The reason is that it does not transmit the piercing ultraviolet rays, a situation that, strangely enough, has caused window glass to be condemned rather universally by the health experts.

The helminthologist is Dr. Maurice Hall, best known, probably, for having done more in devising ways to combat the persistent human tapeworm than any man in America. There have been times when Doctor Hall has swallowed the undigestible creatures, and now and again the results have placed him pretty close to the martyr list of research workers.

Similar to Doctor Hall's is the everyday work of Miss Eloise B. Cram, zoologist, whose study of internal parasites is confined to chickens and pigs rather than humans. Her efforts alone undoubtedly save American farmers hundreds of thousands of dollars each year. Her chief occupation just now is to find out how the serious poultry diseases are spread. She has long held the idea that, may be, the cockroach, the grasshopper, or else the cricket has had a hand in the situation, and lately she has proved that insects indeed are to some extent guilty of transmitting the diseases.

In the same general line of work as Doctor Hall and Miss Cram is Dr. N. A. Cobb, who bears the title of "nematologist." Thus graphically does he describe the vital importance of his studies: "If all the substance of the earth and of the things that flourish on it, with the exception of the threadlike organisms known as nemas or nematodes, could by a stroke of magic be made invisible, then it would

still be possible to distinguish the soil-covered parts of the earth, the streams, lakes and oceans, the insects, animals, birds, fishes, plants and humans. So widespread and abundant are the nemas, that in this imagined world of transparencies most living things, such as the blanket of soil on mountains, hills, and plains, and the bodies of water would be indicated by clouds of these living threads which vary in length from a small fraction of an inch to several feet, and in diameter from that of the finest of hairs to the thickness of a lead pencil."

An observer, looking through a high-power microscope, views in a lighted field a world as complex and as full of mystery as that we see daily with the unaided eye. There are poorly lighted recesses in this world that hold their secrets tenaciously and seem to require for their exploration something comparable to the spotlight in a darkened room.

Just such a spotlight has been recently discovered by Doctor Cobb. Knowing, of course, that when the image of the sun is reflected into the field of vision of the microscope, its brilliance is far too great for the unprotected eye, he investigated further. To his surprise he found that on hazy days he could actually form the image of the sun on the tissues inside the object being examined. This bright spot lights up the surrounding tissue, en-

Mixing Deadly Potions, to Be Tried Out on Cockroaches and Other Insect Pests, Is the Regular Job of J. W. Sale and J. B. Wilson, of the Food, Drug and Insecticide Bureau

An Artist Is Retained by the Department of Agriculture to Paint Garden Bugs; Below, One of the Special Microscopes Used to Study Minute Organisms That Prey on Animals

abling the observer to see plainly what did not appear under ordinary illumination.

So Doctor Cobb, since then, has been experimenting with various means of duplicating the effect of the sun as seen through a

hazy atmosphere. He tried out glass-walled boxes containing smoke, then fumes of ammonium chloride, next water containing milk, and so on, down through a lengthy list. He achieved an especially good result by the use of a huge sheet of glass very finely etched with acid. Deeply colored glass, especially green or blue, may be used to advantage, he found, so that, with such a glass sheet between the sun and the microscope condenser, the sun's image can be used to search out the otherwise obscure spots.

Those dopesters of the army air corps, mentioned earlier, use such poisons as cellulose acetate and cellulose nitrate for the reason that they tend to fill the pores in the outer fabric of the plane and cause it to shrink, thereby giving it an airtight and smooth surface. The plane as a whole is not covered in this way because that has been attended to by the commercial makers of the ship. It is only the wings that have been temporarily broken and have just been patched up, that need the dope.

Speaking of poisons, there is an official of the bureau of chemistry and soils whose major task is to watch for and investigate carefully the reports of all new chemical compounds that give promise of going toward revolutionizing the nation's commercial trade poisons. Dr. R. C. Roark is the man, and he is known as the poison investigator. Right now, he is devoting considerable time to a new compound known as rotenone, which is made from the derris root, found rather abundantly in the Philippines, Java, Bor-

neo, Sumatra and the Malay peninsula. It has been claimed, though not authoritatively, that the natives of those places have used the root for the purpose of killing fish, by simply putting a tiny quantity of the poisonous substance in the water, whereupon, within a few hours, the swimmers die and float to the surface to be caught readily.

The claim might be true enough at that, experts say, since tests show that one part in a million can kill minnows with an exposure of twenty-seven hours. But if derris root kills minnows, why doesn't it deal death also to humans? Because it has the peculiar habit of quickly becoming decomposed and inert. Which is why it shows splendid prospects of being valuable as a spray, possibly taking the place of the deadly lead arsenate. Rotenone shows further promise in that it is soluble in certain oils without losing its strength.

A somewhat different study of poisons is conducted under J. W. Sale and J. B. Wilson, of the food, drug and insecticide administration. To them falls the lot of mixing up concoctions that spell speedy destruction to the cockroach and its insect cousins.

Almost equally unknown to the public is W. B. Symonds of the bureau of chemistry. All day long, he wrestles with all manner of glass which he molds into fantastic shapes

H. P. Sheldon, of the U. S. Biological Survey, spends his time figuring out where the wild birds of the Nation live at various seasons of the year

for famous men who must have, at a moment's notice, the practical results of intricate-looking blueprint ideas.

Who ever heard of "ultra-filtration"? The word sounds highbrow and is, for it must have the guidance of an expert who understands the highly intricate work of filtering carbohydrates (starches and sugars) to just about their finest possible point. Such a man is L. E. Dawson, government chemist, whose efforts in this connection are invaluable to the sugar and candy industries. Like W. B. Symonds, and most of the other government scientists who perform miracles for you and me while sitting tight and saying nothing, he is literally a wonder worker.

Experts in the various government departments are constantly being called on to perform the seemingly impossible. One classic example is the order from Doctor Langley, when he was secretary of the Smithsonian, instructing an aide to drill a hole lengthwise through a needle much finer than those used for hypodermic injec-

tions. The task was completed successfully.

Recently the bureau of standards, helping prepare a government exhibit to be shown at the Spanish exposition at Seville, Spain, this summer, solved the problem of getting an accurate count of the number of visitors who inspect the American exhibit by building a light-beam counter. A

small light is to be placed at one side of the gate, focused on a photoelectric cell hidden in the other side. Every person passing through the gate will interrupt the light, momentarily stopping the current generated in the light-sensitive cell, and this in turn will operate a relay controlling the automatic counter.

The bureau of standards carries out an immense amount of scientific research work. One of its sections does nothing but study fires. A single report, recently issued on the fire-resisting qualities of hollow tile when used in load-bearing walls, fills a volume of over 330 pages.

Chemists Found Milk an Antidote for Poisoning from Aircraft Wing "Dope"; Studying Nematodes Is Doctor Cobb's Job; Bottom, W. B. Symonds Blows All Special Glass Apparatus

ELECTRIC PLANT IS PORTABLE FOR LIGHT AND POWER

For service in places where power lines are not available, a portable electric plant, operated by a gasoline or oil-burning

motor, has been devised by German engineers. It furnishes illumination or drives tools of different kinds and is especially adapted for service along railroads. Cables are provided for operating several machines and lights at the same time.

WOMEN GAINING AS INVENTORS PATENT RECORDS SHOW

In Kansas lives a woman whose chief occupation is raising chickens but she has found time to invent a doll that can walk, dance, sit down, cross its legs and do other things that humans can do. She obtained patents on the doll just recently, thus in-

creasing the growing list of women who are making names for themselves as inventors. Between 1790 and 1910, more than 11,000 patents were granted to women in this country. In England, women were granted 500 patents in one year, and a firm of patent lawyers there reports that more inventions by women are now being handled than ever before. Their

ideas cover not only the household field but extend to aviation, motoring and other activities. Among those winning prize awards from the General Electric company recently, was a woman employe who had developed a means for faster work on the armatures of small washing-machine motors.

TRACING CLOTH FOR CURTAINS ADMITS HEALTHFUL RAYS

Tracing cloth used by draftsmen in blue-printing drawings may become popular as a curtain material as a result of an accidental discovery that the fabric admits the healthful ultraviolet rays of the sun, usually excluded by paper and other kinds of cloth. It has been suggested that the material be placed in single thickness between wide-meshed wire screens to replace curtains and blinds in dwellings.

ELECTRIC HEATER WARMS BED AND SERVES AS DRIER

To warm beds, an electric heater, operating on somewhat the same principle as a hair drier, has been introduced in Germany. It is run from a lighting socket and when used in a bed, is placed upon the pillow with the nozzle down and the reverse side exposed so that air can be drawn through openings. The air is heated by the electric element and is fanned down inside the covers, circulation being insured with the aid of a coil spring which is laid lengthwise in the bed.

Rocks that Fall

The Bacubirito Meteorite, Second Largest Known Rock from the Sky, Lying at the Point Where It Fell in the State of Sinaloa, on the West Coast of Mexico

C's Picogram By CALVIN FRAZER *Washington 20*

ONE REASON why the moon is not fit for human habitation, besides the two well-known facts that it has no atmosphere and is subject to unendurable extremes of temperature, is that it undergoes the incessant bombardment of innumerable meteors. The majority of these bodies are no larger than grains of sand but have great penetrating power, as they fly at speeds ranging up to forty miles or more a second. Many, moreover, are as big as baseballs, and some are great boulders weighing hundreds of pounds or even several tons. A human visitor to the moon would almost certainly be hit sooner or later by one of these deadly missiles.

An interesting consequence of this fusillade of meteors upon the moon has lately been pointed out by Professor Olivier, a leading American student of meteoric phenomena. Astronomers have long conjectured that the so-called lunar craters, instead of being extinct volcanoes, may be the scars left by the impact of giant meteors. Whether or not this is true, says Professor Olivier, it is quite certain that the continual fall of meteors of mod-

erate size must, in the course of ages, have produced a sort of sand-blast effect upon the lunar surface, quite comparable to the erosion by wind and water that has sculptured the surface of the earth.

Only the presence of a surrounding envelope of air saves our own planet from a similar bombardment. It is estimated that fully 20,000,000 meteors enter the earth's atmosphere every twenty-four hours. The air protects us from these missiles in two ways. First, even in the thin upper layers of the atmosphere, the meteors are intensely heated by friction, and most of them are completely burned up or reduced to an impalpable powder long before they can reach the earth. Second, the resistance of the air checks the speed of those that reach the ground, so that they do not, as a rule, hit the earth much harder than would bodies of the same weight falling from the height of a few miles. The bigger ones fall with much violence, but small specimens have been known to fall on ice only a few inches thick without breaking it.

Meteors that fall to the earth are called meteorites. These vary greatly in size.

from the Sky

A Bursting Meteorite That Terrified the Natives at Chandpur, Northwest Provinces, India, on April 6, 1885; the Photograph Is Made from a Contemporary Drawing

The smallest thus far found were no larger than grape seeds, while the largest of all is the Cape York meteorite, weighing thirty-six and one-half tons, which Lieutenant Peary brought down from Greenland in 1897, and which is now in the American Museum of Natural History. About half of all the meteorites now preserved in museums were actually

seen to fall. The rest are known to be meteorites because they possess certain features characteristic of such bodies. The museum specimens represent nearly 900 distinct falls, and the total number of meteorites discovered up to date mounts up into the thousands.

Probably hundreds fall for every one that is recovered, but, even so, the fall of

a meteorite is an exceedingly rare event in any one locality. The late Prof. C. A. Young made a rough guess to the effect that the total amount of meteoric matter falling to the earth averages 36,500 tons a year. At first sight, this total seems large enough to make the falling of meteorites a rather serious danger to humanity. It is, however, so small in proportion to the area of the globe that, if the material falling at this rate were spread evenly over the earth's surface, it would make a layer only about an inch thick in the course of a billion years. Moreover, the vast majority of meteorites are too small to be capable of causing much damage.

Nobody need lose any sleep over the danger of being hit by a meteorite. Neither would anybody be justified in insuring his property against a similar danger. If an insurance company could

persuade a large number of gullible people to take out insurance of this sort, the company might operate for centuries without paying out a cent to its policy holders. Nevertheless, in the long run and on the earth as a whole, meteorites do cause a certain amount of damage, and there is a bare possibility that some day a fall of these bodies may be responsible for a more colossal disaster than any volcanic eruption, earthquake or flood that has ever befallen the human race.

This possibility was vividly brought to mind a short time ago by the belated news

of an event that happened in the wilds of Siberia in the summer of 1908. On June 30, about seven o'clock in the morning, a magnificent falling star, of dazzling brilliancy, was observed in the northern sky by thousands of people in the southern part of the province of Yenisei. The place of fall long remained a mystery, but in the summer of 1927, an expedition under Prof. L. A. Kulik located it in the midst of an almost inaccessible forest lying north of the "Stony"

Peary's Cape York Meteor; Halley's Comet, Parent of a Swarm of Them, and Meteor Crater as Seen from the Air; the Black Specks in the Foreground Are Trees

On the Rim of Meteor Crater, the Vast Hole in Arizona Which Has Puzzled Science; the Rim Is Lined with These Huge Boulders, Thrown Up by the Violent Impact

Tunguska river, in about latitude 61 degrees north and longitude 102 degrees east.

This region is very sparsely inhabited by half-civilized Tunguses, and this fact, together with a complete lack of roads and telegraph lines, explains why details of the meteor fall were so slow in reaching the rest of the world. Kulik has recently returned to civilization with a wonderful story of what he found. Where the meteorite struck, there is now an area several miles in diameter where the earth is torn and furrowed as though by a gigantic harrow and pitted by large funnel-shaped cavities, like shell holes. Around this central area, in a circle scores of miles in diameter, millions of dead trees lie like a vast forest of fallen ninepins. They are all stripped of their bark and branches, and each tree lies with its top pointing outward from the center of the devastated area. All the vegetation for miles around shows the effects of a uniform scorching, quite different in appearance from that caused by a forest fire.

Evidently a meteorite of extraordinary size burst in mid-air and rained down its fragments upon the earth, or else the falling material consisted of a swarm of meteorites traveling together through space.

The sudden compression of the air under these falling masses must have generated great heat and sent out in all directions a hurricanelike blast that felled and shattered the trees. The outrush of this hot air was actually observed by several natives in the surrounding country. One man, forty miles from the place of the fall, was hurled several feet by the air wave, which felt so hot that he thought his clothes would catch fire. His house was wrecked by the same wave.

Another man had stores and a herd of 1,500 reindeer in the forest at the time of the fall. Only a few scorched carcasses of these animals could be found after the event; the rest were completely annihilated. The storehouse was burned down, and a number of tools that it contained were melted. At Lalka, 400 miles from the center of disturbance, railroad employes felt the air wave and heard a roaring sound. Even at the observatory of Irkutsk, 800 miles away, the air wave was registered by a barograph, and the shock of the falling mass was recorded by a seismograph. No specimens of the meteoric material have yet been recovered from this fall. The fragments are probably buried deep in the earth, and it would be a difficult task to transport to the spot

suitable tools for digging them up, but this will doubtless be done eventually. A survey of the region by aeroplane will probably be carried out next summer.

As one part of the globe is as likely to be bombarded as another, it was merely a lucky chance in this case that directed the celestial missiles toward a wilderness rather than toward some densely populated region. If London or New York, for example, had been the target, the results would certainly have been appalling. Millions of lives would have been lost, and billions of dollars' worth of property would have been wiped out. It is comforting to reflect, however, that such a meteor fall as occurred in Siberia is almost unprecedented in the world's history.

Almost, but not quite. About thirty-five miles east of Flagstaff, Ariz., near the long ravine known as Canyon Diablo, there is a remarkable craterlike hole in the ground, 4,000 feet in diameter and 600 feet deep. No evidence of volcanic activity exists in the neighborhood, and though at one time there was much controversy in scientific circles about the origin of the hole, it is now generally admitted to have been formed by the fall of a huge meteorite or cluster of meteorites. A great number of iron meteorites have actually been found within a few miles of this spot. The principal mass of material is supposed to be buried hundreds of feet underground, and several unsuccessful attempts have been made to reach it, on account of the probable value of the meteoric iron, to say nothing of the chance that it may con-

tain diamonds, which have occasionally been found in meteorites.

The walls of this curious formation rise well above the surrounding desert, so that, at a distance, it looks an isolated hill of the flat-topped variety common in the southwest, and it was formerly called Coon Butte, but is now known as Meteor Crater. Trees growing on its side are fully seven hundred years old. On the other hand, the crater shows but slight indications of erosion, so that it cannot be very ancient. Navajo Indians living in the neighborhood have a tradition that fire once fell from heaven and destroyed members of their tribe. Probably the meteor fall that produced the crater happened well within the span of human history, and at a time when civilized communities and flourishing cities already existed in some parts of the world.

A few other craterlike formations on the earth, including one recently discovered in Esthonia, may possibly have been due to meteoric bombardment, but there is no convincing evidence that they originated in this way. Turning, now, to some of the more definitely recorded effects of falling meteorites, we find that in perhaps a dozen cases—most of them dating back many centuries—people were said to have been killed by meteorites. The evidence in all these cases is too uncertain to be conclusive, but, of course, such an event is entirely possible and has probably happened more than once. There have been some narrow escapes even in modern times. Thus at Braunau, Bohemia, in

A View across Meteor Crater from the Southeast Wall; Recent Tunneling Has Convinced the Owners the Huge Mass of the Main Meteor Has Been Located Far Underground

1847, an iron meteorite weighing nearly forty pounds fell in a room where some children were sleeping and covered them with debris, but did them no serious harm. At Charsonville, France, a meteorite fell on a road between two teamsters, throwing up the ground to a height of six feet. Roofs have been penetrated in several cases. A dog was killed by a meteorite at Nakhla, Egypt, in 1911.

Stories of buildings being set on fire by these bodies are usually taken with a grain of salt by the authorities. The scorching effect of the great Siberian fall was probably due, wholly or mainly, to the compression of the air and was altogether exceptional. Ordinary meteorites are heated to an enormous temperature during their passage through the air, but the heating is so brief that it is a mere skin effect and the heat is quickly lost when the object comes to rest. Meteorites found immediately after their fall are generally cold or lukewarm, though some have been described as "too hot to handle." No baking of the ground or charring of vegetation has ever been observed at the place of fall, except in the one case mentioned.

NINE-HOLE INDOOR GOLF SET IMPROVES PUTTING

Competitive features help make an indoor golf game more interesting and give the players valuable practice in putting and other strokes. The set is a miniature nine-hole golf course, the object of the game being to sink the balls in the holes from the tee and thereby score the points indicated for each hole on a small flag that automatically turns to designate the score when a ball has been sunk. Each player gets nine balls to the game and may play the holes in any order desired. Balls returning down the slope may be played over, those remaining on the field should not be removed until after the game and those that bounce off the board cannot be played over.

Part of the Apparatus Used to Test the Speed of Winds in Tunnel Experiments with Airplanes

HOT WIRE MEASURES WINDS IN AIRPLANE TESTS

One of the interesting details of apparatus used by the bureau of standards to gauge the velocity of winds in the test tunnels, where experiments on model airplanes are conducted, is a hot wire. It is about one-fifth the diameter of a human hair and is electrically heated. Used in connection with an amplifying set, it gives an accurate measure of the speed of the winds as they pass in waves and ripples around the planes under test.

ELECTRIC EYES REPLACE MEN AT POWER PLANTS

Power stations that run themselves and are watched by electric eyes which record their impulses miles away, are releasing men, who previously performed important but minor duties, to more active and responsible positions in the electrical world. The innovation suggests the time when television may be harnessed to aid the electrical dispatcher, but at present the method is too costly and is not practical. Essentially the same results are being accomplished by the remote-control system. Signals are sent to a central point and duplicate, on dials and in records, the readings on the instruments in the manless power plants.

Gate as It Appears When Raised; Auto Striking the Cable and Then Stopped by the Action of the Snubbing Mechanism, Which Is Visible in the Upper Part of the Two Photographs at the Right

SAFETY GATE STOPS AUTOS AT RAIL CROSSINGS

To prevent accidents at railroad crossings, a safety gate that halts automobiles before they reach the track, has been introduced. It consists of a road arm, raised and lowered like the ordinary crossing gate, but, in addition, it has a cable loop which engages a snubbing device. Should the car be driven against this loop, the cable, anchored to the snubbing post which progresses along a guide way, its movements being opposed by friction or by hydraulic means, gradually brings the automobile to a stop without injury to the driver or damage to the car. Under a test, a ten-ton truck, driven at a speed of thirty-five miles an hour, was stopped in this way without mishap.

HEATING RIVER WITH STEAM PREVENTS FREEZING

In 1776, the East river froze sufficiently to allow an army to cross the ice in safety. But the stream no longer does that near New York, for every hour some 400,000

tons of heated water and steam are sent back into the river from the big power plants along its banks. The water is used in condensing steam at the plants. Engineers estimate that the return raises the temperature of the entire stream at that point at least ten degrees in spite of the tidal currents that flow in from Long Island sound and New York harbor.

CARD HOLDER FITS ON FINGERS TO SIMPLIFY PLAYING

Persons who have difficulty in holding their cards at bridge or other games are served in a celluloid holder that is fastened to the fingers with a silk band. It permits arranging the cards easily.

Flies have their organs of taste located in the feet.

THIEF SNARED BY BLUE POWDER SPRINKLED ON PURSES

A kind of powder that turns an indelible blue when it comes in contact with moisture, was successfully used by Scotland Yard detectives the other day in catching a thief who had been taking pocketbooks from a girls' school in London. The powder was carefully sprinkled on purses placed as decoys for the suspect, a porter at the school. They disappeared, and the employe was accused of the theft. He indignantly denied the charge, but his hands were stained a bright blue, a fact that caused him to admit his guilt. The perspiration of his hands had caused the powder, falling from the purses, to change color.

AIR GUN TO CLEAN OUT DRAINS SAVES PLUMBING BILLS

When drain pipes become clogged, an effective way to clear away the obstruction is afforded in a compressed-air gun which releases an instant blast at thirty to eighty pounds' pressure. It is pumped up by a hand plunger, a gauge at the top showing the exact pressure, and the air is released simply by lifting a trigger valve. Attachments are provided for using the gun to the best advantage in different places, such as in sinks, washbowls and other units. A reversible rubber cone makes a leak-proof connection between the gun and the drain to be cleaned. Lengths of hose can be used for insertion into crooked pipes. The device has been found especially adapted to cleaning filling-station and soda-fountain pipes.

Gun in Position for Being Pumped Up, and Drawing to Illustrate How It Is Used on Sink

Outboard-Motor Pump in Operation and as It Is Carried to Save Hauling

PUMP RUN BY OUTBOARD MOTOR SERVES CONTRACTORS

For draining excavations, manholes and similar work, a portable pump that can be carried on the shoulder, is operated by an outboard motor. It will pump nearly 200 gallons of water per minute, saves time and work in moving and is quickly set up. A special feature is the automatic shut-off. A safety device stops the pump when water ceases passing through it.

BOY DISCOVERS NEW EXPLOSIVE AND WINS SCHOLARSHIP

His interest in chemistry has proved valuable to Edwin Mulvaney, a Chattanooga, Tenn., high-school student. He constructed a small laboratory at home and experimented with chemicals, particularly those of an explosive nature. One of his mixtures was described to the chemical-warfare laboratories and pronounced a wholly new explosive. The boy chemist was awarded a four years' scholarship at the laboratories.

By JOHN T. BRADY

WHERE in the heavens should we look for the actual center of the visible universe, or to be more precise, the central nucleus of our galaxy, the discovery of which has been officially announced by Dr. Harlow Shapley, director of the Harvard astronomical observatory, after years of painstaking research by himself and his associates?

Can it be seen with the naked eye? How far away is it, and what are its dimensions and its composition? Is there a massive core, or nucleus, a supercenter of gravity around which our whole solar system rotates, much as the earth does about the sun? Is it an ordinary collection of bunched stars comparable with that in the vicinity of the sun, or are we in an enormous pinwheel, or spiral nebula, that is swishing the earth around through space on one of its tails, like a boy hanging on for dear life near the end

Composite Photograph from Harvard-Observatory Plates, Showing the Point in Sagittarius Fixed as the Actual Center of the Visible Universe, Top, and a Diagram Showing the Universe as a Flattened Disk; the Circle Marks Our Own Solar System

of the line in a game of "snap the whip"?

For centuries astronomers have speculated on the problem of the center of the universe. It has gripped their imagina-

of the Universe

The Eyepiece End of a Big Telescope: This Instrument Has Been Built for an Observatory at Kembang, on the Island of Java, Where Conditions Are Good for Observation

1921

tion much like the prospect of making gold from baser metals enthralled the fancy of the alchemists of old. But until quite recently, in fact, until Doctor Shapley perfected methods of measuring star distances photometrically and applied these methods to the problem of the distances and structures of the star clusters, the solution remained an elusive mystery.

Ancient astronomers, whose observation of the stars was limited to what could be seen with the naked eye as they tended their sheep, saw only four or five thousand altogether—hardly two thousand at any one time—and believed the earth was the center of the universe.

A natural vanity led most early speculators to this assumption, in Doctor Shapley's opinion, and it is not yet extinct. But with the development of the telescope, which enabled the scien-

tific star gazer to probe deeper into space, sun worship began to die out in the ranks of the philosophical astronomers. Gradually they began to realize that our sun was but one of many millions of stars, and a very tiny one at that.

Then speculation as to the center of the universe began to run riot, and various celestial objects, such as Sirius and the Orion nebula, were suggested as being the central place. Measurements of the motions of stars, suggesting rotation about some central mass or masses, led, within the last century, to the notion that the Pleiades or Perseus clusters might be the controlling bodies, and more recent extensive star counts induced various investigators to locate the center in the Milky Way.

Dr. Harlow Shapley, of Harvard, and, Top, Omega Centauri, a Globular Star Cluster in the Southern Milky Way; Bottom, the Southern Milky Way Itself

Copyright, S. W. Clatworthy

Diagram of the Universe; the Abbreviation "L. Y." Means Light Years, the Distance Light, Traveling at 186,000 Miles a Second, Will Go in One Year; This Is the Astronomers' Measuring Unit

Doctor Shapley carefully explained that he had discovered the nucleus of only that universe with which astronomical science is familiar and which it can measure at the present time, or in other words, the center of one particular comprehensible universe, and not the center of centers of all stellar creation.

So he describes his discovery as the nucleus of that group of stars of which our sun is one infinitesimal member, and which doesn't include the tens of thousands of other universes that lie beyond the limits of our galaxy.

"Really what we have found," he went on, "is the central nucleus of a large, very much flattened cookie-shaped system, somewhat irregularly circular, that is composed of perhaps 30,000 million suns. That's the best numerical estimate we have, but I think the actual number is very much above that figure. And sprinkled around among them may be any number of planets which we cannot see.

"Our sun then is one of about 30,000 million stars that form a great organization called the galaxy, and the planets, such as the Earth and the others that we see in our solar system, are a very insignificant part of it.

"When we begin thinking about finding the center of the galaxy, therefore, we are faced with a curious problem, for here we are on a tiny little planet going around a dwarf star, and as we look out into space, we see stars in all directions, the nearest one to us being our sun, 93,000,000

miles away, and it is twenty-five trillion miles from our solar system to the nearest star."

Doctor Shapley took up this problem in 1915 while he was attached to the Mt. Wilson observatory, at Pasadena, Calif., prior to coming to Harvard, and the method he developed then of measuring star distances photometrically introduced a revolution into the concepts of the universe and paved the way to the discovery of the center of our galaxy. At that time, the diameter of the Milky Way was estimated at 20,000 light years and our sun was thought to be near the center of it.

Realizing that the globular star clusters, which are especially numerous in the southern Milky Way, would be of much importance in studying organizations of the higher orders, and particularly useful in helping to measure the dimensions of our star system, Doctor Shapley first undertook to measure the distances of about seventy of them, all that were then certainly recognized.

And in studying the famous star cluster in the constellation Hercules, known as "Messier 13," for example, he found its distance to be about 35,000 light years from the earth. Small stars among the 50,000 in this group were found to be 100 times as large as our sun, while the more brilliant were a thousand times as big as Old Sol.

"All of the globular clusters were found to be immensely remote," he explained, "and at the same time their distribution is

Our Galaxy as Seen Edgewise, the Small Circle at Left Marking Our Solar System; the Crosses Represent Globular Star Clusters Outside Our Galaxy, as Diagrammed by Doctor Shapley

such that we can derive from it the form and extent of our whole star system, since they are certainly part of our galaxy, and probably outline the whole system of thousands of millions of individual stars. The most remote of these star clusters is so deep in space that light from it requires 2,000 centuries to reach the earth, notwithstanding its inconceivable speed of over 11,000,000 miles a minute.

"Analysis of the distances and distribution of the globular star clusters indicated that they form a greatly flattened, irregularly assembled stellar system, and that our sun is not in the center of it or anywhere near the center, but halfway toward the outer edge.

"I got a distance of 200,000 light years as the diameter from one edge to the other, and all my measurements and the high concentration of the globular clusters in the constellation Sagittarius (The Archer) intimated

that the center was in that region. In order to check up on this, I started, here at Harvard, several years ago, a systematic investigation of the variable stars in a belt twenty degrees in width. To cover thoroughly the Milky Way, we divided it into 240 fields, and ever since, night after night, we have been photographing it with four telescopes. The study of these plates will enable us to measure the distances of the variable stars, and a knowledge of their distribution in space will give us more light on the structure of our own galaxy.

"About three-fourths of all the variable stars ever discovered, by the way, have been found by Harvard observers, and the total was only in the neighborhood of 5,000 up to about a year ago. But within

The New Twenty-Four-Inch Telescope for the Javanese Observatory at Kembang Has a Six-Foot Tube, Forty-Six Feet Long

the last year we have found about 1,000 new ones. We expect the search to go on for ten or fifteen years before we have found all the variables.

"One of the first results of our concentrated effort to fathom the depths of the Milky Way came when, with the able assistance of Miss Henrietta Swope, we found a heavy concentration of stars in the constellation Sagittarius at a distance of 47,000 light years from the earth.

"Already a dozen or so clouds or clusters of the remote Milky Way have been found on the Harvard plates, one of which shows a special cloud of nebulae in the constellations of Coma and Virgo, off 10,000,000 light years from our galaxy. Its center is the center of one of the universes of universes.

"But the solution of the mystery of the direction and distance to the center of centers—to that remote point in space which is the center of gravity for all the tens of thousands of galaxies—will have to await the completion of our nebular survey which will take from ten to fifteen years more; and it may never be solved."

There is pretty good evidence to show that our whole solar system is rotating about the nucleus in Sagittarius, according to Doctor Shapley, and he is supported in this view by conclusions drawn by observers all over the world. Doctor Shapley estimates the speed of rotation at about 200 miles a second, and looked at from the north side, the direction of rotation is clockwise.

Unfortunately the actual central point of our galaxy, as determined by Doctor Shapley, is hopelessly obscured from our vision by impenetrable clouds, he explains, but if you are curious to see how it appears to the naked eye, look for it in the southern Milky Way at a point where Scorpio, Ophiuchus and Sagittarius corner together. In the spring, it will be seen due south in the early evening.

"What we seem to have found," continued Doctor Shapley, "is definite evidence that the Milky Way has a massive nucleus composed of billions of stars located in the direction of Sagittarius, but so large that it flows over into Scorpio and other constellations. This nucleus has a diameter of probably 25,000 light years.

"But beyond the limits of our star system, nebulae are scattered through space. They turn out to be other stellar systems,

comparable to our galaxy in form and composition. There are hundreds of thousands of them, mostly too far away to be accurately measured, but apparently smaller than our system."

2108 AUTOMATIC BRAKE FOR AUTO PROMOTES SAFETY

Brakes are applied automatically as soon as the foot is removed from the accelerator in a safety system a Swiss inventor has developed. The brake is on when the car is in neutral gear, but is released with the shift to first and operation of the accelerator. It is said to hold the car on hills without the use of the handbrake and is intended to be of great service in the event of danger ahead. Few drivers forget to take the foot from the accelerator in case of trouble, but not all know how to stop the car promptly after that.

2084 ENGINE HALF A BLOCK LONG HAS THIRTY-FOUR WHEELS

Designed especially to burn a grade of coal of comparatively low heating value, a huge engine constructed for the Northern Pacific railway is 125 feet long, weighs more than 1,000,000 pounds and has thirty-four wheels, including the twelve on the tender. An interesting feature is the mechanical stoker which will crush, deliver, and distribute about the huge fire box, more than twenty-two tons of coal an hour. It is expected that the locomotive will be able to haul, in one train, cars that are now made up into two.

Powerful, Huge and Yet Easily Managed. This Locomotive for the Northern Pacific Railway Is Especially Interesting Because It Has Been Designed to Burn a Low Grade of Fuel

DINING CAR WITHOUT WHEELS SERVES AS SCHOOL

Chefs Teaching Pennsylvania Railroad Cooks Some of the Fine Points of Preparing Cuts of Meat; the Schoolroom Is an Exact Duplicate of a Real Dining-Car Kitchen; the Railroad's Yearly Requirements for Meals Include 2,000,000 Pounds of Meat and Fowl

Serving in the Model Dining-Room Compartment, a Copy of a Car; Student Waiters Are Taught Politeness, Speed and Accuracy While Learning to Set Tables and Pamper Particular Patrons

To train cooks and waiters under conditions resembling, as nearly as possible, those encountered on an actual run, the Pennsylvania railroad has built exact duplicates of dining cars in three commissary buildings and now maintains schools at New York, Columbus and Chicago. Every feature, from cooking utensils, range, broiler and pantry, to the dining room and table for patrons, has been reproduced precisely. Even the familiar aisles and corridors have been retained and made to conform exactly with the standard dining-car specifications. In fact, everything is almost exactly the same except that the stationary school does not move. But, officials declare, after waiters have been trained in a schoolroom of the same proportions as the place in which they are later to work, they have less difficulty in balancing trays and passing around corners, even when the car is crowded and the train is speeding around

a curve. The average dining-car employe spends about three hours at school each week while assigned to his regular run. At intervals, he is detailed to the school for a week or more of intensive training. Under a staff of specially trained instructors and supervisors, cooks learn how to prepare various cuts of meat, and poultry of all kinds; how to make sauces and dressings, and they become familiar with the special utensils used on a dining car and also become accustomed to working within the restricted space afforded in a dining-car kitchen. The schools have been established largely because of the railroad's extensive dining-car operations and the difficulty of giving instruction in an ordinary kitchen or schoolroom. The line now has 183 dining cars which serve an average of 12,000 meals daily, or approximately 4,000,000 a year, and are using 2,500 tablecloths and 15,000 napkins every day the year around.

Long Island City

210 4
 6600 Willard Ave. St. Louis Mo
 St. Louis Auto Dealer's Salvage Yard
 4639 Montgomery Ave
 Bethesda Md.

Saving All but

Corner of a Graveyard for Motor Cars That Have Outlived Their Usefulness in St. Louis; No Car That Enters the Yard Leaves Again under Its Own Power

A NEW style of establishment for the efficient disposal of aged automobiles which menace public safety has been fostered by the organized motor-car merchants of St. Louis.

These dealers have banded together in a traffic-safety campaign to eliminate veteran cars with defective brakes, steering controls, and similar imperfections, from arterial highways and intersecting streets. Their co-operative undertaking plant is an efficient salvage station where all but the squeaks and rattles from old cars are reclaimed.

This salvage station is quite different in operation from the ordinary automotive junk yards. Its rigid rule is that every car purchased must be dismantled. The majority of the cars are delivered at the plant under their own power, but that trip is their touring swan song. Dilapidated automobiles are purchased by the thousand both from the dealer members of the association and from the general public. The prices paid range from \$2.50 to \$40, the average automobile being bought for \$20. The salvage is so complete and detailed that \$40 worth of accessories, repair

parts, equipment and raw manufacturing materials will be recovered from each machine and sold.

The plan not only accomplishes its primary purpose of ridding the congested streets of dangerous cars, but it brings this to pass at a profit. The salvage yard has fixed \$100 as the minimum price for used cars which the reputable dealers will handle. They hope to raise this limit to approximately \$200 during the next year. All cars of lower value are catalogued as unsafe, and are delivered to the salvage station as automotive "sacrifices."

The batteries, generators, starters and radiators are removed from the cars, inspected and tested. If found in good order, they are reconditioned and sold directly through the retail shop connected with the salvage plant under a ninety-day guarantee. These parts usually are in fine serviceable condition even though removed from worn-out machines, because they are replaced periodically and maintained better than the millrun of working parts in the old automobile.

In wrecking the cars, the windshields as well as the window glass in closed cars

the Squeaks

One of the Powerful Electric Shears That Bite Ancient Automobiles into Small Pieces, Ready to Be Melted Down and Used Again; It Is Working on a Pile of Rims

are removed, sorted and graded as to size and model of auto which they will fit. The ordinary junk man rips all upholstery from the car and burns it. The St. Louis wrecking establishment reports attractive returns from the salvaging of moss, hair, cotton, burlap and leather from upholstery. This project pays the entire expenses of its acetylene-torch shop, where the motors are removed and the chassis dismembered.

An electrified monorail system removes the motors from the torch shop and delivers them to the yard unit, where they are scrapped in order to recover the different metals they contain. Bronze, high-carbon steel, number-one melting steel, bearing metal, copper, aluminum and cast

iron, which are sold for from seven to twenty cents a pound, are reclaimed from the engines.

Some bodies are removed and sold intact for from \$25 to \$50 apiece, but the majority of bodies, fenders, steel tire rims, rear axles and other worn-out parts are chewed into smelter material, called "busheling," in the jaws of mighty electrified shears. When working at capacity, one of these shears will reduce fifty ordinary automobile bodies, fenders and other discarded equipment into metallic mince-meat in one day. This busheling sells for an average price of \$8 a ton.

The macerated material is allowed to accumulate in huge piles until some ten carloads of the junk are ready for ship-

Hair, Cotton, Moss and Leather Are Salvaged from Upholstery, and the Profits Run the Acetylene-Torch Shop

cars. This magnet lifts 500 pounds of the material at a time and eliminates costly hand labor. The sorting and grading of salvage metals is so thorough that the steel mills pay premium prices for the metal mincemeat which is unloaded, also by magnet, directly from the cars into the furnaces. The automobiles which owners have sold to the salvage experts subsequently may come home again to roost in the form of new radiators, boilers, bathtubs or plumbing fixtures.

Building contractors buy old automobile springs by the ton from this St. Louis salvage enterprise. The springs subsequently serve as

ment to the smelter. A powerful electromagnet is used in loading the scrap on flat

ideal reinforcement for new concrete construction and are in keen demand for that

Tires, Batteries and Generators, Along with Other Kinds of Parts, Are Salvaged and Resold for Further Use; Thousands Are Put Back on the Roads Each Year

purpose at \$20 a ton. Everything else that is merchantable is also reclaimed and sold. Repair parts for practically all types and models of American and some foreign automobiles are obtainable at low prices at this hatchery of new automotive trade ideas.

Its originators hope to see this St. Louis scheme of co-operation in the salvaging of venerable and crippled motor cars flower into a national organization. This body, as visualized in motor-world day dreams, would be the country-wide core of chains of salvage stations which would speckle the

The menace of these roving automobiles — breeders of future tragedies — must be faced and then effaced from county, state and national highways. The St. Louis plan at least is a stepping stone toward

this goal until some better plan, if any, is devised.

Closed Bodies, if in Good Condition, Are Resold at From \$25 to \$50 Each; Bottom, Portable Torches Cut Up the Scrap

American map. If every large city supported such a co-operative plant, it would not take long to exterminate unsafe motor cars from the traffic picture.

Such a project would also aid in standardizing and stabilizing used-car values and would force out of business the fly-by-night sandlot dealer who barter in "anything and everything that will run." Of the 25,000,000 automobiles now in use in the United States, at least one-sixth are possible "death cars" that are unsafe to operate in city-speed congested traffic or in open-country running, where many drivers travel at racing speed.

ELECTRIC HEAT "BY THE FOOT" REPLACES STOVE

For warming small rooms and restricted spaces, an electric heater in the form of a slender bar, two feet long, has been introduced. It is thoroughly insulated, can be installed almost anywhere and operates with direct or alternating current. It is especially adapted for service in watchmen's houses, garages, vaults and show windows, and may be used singly, in pairs or in groups, as required.

Electric Heater, and Illustrations of Uses

Spraying Man with Gas That Freezes Fires; It Causes No Damage to Fabrics When It Dries

FREEZING GAS CURBS FIRES AND REDUCES DAMAGE

Improved apparatus has been developed by several fire departments for the use of carbon-dioxide gas in extinguishing blazes. This vapor freezes as soon as it is released from its containers and, by lowering the temperature of the surrounding area and cutting off the oxygen supply, is effective in putting out fires. When it melts, it entirely disappears without leaving a stain and is therefore especially suitable for use in quenching fires in stores and other places where the goods would be damaged by water.

ALUMINUM MIXED WITH GOLD AIDS DENTAL WORK

Aluminum is combined with other metals, according to reports of processes developed by a San Francisco inventor, to form valuable alloys. With gold, a hard, light alloy is prepared; a silver mixture so hard that it can be sharpened to a razorlike edge is also made, and copper is made suitable for use in tools. The gold alloy does not oxidize, it is said, making it especially useful in dentistry.

FILTERS SALVAGE COAL DUST FLOATING ON RIVER

Coal dust, floating on the river Ebbw, which flows into the Bristol channel in England, is to be reclaimed and used for heating purposes, by installing settling tanks and filters where the stream drains the land around the mines. Besides purifying the water, the plan is expected to make available considerable quantities of fuel at prices lower than the present scale for grades of corresponding quality.

SPEED-SHIFT WASHER DOES BETTER WORK

One of the most interesting improvements in washing machines is an electrically operated outfit that has a speed-shift arrangement which requires no clutch or gear mechanism. Its speed is regulated simply by turning a small handle. The machine can thus be used more efficiently for washing different fabrics, some being cleansed better at low rather than high speed and not so likely to be torn. Furthermore, the speed shift prolongs the life of the washer and the absence of a clutch and other bothersome mechanisms is a great convenience to the housewife. The washer is the invention of an automobile engineer and is in line with similar improvements being developed for cars to eliminate gear shifts on them.

Fresno Dec. Fresno, Calif.

"BARN-DOOR" MILL HARNESSSES THE DESERT WINDS

View of the Entire Mill, and One of the Blade Units, Showing Size and Arrangement

Travelers near Fresno, Calif., are sometimes startled to see what appears to be a number of barn doors flying through space. Closer examination shows that the rig is a sixteen-bladed windmill which a Dutch inventor has devised to run two pumps and a dynamo at the same time. Oddly enough, a barn door was the inspiration for the idea. The inventor once watched a ranch hand trying to close a barn door against the wind. The difficulty of the task prompted the plan of building a mill with large, flat blades like those of a paddle wheel. The idea was developed, the blades being arranged to turn a shaft which was geared to the pumps and the dynamos. An advantage of the scheme at this particular farm is that the mill is placed where no obstructions reduce the force of the wind so that a high tower is unnecessary. At the same time, the inventor has devised a way to decrease the resistance from the back stroke of the blades by erecting a wooden

wall which covers the lower part of the mill at the rear. Under favorable conditions, the rig is said to be the equivalent of a fifty-horsepower plant. A steady stream of water is afforded by the two pumps.

RADIO RECORD ON DICTAPHONE SPEEDS NEWS REPORTS

Radio and the dictaphone have been linked in Oregon to speed the distribution of stock-market reports. The radio voice is recorded directly on dictaphone cylinders from which a stenographer pre-

pares copy for the newspaper presses. The experiment was successfully performed under the direction of the state agricultural college to insure the speedier distribution of market reports throughout the rural districts, and adaptations are contemplated to make possible the continuous recording of similar broadcasts.

Model of Proposed Hotel for Lake Resort; the Boatlike Plan Permits Wide Promenades and a Good View

BIG HOTEL IN FORM OF BOAT FEATURES LAKE RESORT

Modern ideas predominate in a hotel a German architect has designed for erection in one of the lakes near Dortmund. It is to be built in the form of a boat and has wide promenades like inclosed decks, a coffee terrace, dance pavilions and large dining rooms overlooking the water, besides the usual hotel rooms. A special feature is to be the illumination both inside and out. At night, rays from thousands of electric lights will make the hotel visible from great distances. A fine view is enjoyed from most windows.

SLIDING-BEAM COMPASSES PROMOTE ACCURACY

Designed to eliminate the faults most frequently found in ordinary compasses, a new instrument is made in the form of beam compasses, but small and light enough to be used with one hand. It is claimed that the point of these compasses will not slip and tear the paper, and the

adjustments are such that no small errors can occur in setting or in frequent use. The instrument will draw circles up to eight inches in diameter.

SAFETY THROTTLE FOR AUTOS HELPS SAVE GAS

Greater safety in driving, economy in gasoline, and convenience are some of the advantages claimed for an accelerator-control throttle attached to the gear-shift lever. It permits shifting from one speed to another

without removing the foot from the brake pedal, prevents killing the motor and provides the "extra arm" so often needed while driving in crowded traffic. The device is attached in a few moments, and no alterations in the car are required. It provides an easy way of operating the accelerator by hand instead of by foot control and at the exact time when more gas is needed.

With the Engine Placed behind the Driver and His Mechanician, the New English Speed Boat, Which Is Coming to America to Race, Presents an Unusual Departure in Design

ENGINE IN EXTREME STERN OF NEW SPEED BOAT

A twenty-six-foot hydroplane, powered with a 900-horsepower 12-cylinder Napier airplane engine, is being brought to America by Maj. H. O. D. Segrave, the famous racing-car driver, to attempt to lift the world's speed record on the water. He is bringing his new racing car, the "Golden Arrow," to attempt the same feat on land. The unusual feature of the boat is that the engine has been placed in the extreme stern, with the pilot and mechanic in front of it, reversing the usual arrangement. The position of the engine is expected to increase the planing action of the one-step hydroplane hull at high speeds. The engine is similar to that in his racing car, and is the same type that was used to win the Schneider cup from Italian flyers last year at Venice. Reports from England rate the boat at over eighty miles per hour, but this speed will have to be exceeded to better the record set at Detroit last September, when Gar Wood's "Miss America VII" averaged 92.834 miles per hour in six one-mile dashes.

ALL UNDER THREE FEET RIDE FREE IN BUSES 2159

Height, not age, is to be the determining fare factor on an eastern motor-bus line. All persons thirty-six inches tall or less, will be carried free. Those taller

will pay the fare regardless of their age. To prevent disputes, a height gauge has been installed on the doors of the vehicles. Children whose heads overtop the mark must pay.

LOUD SPEAKER FOR TELEPHONE LEAVES HANDS FREE 2115

To amplify the voice from the telephone, a loud-speaker attachment has been devised so that the listener does not have to hold the receiver. An arrangement is also provided whereby the hookup may

Telephone Conversation Being Amplified through the Loud Speaker Attached to Receiver

be connected with a radio combination on the telephone instrument.

Where Men

bottom of ships, but the barnacle itself is but one of a number of such organisms, although the principal one. These growths accumulate rapidly on the hulls, sometimes projecting many inches. Only a fraction of an inch is necessary, however, to impede materially the ship's progress. Increased

By C. MORAN,

3825-13 11/12/38 Washington DC

MEN who eat corn mixed with liquid titanium tetrachloride, a chemical used to make military smoke screens; who subject themselves to the deadly carbon monoxide of automobile exhausts; who handle chemicals, a single drop of which eats flesh to the bone, are experimenting at Edgewood arsenal, Md., in the production of new war gases and chemicals and in the utilization of these elements in industry.

Recent research at this laboratory has shown that the useful life of rubber may be prolonged by treating it with certain anti-oxidants; that the minute, natural "one-man tanks" of the seas—the marine borers—which have sent to the bottom more wooden ships than all the guns of war, can be halted by Lewisite, a deadly warfare chemical.

A toxic paint has been developed to prevent the formation of barnacles on the hulls of ships, which cause an annual loss of \$75,000,000 in fuel alone. Barnacle is the term commonly used for all marine organisms which attach themselves to the

Testing Poison Gas on Plants at Edgewood Arsenal, and Field Truck Used to Measure Gas Content of Air; It Is a Complete and Compact Gas Laboratory and Does Away with the Chance of Errors

Defy Death

fuel consumption of a vessel handicapped by barnacle growth sometimes amounts to twenty-five per cent.

Every vessel must be drydocked periodically for barnacle cleaning, the frequency of such cleaning depending upon the service of the vessel as to seasons and latitudes. The marine growth is active during the entire year in the tropics and only during the summer in the temperate zones. The paint devised by the war chemists is being used on destroyers in final tests to determine the relative life and cost of hot plastic paints and cold varnish paints.

The erroneous idea seems to be quite prevalent, say these chemists, that all chemical agents of warfare are toxic. In a recent demonstration, a smoke curtain was dropped from an airplane which was passing over a cornfield. Some of the liquid titanium tetrachloride fell on the leaves and ears of corn which subsequently became discolored. The farmer claimed that his crop had been damaged and demanded reparation.

A number of the more discolored ears were sent to the arsenal for test, and it was disclosed that neither liquid titanium tetrachloride itself, nor the products formed when it produces smoke—hydrochloric acid and titanium oxide—are harmful to eat. The discolored ears were eaten without producing any bad effect and the same was true with grains of corn mixed with a small quantity of titanium tetrachloride. All the discolored corn

Not a Spiderweb but a Hemispherical Vision Chart. Used to Measure Angle of Vision of Various Gas Masks

was purchased and fed without injurious results to the live stock at the army post adjoining the cornfield.

The pestilence of certain species of birds which are harmful to agriculture or which deface buildings has long been the subject of investigation by the biological survey. Recent experiments have been made in endeavoring to exterminate these species by the use of chemical gases, but curiously enough the birds emerged from the gases unhurt. It was found that birds have rather marked resistance to toxic gases, and furthermore, that it is difficult to build up, out of doors, sufficiently high concentrations of these gases to be effective over extended areas.

During the war it was noted that pigeons almost always returned to their cages safely when liberated in a gas cloud. This

Fumigating a Bakery Badly Infested with Flour Weevils; Deadly Poisons, in Bags, Are Dropped into Jars Containing Another Poison to Create the Clouds of Lethal Gas

was quite a mystery until it was realized that the pigeons escaped by rising quickly above the gas. The tests showed that crows attempt to fly out of the gas cloud in the same way as soon as its irritating effects are felt.

Methods of extending the life of rubber many times its normal life have been developed as a result of experimentation to prevent the rapid deterioration of the hose tube, facepiece and exhalation valve of gas masks. Such deterioration made difficult the problem of maintaining a war reserve of gas masks. Initial tests revealed that methods of curing rubber had an important effect upon its life. Under-cured stock, lacking sufficient sulphur, becomes soft and even sticky with age, while overcured and bloom stock, containing an excess of sulphur, becomes brittle and cracks. As a result of the tests, faulty cure has been corrected and facepieces are now molded individually. This has developed an increase of the useful life under normal storage conditions from a few years to approximately thirty-five years.

Another improvement in rubber has been developed with anti-oxidants. These chemicals, when incorporated in rubber compounds, materially reduce or retard

rubber deterioration due to oxidation. Tests indicate improvement that may prolong the useful life of rubber to sixty years. For protection against sunlight, a compound has been developed of rubber, pigments, dyes, and softeners dissolved or dispersed in a suitable solvent. Methods of storing gas masks in inert atmosphere, such as nitrogen, also have been devised.

The marine borers have been halted by Lewisite in the hands of the government chemists. Indications are that battles, started long before the sinking of the Spanish Armada, now have been brought to an end by the application of a derivative of Lewisite in the path of the disastrous marine borers, such as the teredo, bankia, martessa and limnoria.

These mollusca and crustacea have been recorded in history as being responsible for the sinking of many ships of the Spanish Armada and of boring to weakness the timbers of the dykes of Holland, and they have caused millions of dollars of damage to the wharves of the world by eating the wooden piling.

Creosote long has been applied as a temporary barrier to these pests, but for many years the war-department chemists

Coal tar

have been experimenting upon a more permanent defense. Tests have been completed to show that organic compounds of arsenic, mercury and copper have been of the greatest general toxic value against the marine borers. Of the arsenicals tested, those which were either chemical agents of warfare or derivatives of these chemicals were most effective. A derivative of Lewisite—chlorovinylarsenious oxide—

has the highest toxic value.

Solutions of the following compounds in creosote have stopped the borers from passing into the treated portions of test piling after they had riddled bait strips attached to the piling: copper orthonitrobenzoate, mercury benzoate, mercury resinate, mercury stearstendiphenylamine-chlorarsine. Straight creosote impregnations did not stop the borers.

Following a recent explosion in an Alabama coal mine, eight men

Apparatus Used to Test War Gases on Human Beings, and, Above, One of the Side-Line Developments: Treating a Race Horse with Chlorine as a Cold Cure; the Gas Treatment Is One of the Accidental Discoveries of War Days Which Has Proved Successful in Peace

Testing the Tensile Strength of Rubber Treated with Chemicals That Prolong Its Life to Sixty Years

were trapped in the fifth right heading, their only means of escape blocked by afterdamp, the gaseous products of the explosion containing the deadly carbon monoxide. Two of the men who tried to make their way through were overcome by the gas and died. The others waited for help and, when equipped with self-rescuers, the chemical filling of which is a product of chemical-warfare research, made their way through the firedamp unharmed.

The self-rescuer is a commercial pocket-size respirator consisting of a canister which is fitted with a mouthpiece, nose clip and exhalation valve. The chemical filling of the canister, which eliminates carbon monoxide from the air breathed, is a mixture of metallic oxides, known as "hopcalite." Hopcalite is employed not only in the miners' self-rescuer, but also in gas masks for firemen and other workmen who may encounter dangerous concentrations of carbon monoxide. It is also used in carbon-monoxide recorders and alarm devices, such as in the recently

In Developing Commercial Uses for New Chemical Mixtures, the Army Gas School Uses This Tank Apparatus to Test the Effects of the Gases on the Human Constitution

constructed underwater Holland tunnel between New York and New Jersey.

Prior to the discovery of hopcalite, there was no type of gas mask which would provide protection against carbon monoxide, other than the oxygen inhalator, a cumbersome type of equipment which is a self-contained mask with its own supply of oxygen. It was discovered, ultimately, that a specially prepared granular mixture of the oxides of copper and manganese will change carbon monoxide when mixed with oxygen of the air, to carbon dioxide, a relatively harmless gas. This mixture of metallic oxides is called "hopcalite" in honor of the two universities, Johns Hopkins and California, where the basic principles were evolved.

AUTO VALVE-SPRING TESTER HELPS SAVE GASOLINE

Balanced springs insure better performance of the automobile motor with consequent saving in gasoline, faster pick-up and other advantages. To detect weak and faulty springs, a simple tester has been introduced. It is arranged so that the springs can be tried while in the block or when removed, and operates accurately. The entire test can be made in a few moments. The state of the springs is determined by a gauge.

It takes about two years for a baby whale to grow to an adult.

Composite Drawing of Proposed Traffic Plan in Paris, Where Double-Decked Streets and Cross-Overs Are under Consideration

TWO-LEVEL STREETS PLANNED TO SPEED PARIS TRAFFIC

One of the plans under consideration for relieving the traffic situation in Paris involves the building of two-level streets. An elevated pavement would be provided for pedestrians only, and the stores would have entrances and show windows on this level. Bridges would be constructed at street crossings. The level for vehicles would have space for parking cars and stairways would be provided at convenient locations. A feature of the plan is the concealed tubular lamps which would eliminate need of electric-light standards.

TWO MILLION PENNIES A WEEK USED BY BIG STORE

Pennies at the rate of seven tons a week were used by a large New York department store during the holiday season. One reason for the huge demand was the fact that most of the merchandise was priced at odd figures, and as the store's business is done on a cash basis only, pennies were needed for practically every transaction to make the proper change.

Demonstrating the Table Basketball Game; the Ball Is Sent into Baskets by Striking Projecting Sticks

BASKETBALL PLAYED ON TABLE LATEST PARLOR GAME

Table basketball, a game devised by a student at the Kansas agricultural college, has appeared in the form of a simple outfit that will amuse the players as well as spectators, and also test the skill. It consists of a metal box, the top of which is a cardboard field, depressed in the center to permit the ball to roll into any one of a number of holes along this part of the field. At either end is a small woven basket on an upright. By striking down on the end of small sticks or levers that extend under the field to the holes and project a short distance at the sides, the ball is thrown up out of the hole and, if properly propelled, falls into a basket, scoring two points for the player. The sticks on one side reach only certain holes and those on the other reach the rest, so that opposing players can "shoot." If the ball is struck off the field, a foul is counted and the other player enjoys a "free throw," a chance to shoot for a basket just as in the real game.

INSECTS AS LEPROSY CARRIERS STUDIED BY DOCTORS

Studies are being conducted by the army research board at Manila to discover if insects may not be carriers of leprosy. The investigation was started several months ago and, although but one case of transmission of the disease by a mosquito has been definitely recorded, the experiments are still under way. The insects are allowed to visit leprosy patients and then to bite volunteer subjects, men who, with the permission of the late governor-general, have been selected from among prisoners serving long terms. After more than sixteen months, none of the volunteers has been affected, but this is not long enough for final decision in the matter, and it is pointed out that none of the subjects may be susceptible to the disease. The cause of the spread of the malady is still a mystery. Married couples, one of whom has leprosy, have lived together for years without the other one acquiring the disease. Climate and density of population have been thought to have some connection, but they alone cannot be the reason for the spread of leprosy, studies have shown. Insects do not always acquire the germs after feeding on leprosy patients and, in the rare instances when they do, they do not always immediately bite a well person, but doctors still believe that mosquitoes, flies, fleas and other insects may be at least partly to blame.

CARDBOARD MAKES SOUND BOX FOR PHONOGRAPH

As a substitute for the usual sound box on phonographs, a Swedish inventor has de-

Bent Cardboard, Which Is Said to Give Results as Good as Those of the Usual Phonograph Tonearm

vised a way to make ordinary cardboard amplify the tones reproduced by the needle. The cardboard is simply bent and mounted as indicated in the accompanying illustration and attached to the needle by a special mechanism. The invention has been patented.

The Fire at Its Height, Burning in the Upper Stories of Uncompleted Chicago Skyscraper on a Winter Night.

FIRE HUNDREDS OF FEET IN AIR TESTS FIGHTERS' SKILL

Scaffolding, and other wooden parts in a skyscraper under construction in Chicago, caught fire forty stories above the street when the temperature was nine degrees below zero, giving firemen a busy hour before the flames were extinguished. Hose had to be hauled up by hand, while ice and wind added to the difficulties.

RED INK STAINS ON MARBLE REMOVED WITH LIME

When vandals disfigured the Ypsilanti monument at Ypsilanti, Mich., with red ink, city officials were perplexed as to how to remove the stains. A paste was prepared, chiefly of chlorinated lime, and spread over the statue. After it was dry it was removed with a trowel and a fresh coating applied. Each succeeding appli-

cation removed some of the stain until it had been nearly obliterated. A shed was built over the monument during the process to permit warming the chemicals.

FUEL OIL REPLACES GASOLINE IN BUSSES

Successful use of a heavy fuel oil instead of gasoline to run motor busses is reported by an eastern company. This has been made possible by equipping the engine with a special unit, the invention of a New Zealander, consisting of an aluminum pot in which is a nest of thin, curving plates, radiating from a central core. This device is said to help convert the oil into a dry gas before it is passed into the intake manifold. Substitution of fuel oil for gasoline is being watched by engineers who point out

that it would mean an annual saving of not less than \$50,000,000 simply in the operation of motor busses.

LONG PLIERS FOR MANY USES AID IN SHOP AND HOME

Adapted for picking up almost anything from a thread in weight to ten pounds, specially constructed pliers have many uses around automobiles, in the shop or home. The tools weigh but two ounces and are thirteen or seventeen inches long. Putting in valve locks, removing corks from bottles and fastening or removing nuts, etc., are a few typical uses.

are useful.

A Long Bar of Beryllium and a Short One of Steel, Both of the Same Weight, and Chart Showing the Position of the Metal in the Electronic Scheme

see April, Dec 19. 27-961

A WONDERFUL new metal, one-third lighter than aluminum and with most of the valuable properties of steel, will soon be placed on the market. Assuming that its cost is not prohibitive, its use will greatly reduce the weight of airplane engines, and providing its price eventually becomes low enough, it may also be largely employed in automobiles with vast reduction in weight.

The name of this new metal is beryllium, a chemical element like iron, copper, aluminum and lead. While it is too early to state positively just how extensively the material will be utilized, a preliminary investigation suggests that, when it is suitably alloyed with other metals, it may be employed almost any place where iron, steel and aluminum are now used. If this view proves correct, airplane engines of the future may be built almost entirely of beryllium, weighing perhaps half as much as similar engines today which are mainly constructed of steel, cast iron and aluminum.

Strictly speaking, beryllium is not new. That is, it has been known for more than a century, but during all these years scientists

have been unable to develop a suitable process for the extraction of the metal from its ores. Recently, however, a Cleveland scientist and metallurgist, Hugh S. Cooper, and his associates have developed a patented process which permits production of the metal on a commercial scale, and definite steps are now under way for its manufacture.

The existence of beryllium was first indicated in 1797 by Vauquelin, a French investigator. Early scientists tried to reduce the ore to secure the pure metal, but it was not until 1828 that Wohler, the celebrated German chemist, succeeded in producing a laboratory sample. Since that date, various experts all over the world have tried to develop a commercial process but, in spite of their efforts, beryllium remained a laboratory curiosity until Cooper worked out his method.

Many people have the idea that beryllium is a rare metal, but this is far from

c/o Kemet Laboratories 603
 12337 C...

true. In the United States alone, the ore occurs in more than fifteen states and is especially available in Colorado, South Dakota, Connecticut and New Hampshire. In the last state, there is a whole mountain of beryl, a hard, stony substance composed of the oxides of beryllium, aluminum and silicon. In short, there is plenty of beryllium ore all over the world, and the rareness of the metal heretofore has been due entirely to the difficulty in separating it from the other elements in the ore.

It is still too early to say just what the eventual price of beryllium will be, but experience with the development of other metals suggests that the price will be fairly high at first, gradually being reduced as the scale of production increases and still further improvements in methods of manufacture are worked out. In so far as cost is concerned, the future history of beryllium is likely to parallel the past history of aluminum.

Aluminum ore was discovered in 1700 but separation of the metal from its components was so difficult that it was not until 1828 that Wohler produced a few particles in his laboratory. Others improved the process so that a few years later aluminum could be bought for \$115 a pound. In 1854, Deville devised a new method which brought the figure down to

\$7.00 a pound and refinements on this method later cut the price to about twenty-five cents a pound. The future history of beryllium, it is to be hoped, will show a similar price trend.

Pure beryllium is a dark gray metal which takes a high polish like steel. In fact, a polished specimen might be mistaken for steel until it is picked up, and then it is realized that this stuff that looks like steel is much lighter than aluminum.

It is so hard that it cannot be scratched with a file, and since there is a close relationship between hardness and strength, the pure metal compares with steel rather than aluminum in this respect. Beryllium is about five times as hard as aluminum.

A Small Cast-Iron and Much Larger Beryllium Piston, Both Having the Same Weight; H. S. Cooper, Who Developed the Commercial Extraction Process, and the Three Steps, Beryl, the Rock, Beryllium Oxide, in the Bottle, and the Metal

While pure beryllium is very hard, it is also brittle, and for most purposes its brittleness must be reduced by alloying it with various other metals, such as aluminum, copper and iron. Beryllium and aluminum may be alloyed in all proportions, and this is quite fortunate, because one of the chief difficulties in securing pure beryllium lies in the elimination of the aluminum also found in the ore. Hence it is cheaper to make a beryllium-

*Chas. W. Harper, 2076-
Fire Brigade, Sheffield
Yorkshire, England*

aluminum alloy than it is to produce the pure metal.

Beryllium, of course, is so new that most of the possible alloys of this material with other metals have not yet been made and tested, but what has already been done suggests that in a reasonable time an amazing beryllium alloy will be discovered.

DISTANT SWITCH STARTS AUTO SAVING DRIVER TIME *2111*

For speedier response to fire alarms, an officer of an English fire brigade has devised a remote-control starter for the motors of the apparatus. Throwing a switch in the office, or other convenient location, starts the engines of the cars so that they are ready to go the instant the driver reaches his seat. The device can be applied to private uses. Physicians, for instance, could install a switch in their bedrooms and start the auto engine running at the distant garage so that time would be gained in answering a call.

HOLDER FOR BABY'S BOTTLE *2891* FITS ON HIGH CHAIR

Attachable to a high chair or baby carriage, a holder for the nursing bottle is made of spring wire, covered with white rubber. It prevents the infant from spilling the milk or breaking the bottle.

Bottle Holder on Baby's Chair Prevents Breakage and Spilling; It Is Covered with Soft Rubber

Model of Proposed Lifeboat-Lowering Rig, a Track down Side of the Vessel Instead of the Usual Davits

LOWER LIFEBOAT ON TRACK TO PROMOTE SAFETY *589*

A means for the safer and more rapid lowering of lifeboats has been developed by Capt. A. T. Nelson, of Milwaukee, Wis. Instead of the usual system of davits, he has introduced a track which follows the side of the vessel and permits the boat to be lowered to the water on two rails. They hold the small craft from swaying or tipping and are not likely to be obstructed by ice.

THREE-STORY HOUSE OF GLASS *2087*

Plans have been completed for the construction of a three-story glass house on top of a New York building. It will be made of glass "bricks," translucent but not transparent. They will be connected by concrete and steel reinforcing. Interesting effects in lighting will be produced at night, when the house is illuminated from within, the architect promises.

Replacing Electric-Light Bulbs on Top of the Grand Central Building, New York City; Note the Outer Shields

SHIELDS FOR TOWER LAMPS HELP PREVENT BREAKAGE

Electric-light bulbs on top of the thirty-six story Grand Central building in New York city are protected with outer glass shields to guard them against damage by winds and driving snow, rain and hail. Bulbs installed in such places, where they are exposed to the full force of the elements, break more frequently than in more protected spots, and special means are devised to reduce replacements to a minimum. Fitting new bulbs is not always an easy task, although, in the case of the Grand Central building, the workers have little difficulty and run small risk of accidentally falling, because the protruding ornaments on the tower offer abundant hand and footholds.

SMALL BIRD PUTS OUT LIGHTS BY SHORT CIRCUIT

Electric lights in an English town were suddenly extinguished the other night. The cause was a short circuit on the line resulting when a small bird evidently attempted to fly between the wire and the arms of the insulator. Its feathers established a contact, bringing about the short circuit. Such cases are rare, for small birds alight on power lines, on third rails and other conductors without injury to themselves or damage to the system, the reason being that they seldom establish a "ground" whereby the current can be short-circuited. Larger birds often come to grief and sometimes when small birds are flying in flocks, the necessary contact for a short circuit will be established between members of the flock. Small birds are often killed in pairs in

this way if the tail or a projecting wing of one that is sitting on a live wire or rail comes in contact with the body of another bird through which a ground is formed.

FLOAT PREVENTS SKIN ON MILK— 2047 WHILE BOILING

To keep skin from forming on the surface of milk while being boiled, a hollow metal float with a knob has been introduced. It is placed on top of the milk be-

fore boiling and removed after the liquid has cooled to about 122 degrees Fahrenheit.

The float is made in a range of sizes to fit various pans, and is said to operate effectively.

"JOY RIDER" FOR AUTOS IS THE LATEST AMUSEMENT

Wayside Thrills for the Motorist; a "Scenic Railway" Idea Adapted for the Automobile in a Drive over Hills Made from Piles of Earth; an Admission Charge Repays the Owner

Motorists are enabled to experience some of the thrills of an amusement park without leaving their cars, on a "joy rider" road built near a Texas highway. For an admission charge of ten cents, autoists drive into a large field where a road that passes ocean-wave fashion over a series of small hills scooped up out of dirt, gives sensations like those of a roller coaster.

ENGLAND BUILDS SECRET PLANE TO SEEK DISTANCE RECORD

A mystery airplane, secretly built in England, was tested recently preparatory to an attempt to break both duration and distance records. The machine, a Fairy-Napier monoplane of 100-foot wing spread, adds Great Britain to the countries turning to the monoplane. Heretofore, practically all British ships, both large and small, have been biplanes. The 450-horsepower Napier engine is reported to have a special carburation system designed to produce maximum horsepower with a considerably lower gasoline consumption than usual. The ship also is said to be equipped with a type of direction indicator which sounds a horn be-

side the pilot's ear if he deviates from the prescribed course. How the system works is a secret, but it is said to be the result of several years' research work. The ship carries 1,000 gallons of gasoline which is kept in wing tanks. The pilot's seat is fitted with pneumatic cushions to relieve the strain of long hours, and a couch in the cabin is similarly equipped to provide a resting place for the relief pilot. There also is a comfortable chair and a folding table for the navigator. It is planned to try first to break the duration record for unrefueled planes, now standing at 65 hours 25 minutes, and then attempt an 8,000-mile flight from London to Cape-town, with only one stop for fuel.

LIGHT CAST FROM ANY ANGLE BY JOINTED FIXTURE

One of the Many Uses for the Special Light Stand That Has Six Joints

Having six joints of special construction, an electric-light fixture now on the market can be adjusted easily to throw the rays where they are most needed. The fixture may be turned in a complete circle, swung high or low, tipped or turned in any direction, saving time and trouble in re-adjusting the entire standard.

14,000

that he is one of those rare persons, a natural-born flyer.

That is not to be wondered at, for he comes from the greatest flying family in the United States, and, so far as American and British records show, the world. The flying Stinsons have produced four pilots—Katherine, Marjorie, Eddie and Jack—a record believed to be unique.

How does it feel to have spent 14,000 hours in the air?

"I've never given it a thought," Eddie confessed the other day. "It's the one thing I want to do, and the only thing I know how to do—build planes and fly them. I get in six or eight hours every Sunday, usually

flying down to Chicago from the factory at Northville, Mich., to spend the day with the boys at the airport, and, while we have a test pilot, I usually manage to get in a bit of time on every plane we build."

What those bits of time amount to is indicated by the fact that, in the two and a half years since he became an airplane manufacturer at the head of his own factory and began turning out commercial ships and special jobs for transatlantic and round-the-world flyers, he has managed to keep up his average of around a thousand hours a year in the air. Last year, with Capt. George Haldeman, he took a Stinson "Detroiter"—a six-passenger monoplane fitted with special gas tanks instead of passenger seats—down to Jacksonville, Fla., and set up a new world's endurance record of 53 hours 36 minutes and 30 seconds, the second time in a few years that he held the endurance mark.

Eddie Stinson and His Wife Snapped at Mills Field, San Francisco, on Last Summer's National Air Tour

By J. EARLE MILLER

EDDIE Stinson, barnstormer, war pilot and airplane manufacturer, the other day finished his fourteen thousandth hour in the air, a record, it is claimed, no one else anywhere in the world has ever approached.

Fourteen thousand hours represent 583½ days of twenty-four hours each, or the equivalent of about nineteen and a half months in the air, if they were all strung together in one flight.

For a man still in his early thirties to have spent nearly two years in the air is a remarkable thing, but more remarkable still is the fact that after fifteen years of flying, it still holds its lure—the one thing he wants to do. The great majority of flyers, after a few years' experience, retire into something not quite so hazardous, but Eddie Stinson expects to keep on flying as long as he lives. The answer is

The Stinson "Detroiter," in Which the Builder and Capt. George Haldeman Last Spring Broke the World's Endurance Record; a New Ship Is Being Built to Regain the Mark, Now Held Abroad

Both the Italians and the Germans have since bettered that record, but a new Stinson is coming out of the factory shortly to go after it again, and Eddie will be at the controls half the time.

His chief recollection of the two and a fraction days of monotonous flying over the Florida coast last spring is that it allowed him to catch up in his lost sleep.

"We carried an eiderdown quilt and a supply of magazines for entertainment," he explains. "The one off duty would stretch out, read a bit and then go to sleep. I got almost twelve hours sleep out of each twenty-four. About the only discomfort was watching George's beard grow and wishing we would get it over with so he could shave."

Haldeman was no novice at long flights in a "Detroiter," for he piloted Ruth Elder almost to the Azores on her ocean flight.

The flying Stinsons' connection with aviation is almost as lengthy as that of the Wright brothers. Along about 1903 and 1904, when the Dayton bicycle men were making their first flights with power, a boy in knee pants, down in Mississippi, with the assistance of two sisters, was building glider-type kites. The trio were Eddie, Katy and Marge, who grew up to be, respectively, an airplane builder and a pair of famous women dare-devils.

By the year 1909, when the Wrights were winning their first world-wide recognition, the Stinson children were getting 200 and 300-foot flights in gliders big enough to carry them and attaining the

respectable altitude of ten to fifteen feet. It must be remembered that the Wrights did most of their power-airplane flying at that time around fifty feet above the ground and publicly announced they saw no reason for going higher.

Katherine went to Chicago in 1912 and learned to fly a Wright Model-B, a curious contraption that a spectator described as a rather flimsy front porch with a pilot sitting out on the steps. At the same time Eddie, who had reached the respectable age of seventeen, was building his own machine, with the help of a couple of garage mechanics, in St. Louis. There wasn't any suitable engine on the market, so they built that, too.

The finished product bore a close resemblance to the Wright, even to the pair of chain-driven pusher propellers in the rear. With it he did a lot of ground flying and learned to handle a plane perfectly up to the moment it reached flying speed and took to the air. Every time it got off the ground, however, the trip wound up in an accident, and the machine had to go into the shop for repairs. Finally it had been crashed and repaired so many times the builders ran out of places to put fresh patches and Eddie decided to go down to Dayton and enter the Wright school, an arrangement which had the advantage that the cost of tuition included all repairs. If the student cracked up the school ship, the singular being correct as, most of the time, the school had only one plane.

Stinson in the Plane, and the Mayor of Jacksonville Wishing Haldeman Good Luck before the Start of the Flight

Katherine already had become a famous state and county-fair attraction, and Marjorie went through the Wright school that same summer of 1914 and followed in her sister's footsteps, while Eddie went barnstorming, too.

The family had moved to San Antonio, and put that ancient Texas town on the flying map long before the army made it the greatest flying center in the country by establishing there Brooks and Kelly, the chief primary and finishing flying

schools during the war and since.

Eddie says the funniest experience in all his 14,000 hours happened at San Antonio while he was still in his teens. He was flying a Wright model, home-made, and, by permission of the commandant, was using the parade ground at Fort Sam Houston as a flying field. One day the commanding officer served notice he would have to move away, as the army was sending down four ships to establish the nucleus of an air corps at Ft. Sam Houston, and it wouldn't be safe for a kid in a forty-mile-an-hour Wright to be fooling around in the air when four fast "Jennies,"

ships capable of as much as eighty miles an hour, were in the same vicinity.

So the young flyer went out and located his first field, a level track south of town, borrowed a pair of sheets from his mother, staked them down to mark the spot, and returned to the fort to start his first cross-country flight, a journey of seven miles.

All went well the first half of the distance, and then, as he shoved the control stick forward to nose down and lose some altitude, nothing happened. He kept on

The New Fairchild "21," a Low-Wing Monoplane Designed as a Training Ship for Student Instruction, Is Typical of the Drift Away from the Biplanes of Recent Years

shoving until he had the stick all the way down to the cross-bar on which his feet rested, with the result that finally, perhaps because of the displacement of his weight, the home-made plane went into a dive.

Back came the stick until it was pressed tight against his chest, and again nothing happened. He squirmed sideways out of the seat and kept on pushing until the stick was where he had been sitting, and then the plane nosed up. At the same time he located the source of the trouble. A bolt which acted as a pivot for the elevator controls had sheared off, and instead of going up and down when the controls were moved, the elevators were

Typical Two-Passenger Coupe of the Air, and, Above, the Retractable Landing Gear of the Fokker Amphibian Pulling Up into the Stub Pontoon Wing

his new field, until finally his ship was not more than thirty feet from the ground.

Afraid to try another dive, he shut off the ignition and let the plane settle to the ground, making a landing in a corner of a cemetery without breaking anything. The sexton ran over to investigate, and Eddie explained he couldn't get out of the cemetery until he got a three-sixteenth-inch stove bolt to repair the

controls. The sexton thought one might be found, and together they rummaged through all the junk in his storeroom, without success. Finally the sexton inquired if the boy flyer was superstitious, and volunteered the information that one of the vaults contained an ancient iron-plate coffin, fairly studded with bolts.

By alternately shoving the stick all the way down and pulling it all the way back, he succeeded in descending in a series of short dives, all the time hoping to reach

Together they rolled back the stone

cover, inspected the coffin and found a bolt just the right size. Repairs were made, young Stinson took off and landed safely beside his mother's sheets at the new field.

It was on the same field that Marjorie won the title of the "Flying School Ma'm," when she opened an aviation school and became the first woman pilot to give flying lessons. She and Eddie together trained a large number of flyers for Canada before the United States went into the war, while their mother helped manage the business.

One of the queerest of flying incidents happened during that period.

"We had a student," Eddie says, "who didn't want to fly, and was afraid to fly. He was of army age, and if he had to go into the army, he had decided he wanted to be an officer, so joined up to get a flying commission. In private life, he had been a ribbon clerk, and if anyone ever looked and acted as you would expect a ribbon clerk to look and act, he did.

"We labored and labored over him, and finally one morning he made three fairly decent landings in succession, so I told him to go ahead and solo. To get his ticket, he had to take off, go up and do two figure eights, and come down and make a good landing within a certain distance from a mark.

"He made a perfect take-off, climbed to the right altitude, did a pair of as nice figure eights as anybody ever saw, circled out downwind, turned and came into the

field at just the right altitude, at the correct moment he cut the gun and nosed down in a gentle glide, leveled out just when he should, pulled the nose up as the plane lost speed, and was settling for a perfect three-point landing, with the plane hardly six inches off the ground, when he lost his head and jumped overboard.

"The ship landed and rolled along to a stop, while the student was nearly killed from the head-first impact at thirty miles an hour."

With the entrance of America into the war, Stinson was commissioned, and immediately assigned as an instructor to Kelly field. There he stayed, for there were plenty of students to send to France, but good instructors were rare. As "final check" pilot at Kelly, no student could graduate until he had a certain number of minutes in the air with Stinson and received his O. K.

At Kelly, Stinson became famous for two things: his stunts with a ship of his own design, and his ability to break light globes with a wing tip, the last of which proved a remunerative occupation, as there was always a certain number of people willing to bet it couldn't be done.

Every structure around a flying field is marked with a red warning light, one of the most prominent being the light atop the flagpole. Eddie's usual bet was \$100 that he could fly over the flagpole and gauge the distance so accurately that he could crack the glass globe off by brushing it with a wing tip, without damaging

The Twin-Motored Sikorsky Amphibian, a Luxurious Aerial Yacht; When Its Wheels Are Lowered, It Can Land on Any Fair-Sized Field, or Draw Them Up and Alight on Water

Looking Forward in the Cabin of the Sikorsky Amphibian; the Two Pilots Are in a Separate Compartment, and the Kitchenette and Lavatory Are at the Rear of the Ship

his ship. As a collision with the flagpole at a flying speed of eighty miles an hour or more would be fatal to both ship and pole, there were frequent takers of the bet, but they invariably lost.

His little homemade monoplane handled so perfectly that one of Stinson's favorite stunts was to climb the side of the field water tank, drop across the top and go down the other side until the ship picked up flying speed. To do the trick he flew straight at the water tank, with his wheels just off the ground, pulled the stick back just before a crash seemed unavoidable, zoomed the ship up the side of the tank until it lost flying speed just above the top, shoved the stick down and flipped over the top, then down the opposite side until he got speed, when he would pull the ship up and level out again.

What his 14,000 hours of flying represents can be visualized by reducing it to mileage. Forty to forty-five miles was top speed in the early days, but 150 and better is common now, so it is safe to say he has averaged better than 100 miles an hour over the 14,000 hours. At that rate, his 1,400,000 miles represents three round trips to the moon and back, which is a respectable lot of miles.

BLOOD MADE WITH CHEMICALS TO HELP GAS VICTIMS 2148

One of the iron substances found in the blood has been prepared synthetically by a German chemist, according to reports. It is expected that the discovery will be useful in cases of gas poisoning, although at present blood transfusion is cheaper.

Indians at "Hooligan" Fishing Time; These Fat Little Fish Yield Oil That Serves as Lard or as Substitute for Ice Cream

In the Pacific coast region, nature was generous in supplying the aborigines with food resources. Many of the primitive industries still exist. They are quaint, picturesque, and are conducted along the simplest lines. One of the most romantic and colorful of these is the harvest of the eulachon, or "Hooligan" fish, by the natives of southeastern Alaska. Picture a river of purest azure, a glacial stream winding through a valley heavily timbered with spruce and fir, above the tops of which snow-capped mountains tower majestically. On the bank of the river, Indians, clad in nondescript but picturesque garb, toil or play in the hot sunshine of the short Alaska summer, the men sweeping the waters of the stream with crude dipnets and the women scurrying up the bank with baskets filled with gleaming fish. The eulachon is said to be the fattest of all fishes, and both the meat and the oil rendered from it have a

peculiarly delicate, agreeable flavor. In the early days of Alaska gold discovery the eulachon was used for purposes of illumination by the miners, who called it the candlefish. It may be dried, thrust in the neck of a bottle, and burned like a candle. The Alaska Indian likes the oil of the eulachon better than other fish oils, and the flesh is sometimes eaten dried and smoked. The Canadian government purchases much of the oil for its Eskimo wards in the far Arctic. It is considered an excellent substitute for lard. One of the favorite dishes among the coast Indians is prepared from eulachon oil and is a native substitute for ice cream.

The Man Standing in the Dipper Gives Some Idea of the Enormous Size of This Shovel

Courtesy General Electric Co.

MAMMOTH SHOVEL BEING BUILT TO BREAK ALL RECORDS

Spurred by the success of several twelve-cubic-yard-capacity electric excavating shovels put in operation last year, a fifteen-yard unit is nearing completion, to be the largest in the world. Some idea of what a fifteen-cubic-yard shovel means may be gathered from the fact that the dipper will bite out eight large motor-truck loads of material at a single gulp, or enough earth to fill a trench six feet wide, sixty-eight feet long and a foot deep. The machine will have a boom 120 feet long and a dipper stick of eighty feet. A single man, with one set of hand levers and one set of pedals, will control every operation of the giant, according to the General Electric company, which is building the motor equipment. Power will come to the shovel through a trailing cable nearly three inches in diameter and about a thousand feet long, which will be wound on a reel at the rear.

PLANE RESCUES INJURED NUN IN ALASKA

Winging his way northward over Alaska, an aviator went to the rescue of an injured nun at the St. Peter Claver mission in Nulato recently. She was carried 400 miles in the plane to Fairbanks, where surgeons set her broken leg. The Rev. Father Joseph F. McElmeel, priest at the station, heard the faint whir of the airplane. He hurried to the post office, secured the aid of the signaling agent there, and in a few moments, the plane had landed and arrangements were made for taking the suffering nun to Fairbanks the next morning.

SPRING-MOTORED TOOTHBRUSH FOR POCKET

Giving the toothbrush a rotary instead of a sideways movement is recommended by dentists, and this is the natural action of a revolving brush now on the market. It has a small motor which causes the brush to spin rapidly when a tiny handle is pushed. The entire outfit can be carried in the pocket, is

Operating the Rotary Toothbrush; a Spring Motor Spins the Shaft and Buffer at Rapid Rate

easily kept clean and is said to be beneficial to the teeth and to the gums.

Dr. C. J. Hedley-Thornton Examining Some Samples of "Artificial" Cotton in Various Stages of Treatment; a Bird's Nest Led to the Accidental Discovery of the Plant

A SUBSTITUTE for cotton, discovered by accident in a Central American bird's nest, has quietly been put in production in England, and, with its recent announcement, it was stated that a sufficiency could be grown within another two years to fill fifteen per cent of the world's demand for cotton cloth and cotton products.

The new fiber comes from a weed, found growing wild in British Guiana. Dr. C. J. Hedley-Thornton, of London, an expert in the study of cotton pests, particularly the boll weevil, was in Guiana with a party of scientists when they discovered a bird's nest, apparently made from cotton. As no known cotton supplies were within reach of the bird, they watched, and eventually traced the nest builder to a weed from which it obtained the building material. They found nine different varieties of this weed, all very similar, but only one variety yielded the cottonlike fiber selected by the bird.

Samples of the plant were taken to England and cultivation attempted. De-

spite the change of climate, the weed thrived, and, by careful crossing and re-crossing of selected specimens, in a few years' time began yielding plants five to seven feet high, with a far superior output of fiber. The plants grew well in even poor soil, and, so far, no insect pest has been found to attack them. Considerable areas in Sussex and Essex have been under cultivation for some time, with an average yield of 800 pounds to the acre, the acre yield being valued at \$100.

Cloth made from the fiber has been distributed, without even experts detecting the fact that it did not come from a genuine cotton plant. Before going to the mills, the fiber is chemically treated, but from then on the process of converting it into usual cotton-product forms does not vary from existing methods. It is readily mixed with silk, artificial silk or wool to produce blended fabrics, and is bleached, printed and dyed in the usual manner. The cloth, it is claimed, has a higher sheen than ordinary cotton, so

much so that a blend of ten per cent artificial silk and ninety per cent of the new cotton makes a satisfactory silk substitute. The makers claim it takes color much more easily than ordinary cotton, and requires only about one-third as much coloring matter for dyeing.

Instead of picking the fiber in the field, the plants are reaped by machinery and sent to the mills for separation. It is impossible to grow new plants from seed, as they will revert to the wild characteristics. Instead, the roots are dug, the old root having decayed and left three fresh offshoots. As a result, after each acre's crop has been dug, there are sufficient new roots to plant three acres the following year.

After the fiber is removed from the plants, the leaves can be salvaged and made into serviceable paper and the stalks into building board. Excess roots also can be utilized through the extraction of a new drug.

The progress of the development is being watched with interest in England, not

only because the crop may be grown with profit on poor waste land, but because its cheapness promises to revive the cotton-spinning industry, which has suffered considerably in recent years. Neither American nor Egyptian cotton, it is claimed, can be laid down at the Lancashire mills at prices which will enable them to compete with the new product.

Chemical and structural tests of the cloth woven from the weed fiber indicate it is stronger than cotton, and also more elastic. So far, it has only been woven in the coarser grades.

Doctor Hedley-Thornton anticipates no difficulty in weaving fine cloths comparable with the best cotton fabrics, and the Lancashire mills are experimenting with the fiber preparatory to attempting to invade the entire cotton field. With the production in the hands of one company a price of 12½ cents a pound has been put on the fiber.

Drawing of the Automobile Toll Bridge That Will Connect Oregon and Washington; It Is to Cost Nearly \$6,000,000 and Will Be More Than a Mile and a Half Long

LONG TOLL BRIDGE FOR AUTOS TO LINK TWO STATES

Another impressive bridge construction is under way on the Pacific coast, where a steel link is being thrown across the Columbia river to connect Longview, Wash., with Rainier, Oreg. The bridge will have a clear height of 195 feet, amply sufficient to allow tall-masted vessels to pass beneath; will be more than a mile and a half long, and will cost approximately \$5,800,000. More than 13,000 tons of steel will be required. It will be operated on a toll basis. More than 600,000 vehicles will use it during the first year it is completed, engineers estimate. Work is to be finished about Feb. 1, 1930.

FOUR THOUSAND AIR ENGINES DOOMED TO BE JUNKED

Four thousand Liberty engines, brand-new and still in the original crates, are doomed as junk, as a result of the action of the house of representatives in placing an official ban on their use in new airplanes ordered by the army. Ten years ago the Liberty engine was the finest aircraft motor in the world, but engine building has progressed so far in the years since the war that the big twelve-cylinder Liberty is now branded a menace to aviators, besides being uneconomical to use. Congressman LaGuardia, of New York, a wartime flyer, was responsible for the decision to replace the surplus engines with more modern motors. He cited figures from

General Fechet, chief of the army air service, to show that Liberty engines were three times as dangerous as the modern Wright "Whirlwinds" and "Cyclones," Curtiss "D-12's" and Pratt and Whitney "Wasps" and "Hornets." LaGuardia recommended that none of the engines be sold for use in civilian planes, and that they be converted into scrap. Some reconditioned Liberties have been sold for use in fast motorboats.

ROUGH ROLLER FOR HARD ROADS TO STOP SKIDDING

On some of the hard roads about Berlin, a specially constructed roller is applied to roughen the surface and thus reduce the likelihood of automobiles skidding. The plan in effect gives a tread to the road without damaging the material or causing discomfort in riding.

It shows luxuries and conveniences commonly associated with country clubs, and similar places, and also has small replicas of most of the latest safety devices developed for aviation fields.

BOULDER DAM UP TO STATES BORDERING ON RIVER

With the passage of the Boulder dam bill by congress and its signing by President Coolidge, the greatest flood-control, irrigation and power-development scheme in American history is now up to the states bordering on the lower Colorado river, waiting for their acceptance of the

terms. Under the bill, the government is to advance \$165,000,000 to start the project, with the idea that the money eventually will be repaid out of power profits. If the states accept the terms and the dam is built, it will be the highest on the continent, taller than the Washington monument; will impound a mass of water sufficient to cover five New England states to a depth of one foot, and will stop the river from carrying down to the sea each year enough silt to fill the whole channel of the Panama canal. While the primary purpose behind the scheme is flood relief—to prevent the river from overflowing the immensely rich Imperial valley, a truck garden that once was the bottom of the sea and is now below the river level—the power developed is expected to pay for the work. As a side line, a hotel and resort may be

developed on the west bank above the dam, from where boats can travel up to the Grand canyon. The site is not far from Las Vegas, a desert stop on the Los Angeles-Salt Lake air-mail and passenger line.

CHAIN LOCK RELEASES GAS TO FOIL THIEVES

Fumes of penetrating gas are contained within the chain of a lock that an eastern inventor has introduced to discourage thieves. Should the chain be cut, broken or otherwise tampered with, the gas is released and is intended to overcome anyone who is attempting to force an entrance without a key.

PREDICT VOLCANO ERUPTIONS BY STUDY OF AVERAGES

When Dr. Thomas A. Jaggar, director of the Hawaiian volcano observatory, predicted, the other day, that there will be an eruption of either Kilauea or Mauna Loa this year, scientists paid attention, for his prophecies with regard to the action of volcanoes have been fulfilled with remarkable consistency in the past. "A volcano is not a clock," he explained. "The interval theory is based on averages and the averages are based on certain laws of nature such as those that determine the space intervals of ripple marks in the sands of the sea or the time intervals when they break rhythmically on the beach. The lava under a volcano has been pressing upward for ages through a crack

of certain size. It has blocked or impeded that crack with its own heap of lava and so has forced itself to adopt a rhythm or interval like the puffs from a steam engine. If it has several vents, these divide responsibility for the interval, and if one vent is low and close to the water table, while the other is high and far above the ground water on the island, the probability of explosion is greater for the lower vent. This is because a sudden drop in the lower vent may place the lava column below the water table and so develop a steam chamber. This is the situation of Kilauea as compared with Mauna Loa." Doctor Jaggar predicted in 1912 that Mauna Loa would become active before 1915. It broke out in 1914. In 1920 both Kilauea and Mauna Loa erupted, according to predictions he made in 1917.

WOOD FIBER FOR MILK BOTTLES REPLACES GLASS

Lightweight bottles of paraffin-treated spruce fiber have been introduced as milk containers in place of the ordinary ones of glass. They eliminate the clatter, are easily opened and are tightly sealed when filled, to keep out dirt and to prevent tampering. Two of the cone-shaped holders,

Filling the Paper Bottles, and Comparison of the Weight of Two with One Glass Bottle, All Filled

filled with milk, weighed but seven ounces more than a full glass quart bottle.

The Bug Boarding House

THE FANTASTIC sight of two chickens, each one clad in what actually looked like a nightshirt, careening about on a farmhouse lawn, was afforded two automobilists in the rural district of Vienna, Va., a short time ago.

"What does that prove?" exclaimed the astonished driver as he shut off his motor and took a closer view of the scurrying hens.

The answer, given by W. S. Abbott, was that they were now on the premises of what is probably a unique research farm in the country. Known variously as the "Bug Boarding House," "The Crawler Factory" and "The Insect Zoo," the establishment is used for the purpose of testing out all manner of chemical mixtures purported to rid the nation's households, gardens and farms of bothersome and destructive insect pests.

"Doctor" Abbott, as he is known, is the landlord of the boarding house, and he has been on the same job for about twelve years, his official title being entomologist, or insect specialist. Assisting him are three other entomologists, and the government has established a somewhat smaller bug farm at Lake Alfred, Fla., near Orlando, the idea being to study the southern insects, notably those that prey upon citrus fruits. In addition, the food, drug and insecticide administration, which supervises all the work, maintains some thirty collectors whose duty it is to tour the country in search of samples of insecticides to be turned in for investigation.

Far-fetched as the bug farm's nicknames may sound, they are not so much so when you come to examine the reasons for their origin. Certainly the place is an insect-boarding house, for there are apartment houses and a regular bill of fare for cockroaches: a two-story palace devoted exclusively to the fussy wants of clothes moths and carpet beetles, and, besides, two entire greenhouses filled with choice plants that offer the richest kind of desserts for the most discriminating outdoor moguls of bugdom.

As for being a "Crawler Factory," that term, too, is not so far from the truth. There's hardly an insect that a person could name off-hand that isn't to be found, and if it so happens that the supply of roaches, moths, fleas, lice, and so on, runs low, the experts practice the simple expedient of supplying such appetizing fare that in an amazingly short time, may be only a few days, the situation becomes normal.

Then again, the name "Insect Zoo"

An "Apartment House" for Cockroaches in the Government Experimental Laboratory, Where All Kinds of Insects Are Studied

Testing Out Insect Eradicators in One of the Greenhouses of the Laboratory Where Pest Extermination Is Studied

comes pretty close to the real facts in the case. Whereas, in an animal zoological park, the monkey frolics about a tree while the duck cavorts in a pond, a similar situation prevails among the bug-farm inhabitants. Within its exclusive mansion, the cockroach may play hide and seek among the cracker boxes and refuse of various kinds that simulate almost exactly the conditions in its natural habitat; the hungry clothes moth, surrounded by a goodly supply of raw wool and woolen cloths, has far better quarters than he would have normally, and the rest of the bug family are treated with like consideration. For instance, the itinerant animal parasites, such as those fleas and lice that gnaw on dogs, cats and chickens, are bred in substantial numbers by the simple process of letting them roam around at will on the haunches of animals raised especially for the purpose.

Those two staggering hens with the "nightshirts" on were taking part in a curious test. The experts had followed out literally the directions of a lice cure, which recommended that cheesecloths, that previously had been dipped with a

certain kind of chemical mixture, be wrapped around the hens. It killed the lice, sure enough, and killed a lot of chickens, too. Almost equally tragic results, though of a somewhat different sort, have come about occasionally during experiments concerning the lowly bedbug. There was a time when the wee crawlers were bred in the bug-boarding house on a rather large scale. Not so today, however, and possibly such happenings as the following may serve to explain why. It seems that bed cooties can live on many kinds of animals, notably white rats, or so the experts believed in the early days. Therefore, in order to encourage their development,

the seemingly clever idea was hit upon to build up a sizable partnership between the bugs and rats.

All went well for a while. But soon the scientists were taxing their brains to solve the strangest mystery of many a day. The bedbugs were disappearing fast and no legitimate reason presented itself until one alert expert noticed to his astonishment that, instead of the crawlers thriving on the white mice, the latter beasties were chewing away steadily on their erstwhile biters. This sort of thing couldn't go on. So the practice of trying to breed the bedbugs stopped, and the fact was made known officially that Uncle Sam hereafter would buy them at the modest price of a penny apiece. Yet there weren't any too many bug hunters willing to sacrifice time and energy for that sum. Whereupon the price jumped up to a copper and a half. Even then the situation was hardly as it should be, although there actually were a few people of extra-fine eyesight who not only claimed they could supply 2,000 bugs upon twenty-four hours' notice, but were able to make good on the boast.

This bedbug story, however, had an unexpected ending. Doctor Abbott one day mentioned, in a Washington barber shop, that the government was in the market for a supply of the bugs at a cent and a half apiece. A stranger standing by offered to assist in getting the collection started, but his assistance took the form of passing the story on to a newspaper reporter, who wrote a highly interesting account of Uncle Sam's offer to pay for the pests. Papers throughout the country reprinted the yarn, sometimes adding embellishments of their own, with the result that large shipments began to arrive from all quarters of the country. It was necessary to get out a special form letter assuring aspiring dealers that the government did not need any more insects and would gladly return those already sent, provided the shipper sent return postage.

Not all the martyrs to science get their names in the daily press. It is all in the day's work for an insect inves-

tigator on the bug farm to be called upon, of a summer's evening, to go out in the swampy woods where mosquitoes are thickest and "park" there for hours, meantime letting the stinging insects try their luck both on an arm that has been treated with a so-called mosquito-proof lotion and on one that has no such protective substance on it. Unhappily, this procedure

has to be carried out because it is one of the best ways to test the efficacy of many much advertised commercial remedies. The idea is to compare the number of bites received on each arm.

Gas masks are common enough in mines. But who ever heard of using such protective coverings for "shooting" cats and dogs with flea and lice remedies? Nevertheless there are frequent occasions when the bug experts must put on a funny-looking mask, known as an "aspirator," that fits over the nose and mouth. Without it, they would be more than likely to get their nose and throat so filled with strong chemicals that very soon they would manifest all the symptoms of the

Trying Out Flea Cures on a Cat and Dog, and, Center, a Plant Ravished by Aphids About to Be Sprayed

Chickens Wear "Nightshirts" in a Test in Which the Garment Is Saturated with an Advertised "Remedy"

true possessor of hay fever. It seems rather a shame that no such contraption has been devised for the use of the animals that must undergo the tests, but thus far there has been none that has entered the situation seriously.

The dog shown with "Doc" Abbott in the picture, is only a mongrel. But its service to science during its five-year stay with Uncle Sam has been important. Sad-eyed and quiet, it has figured in all sorts of tests. In one of the very latest, it was adorned liberally with fleas, wrapped carefully within a piece of sacking and then put into a box sprayed with a new kind of flea cure. Only the faithful dog's head was left sticking out and it presented an exceedingly sorry picture. However, it bore the ordeal with bravery and earned further high rank as a star boarder in the bug house. In this regard the cat family is far more "persnickety" than are the dogs. Five kitties are kept at the farm to be covered now and again with sundry fleas and lice closely related to the dog varieties. But, as every one knows, cats bitterly resent having any kind of liquid poured on them; which explains why only

the powders are used ordinarily. Even these are not welcomed.

Lice aren't by any means confined to animals. Plants have them, too, and in great abundance, variety and in most colors of the rainbow. Known as aphids, the size of these strange insects also varies widely, some being so tiny as to be barely distinguishable to the naked eye, and others up to about an eighth of an inch long. Though most aphids are green, the color seems to depend mainly on that of the particular plant on which they live.

One of the most novel of the recent experiments at the bug-boarding house was designed to test the effect of a substance, to be taken internally, which would not only rid chickens of lice, but, in case the said poultry were gobbled up by hawks or owls, would likewise kill these animals. The experts gathered a few of these last and fed a couple of chickens to them after the latter had imbibed of the magical powder. But something revolutionary must have happened to the "remedy," for the hawks and owls seemed to thrive on their unusual fare even when the powder dose was increased up to eight times the amount called for.

BOAT FOR SHALLOW WATERS HAS "STEPS" ON KEEL

Weighing slightly more than 180 pounds, an outboard-motor boat introduced in England, will run on water but three inches deep when it is empty. The keel is arranged with overlapping members and the sides are built in the same manner to decrease resistance from the water when the craft is going forward. It will hold several persons.

Model of a Working Grain Elevator on the Chicago River, and, Inset, the Car-Loading and Unloading Side, with Railroad Sidings

MODEL ELEVATOR LOADS CARS AND LAKE STEAMSHIPS

The millions of bushels of grain which each year pass through the control of the world's greatest grain market, the Chicago Board of Trade, require a vast amount of handling machinery to permit weighing, checking and speedy shipment. The huge grain elevators can load or unload either railroad cars or lake steamships at the same time, and weigh every bushel of grain that goes in or out of the bins, all in one operation. One of the sights of the weighmaster's office is a scale model of an elevator, rail car and steamship, cut away to show actual operation. Grain can be run into and out of the bins, and to and from the car or steamer holds, and accurately weighed as it passes. The unloading of railroad cars is accomplished on a dumping track, similar to those used to empty coal cars. The Board of Trade differs from stock ex-

changes in one important particular, for, while stock brokers may never see the actual shares they buy and sell, a sample of every car of grain entering the Chicago market goes to the trading floor for examination. Both

Board of Trade and state inspectors pass on the grading and insure the genuineness of the sample as representative of the lot.

MOTORCYCLE RUN BY ROCKETS SHOWN AT EXHIBITION

One of the interesting displays at a recent motor exhibition in Germany was a rocket motorcycle. For the first time, the general public had an opportunity to examine this unit closely. The cycle has passed several successful tests.

ZOO GOATS' MODEL MOUNTAIN KEEPS ANIMALS IN TRIM

Goats in the San Diego Zoo on Top of Their Artificial-Mountain Playground Erected in Pen

To give mountain goats the exercise they need, an artificial cliff has been erected in the animals' pen at the Balboa park zoo in San Diego, Calif. A spiral runway leads to the top of the crag, and there are projections to which the animals may jump. The goats enjoy the climbing and their nimbleness attracts visitors.

SOLVE RADIO MYSTERY 2093

While stirring beans on her electrical stove, a California woman was mystified at hearing the strains of three musical selections coming from under the pan. The phenomenon remained a mystery until investigation led to the following explanation: The music was picked up by induction from a telephone wire by the current circuit that supplied the range. It was then fed to the metal resistances in the stove where the audio vibrations were loaded upon the heat vibrations

which carried them to the thin metal disk of the pan. The stirring caused the musical vibrations to come up from under the beans. It would have been possible, in the opinion of engineers, for the hot air alone to have reproduced the music.

LIGHT RAYS CONTROL TRAIN TO PREVENT WRECKS

German engineers are testing a light-ray safety-control system for railroads. A selenium cell is an important unit in the apparatus and along the right of way are mirrors, of special construction and said to be reliable under all weather conditions. Rays emanating from the locomotive cab strike the mirrors as the train proceeds. If there is danger ahead or the next block is closed, the rays affect the selenium cell in such a way that an electric circuit is closed and the train's brakes are automatically applied. The train is brought to a stop gradually by varying the distance between the mirrors. The system has been recommended for installation at curves and other places where slower speeds are in keeping with greater safety.

PUNCHING BAG WORN ON HEAD AIDS SHADOW BOXER 2048

As a substitute for the regulation punching bag, a rubber sphere, attached to a headband by rubber cords, and worn in front where it can be struck by the fists, has appeared on the market. It is said to afford healthful exercise, gives practice in shadow boxing and is noiseless. Should the user miss the ball, he would suffer no injury as the sphere is of light weight.

ALL-STREAMLINE PLANE FLIES AT GREAT SPEED

Interesting Views of the Stream-line Plane Built for Fast Speed and Greater Comfort; Note the Guards about Landing Wheels

Absence of struts, unusual development of streamline design and the low position of the wing are special features of a monoplane built by a western engineer. It has flown at 200 miles an hour with its single motor and has climbed to a height of 1,000 feet within the first minute after leaving the ground, according to reports. Landings at forty miles an hour are made. The fuselage and wing are covered with plywood. The plane has a wing spread of thirty-five feet.

"COLDEST SPOT IN THE WORLD" FOUND AT HELIUM PLANT

Near Amarillo, Tex., the bureau of mines is constructing a plant for obtaining helium from natural gas and when it is in operation, it will be one of the world's coldest places. Three hundred degrees below zero will be the normal "weather" in this laboratory, for at that point other substances than helium in the gas are liquefied and can be drawn off, leaving the helium, which is carefully saved and bot-

tled for use in inflating airships. Under such cold, air is also liquefied, carbon dioxide becomes solid, lead and copper take on the properties of steel, and rubber becomes as brittle as glass. An icicle, thrust into the gas at such a temperature, would produce about the same effect as when a hot poker is immersed in water. Improved manufacturing processes are reducing the cost of helium to but a fraction of what it was when the gas was first employed for aeronautical purposes.

Names and addresses of manufacturers of articles described in this magazine will be promptly furnished, free, by our Bureau of Information.

Drawing to Show How Stilts Were Installed in Building and Addition Erected on Top of Them

ADD STILTS TO OLD BUILDING FOR EXTRA STORIES

Although it was not constructed for adding more floors, an office building in New York city was raised six stories recently by a skillful engineering plan. This involved erecting eight columns, 175 feet tall, inside of the old building, to support the addition. The work was accomplished without disturbing tenants and was finished within six months.

NEW VISUAL THEORY OFFERED BY SIR OLIVER LODGE

How do we see? The phenomenon of vision is given a different explanation by Sir Oliver Lodge who witnessed a series of tests showing the effect of electric shocks on the nervous system. He suggested that radiation alone is not the

whole cause of vision but that the retina of the eye possibly contains something which ejects electrons and these act as projectors to stimulate the nerves. This stimulation from the electrons, rather than the impact of the light waves, Sir Oliver holds, may cause vision. His explanation was inspired by the fact that some high-frequency electric currents could not be felt when applied to the body of the subject in the test, but did produce an effect on the nervous system.

PRINTER'S ERROR ADDS VALUE TO POSTAGE STAMP

Mistakes usually are costly but they may mean small fortunes to stamp collectors. An illustration is furnished from France. Recently, a government printer carelessly tore a roll of blank paper on which the stamps were to be printed. He mended it with a strip of red paper. When the stamps, which were printed in green, were finished, ten of them appeared on a red background. They are already highly valued by collectors and doubtless will increase in price.

WATER KEPT FROM GASOLINE BY SAFETY VALVE

To prevent pumping water into the automobile gasoline tanks from filling stations, a special valve has been devised to fit on the end of the suction line inside the station tank. Its essential feature is a float which sinks in gasoline but rests on water and locks the pump before water at the bottom of the tank can be drawn into the customer's auto. The station attendant can quickly pump out the water in the tank, thus allowing the float in the suction-line valve to fall back and unlock the gasoline pump. Rust, dirt and scale in the bottom of the tank are also excluded by the valve, which is made of bronze.

Swift Lubricator Co

WHERE LATEST DESIGNS IN PLANES ARE TESTED

Views in the Plane-Testing Laboratory at Langley Field; the Huge Wind Tunnel, One of the Planes Tested and the Large Fan

Unusual experiments that will have a far-reaching effect on airplane design are being conducted at Langley field, Va. The air resistance of the increasingly popular radial air-cooled aviation motor, which now is one of the most serious drawbacks of this type of airplane power plant, is reduced by more than thirty per cent by a radical change in streamlining the cowling, which diverts the propeller slip stream around the motor and yet does not interfere with the cooling. The in-

crease in efficiency resulting from this change is said to be the most valuable aviation improvement since the World War. Wind-tunnel investigations have revealed that twenty-five horsepower is lost in overcoming the wind resistance offered by the motor, without streamlining. Therefore, the new cowling increases the effective horsepower of the plane by approximately eight horsepower. The saving, in the case of a 200-horsepower motor, for example, amounts to

Laboratory National Advisory

three gallons of gasoline to the hour of flight. The new cowling device, which resembles a large bowl with the bottom knocked out to make room for the propeller shaft, is placed over the engine. It is the first result of a cowling and cooling investigation undertaken in the new \$150,000 propeller-research tunnel.

ROLLER SKATES SPEED PHONES IN EARLY HOURS

Telephone Girls in Los Angeles Exchange Wearing Roller Skates to Save Time in Answering Calls

Young women on duty in the early morning hours at a Los Angeles telephone exchange, wear roller skates to speed them in moving to different positions at the boards. The plan is reported to have been successful, as it saves time when only a few attendants are at work.

ANCIENT BURIAL PIT REVEALS ROYAL SPLendor

Splendors of a royal court that flourished 5,000 years ago have been unearthed in the cemetery of Ur of the Chaldees, where the bodies of forty-five sacrificial victims, thirty-nine of them women, have been found by excavators. The discovery revealed an amazing display. There were gold hair ribbons, wreaths of gold leaves

and flowers, glaid pendants, large ear rings, combs with flowers of colored inlay, pins and necklaces of gold. Among other objects were three harps, one adorned with the golden head of a bull, and the statues of a pair of rams, their heads and legs of gold, the horns and hair of lapis lazuli and the fleece of white shell. The statues have sockets which indicate that they once were the support of some article of furniture or ornament that long since has disappeared. After the bodies of the sacrificial victims had been placed in the pit, earth had been heaped on them and tamped down, while other possessions, servants and live stock were buried to complete the ceremony.

MAGIC EFFECT OF COLOR KEEPS STEEL COOL

That color may be employed indirectly to increase the strength of some structures is the interesting conclusion suggested by a series of experiments by an English authority. He has found that a certain shade of blue diminishes the effect of the sun's rays on steel and preserves a more even temperature. Since extreme heating and cooling may tend to weaken a structure, under certain conditions, the proper color might insure longer life and greater strength. Physicians long have recognized the importance of the right color in hospitals and sick rooms and in the home, the use of color in decorations being studied more carefully.

SPRING CLIP FOR VALVE TAPPET ELIMINATES NOISE

To stop tappet noises in cars which have developed that trouble, a spring-steel unit is inserted between the valve stem and the tappet head. Once in place, it holds the tappet in constant engagement with the camshaft and can be installed in a few minutes.

Polar Bear Performs for the "Talkies"; the Recording Apparatus Was Placed at the Open Door of the Bear's Cage While the "Mike" Was Held near the Screen

POLAR BEAR IN TALKING MOVIES PROVES GOOD "ACTOR"

To obtain "talking" moving pictures of a polar bear at the zoo in Oakland, Calif., photographers placed their machines close to the animal's cage and then opened the door so they could film close-ups of the inmate. The bear seemed to enjoy its brief experience as an "actor," jumping in and out of its pool and giving a few roars and grunts which were recorded for the talkies.

MOON LIKE VOLCANIC ASHES TEMPERATURES SHOW

No one knows for sure of what the moon is made, but temperature tests during the last eclipse indicate that it is composed of a porous substance possibly not unlike the volcanic ashes common in various parts of our earth. Scientists are quite certain that the moon is not like solid rock in structure. Drs. Edison Pettit and S. B. Nicholson, of the Mt. Wilson observatory, made careful measurements of the cooling of the moon as it went into the earth's shadow. Similar measurements were made in a laboratory as to the cooling of substances such as granite, ba-

salt and quartz. The material that cooled in a manner most like that of the moon was pumice, a porous stone of volcanic origin. The tests further substantiate the theory that the craters on the moon were caused by volcanoes.

PAPER-COVERED FOOTRESTS AID SHOE-STORE CUSTOMERS

One of the latest conveniences for the shoe store is a footrest with a reel of paper that is unwound as needed to provide a fresh, clean surface for the patron's stockinged feet. The reel carries sufficient paper for many days, and the stool is of such shape and size as to be handy and comfortable.

FORECAST INVASIONS OF PESTS TO PROTECT CROPS

Predictions of insect-pest invasions may be broadcast like the weather forecasts, if plans being developed by Roy Melvin, at the Iowa State college, materialize. By careful observation of the temperatures during the winter, measurements of the amount of oxygen consumed by the eggs and larvæ of insects in the cold season and comparing these factors, he has worked out a method of calculating the percentage of insects likely to survive the winter. Last year his forecasts on the abundance of corn borers were verified later in the season.

AUTOMATIC FOCUSING POSSIBLE FOR HOME-MOVIE CAMERAS

A device which makes it as easy to keep a movie camera, or any type of ordinary film or plate camera, in accurate focus on a moving object as it is to do it with a focal-plane shutter camera, is now available for amateur photographers. It consists of a fast lens and shutter, fixed in a micrometer mount and focusing on a prism, on which the picture can be seen through a magnifying eyepiece which enlarges it about ten times. A train of gears can be added to automatically keep the camera lens in the same focus or, for slower work, the device can be focused, the exact distance to the object read from a scale, and the camera lens focused to the

same point. A micrometer adjustment permits movement of the prism toward or away from the lens, so that it is possible to match the exact distance between the camera lens and the film plane, and then use it to

check other lenses to the camera, as the lens of the device is easily removed to set other lenses, such as a telephoto, in its place for accurate focusing.

Reindeer were imported to America as early as 1892.

Inner Solid Wheel Resting on Block, Shows How Bus Is Supported if Outer Tire Is Punctured

SAFETY WHEELS FOR MOTOR BUS AID IN-BLOW-OUTS

Small emergency wheels with solid tires are attached inside the regular wheels on motor busses of a western line. Should the tires blow out, the smaller wheels would support the load until the bus could be halted and repairs made, thus reducing the likelihood of overturning on curves or while running at high speed. The wheels can be attached in a few moments.

A CORRECTION

In an article on "Women of the Air" in the January issue reference was made to Glenn Curtiss as the inventor of the aileron, thereby doing an unintentional injustice to Dr. William W. Christmas, of New York, who was the first man, after the Wright brothers, to fly a plane, and who invented the form of aileron now universally used, as a movable section of the main wing. The error was due to a mistaken understanding that the Curtiss plane, with interplane flaps, which he flew on June 26, 1909, was the first practical ship to get away from the Wright system of wing warping. A search of the records since discloses that Doctor Christmas used ailerons on a plane which he flew March 8, 1908, and that these ailerons closely resembled the modern article, the patent on which he sold to the United States government.

Easy Handkerchief Tricks

by

Sam Brown,

1510 Broadway, N.Y.

Director of the

I KNOW, Amos; most people think that handkerchiefs have no other business than noses, but listen.

The performer collects all the handkerchiefs present. We'll say there are four. He drops them into his hat. He shakes them up. Then comes the trick. Without even as much as a single glance, the

performer removes each person's "hanky" as he calls for it.

Isn't that a lot more mysterious than noses? And it's dead easy. The first handkerchief is gripped through the felt; the second one is pushed up under the lining; the third is the performer's own, rolled into a compact little ball so as to be

The Stretched Handkerchief Makes Big Ones Out of Little Ones, and, Top, Any Owner Can Get His Property Returned from the Hat without the Performer Even Looking at It

distinguishable from the others; the fourth is simply dropped in. Well, with a layout like that, all the performer need do is remember which hanky is which and distribute them accordingly.

"Rudy" Kipling tells us how the elephant got his trunk, but he gives no recipe for making big handkerchiefs out of little ones. Allow me.

The performer borrows a handkerchief. Remarking that it seems a bit small, he twists it tightly—rope fashion—between his hands. In full view, the little hanky stretches out and becomes a full-sized handkerchief for the benefit of an amused audience.

It's done like this: The handkerchief is first taken by the extreme ends between finger and thumb of either hand. It is held slack. The performer then twists it up

into a rope, and under cover of the rapid movement, the hands are for a moment turned backs downward, so that the handkerchief lies across the hands. The little fingers at once curl inward, as shown, and the hands are again turned backs upward. And what have you? The handkerchief now lies with a doubled-up portion of the ends concealed in either hand, although its appearance is much the same as it was before.

To stretch the handkerchief, the twisting is carried on, and during

Two Stages of the Stretched-Handkerchief Trick, at the Top, and, Bottom, Trying to Burn a Bit of Fireproofed Linen

163

magician. He previously soaks his handkerchief in a concentrated solution of borax and water. Such a hanky appears much the same as every other with the exception that it is quite some little salamander, and

The Reef Knot, an Interesting Illusion Which Can Be Performed with a Borrowed Muffler; the Drawings Show Various Stages in the Tying of the Apparently Intricate Knot, Which Then Dissolves at a Tug

the twisting the spare part of the hanky is allowed to escape little by little, first from one hand and then from the other, until the man-sized product is exposed to view.

Try this: Light a match and hold it under a handkerchief for half a minute. What happens? Well, most people have to buy a new handkerchief, but not the

not! For the performer simply passes the silk square behind his back and the knots obligingly melt away!

A knot, called a reef knot, is at the bottom of the whole business. Like this: The first knot

doesn't seem to mind exposure to a match flame the least little bit.

The performer takes someone's beautiful silk muffler, and ties the ends tightly into knots. Gr-r-rr! Does the owner of the muffler get mad? He does

The Penetrating Coin, Which Apparently Passes Right through a Twisted Handkerchief; the Sketches Show the Working of the Trick, and the Circle Inset, the Right Thumb Making the Double Fold

is made by passing the end of the handkerchief in your right hand behind the opposite end held in the left hand, as shown. In making the second knot, the end in the right hand is passed in front of the opposite end in the left hand, as illus-

trated. Such a knot looks discouragingly wrapped up in itself, but if you will take the two ends AA and pull, you will get the reef-knot effect as pictured. In this form, the

The Final Step in the Penetrating-Coin Trick, Top, Right; the Juggling Trick, Above, and, at the Right and Below, the One-Hand Knot, Tied by Flipping the Hand

kerchief. The coin is then twisted tightly within the hanky, but, no, the magician pulls it right out again!

Do it this way: Hold the coin in your right hand at the tips of the thumb and first

knot can be slipped off instantly and with one hand, while you are holding the silk behind your back.

Here's a good one! The performer takes a coin in his right hand and covers it with a hand-

finger. Cover it with the handkerchief. Then, to show that the coin is still there, you stretch the hanky tightly over it, using the thumb and first finger of the left hand, as shown in the back view. And therein lies the whole trick. Notice that the thumb of the right hand passes over the left-hand thumb, and then grips the coin through the fold.

Not satisfied yet, the performer lifts up the corner of the handkerchief next to the audience and shows the coin still underneath the cloth. And now, with a quick flourish, the performer shakes out the handkerchief, still retaining his grip on the coin. This brings the coin to the outside of the now diagonally folded handkerchief, as shown. It is wrapped up in this condition and then removed by simply untwisting the handkerchief and sliding the coin out into view. Try it!

Balancing a handkerchief upright on

your hand is a smart juggle which is quite puzzling. Of course, your audience is unaware that you have twisted a stiff piece of fine wire inside the handkerchief to give it the necessary rigidity to sustain its own weight.

Most people find it hard enough to tie a knot with two hands. So, try to imagine that awed look of amazement when the magician, with a sudden outward flip of his hand, ties a knot in the center of a large silk handkerchief.

This little interlude is quite easy. Hold the handkerchief as shown. A quick forward movement of the hand will bring the end A around so that it can be gripped between the first and second fingers at the point marked B. Holding the end A at the point B, the performer gives the handkerchief a quick outward toss, the knot magically forms in the center, and there you are!

SLIGHTEST TREMORS OF EARTH SHOWN ON NEW RECORDER

Earth vibrations as slight as one ten-thousandth of an inch are registered on a new recorder which is being tested in a government laboratory, thirty-five feet below the surface of the ground. Records are made photographically, the displace-

airplane or automobile, and some of the first waves will pass a quarter of the way around the world in ten minutes. The new instrument detects earthquake waves which may be flowing from one side of the sphere to the other, and is expected to prove of still further aid in predicting the occurrence of quakes that might be disastrous. Scientists keep track of the

ments or vibrations being shown 1,000 times greater on the record than they are during the actual movements incident to a quake. Study of the tremors with this and other instruments has shown that the shocks travel at tremendous speed, at least four times as fast as the swiftest

Quake Register in Government Laboratory below the Ground, and Sample of the Record It Makes

normal variations in earth movements and are sometimes able to issue warning when unusual tremors are about to take place.

Names and addresses of manufacturers of articles described will be promptly furnished, free, by our Bureau of Information.

Greater Selectivity for the Old Set

Sets that may have been amply selective a year or so ago now fail to separate the crowded broadcast channels. Selectivity is, of course, a matter of circuit design, the present-day set being selective because it has low-resistance circuits, well-shielded tuning units and the tuning condensers now used have the proper capacity variation. There are several ways of sharpening the tuning of the old set, however, without making any radical changes. A variable high resistance, shunted across the antenna and ground posts, reduces the signal pick-up from powerful locals when the operator is trying to cut through for distant stations. Another method is to make the detector less sensitive, which may be done by substituting a variable grid-leak for the fixed type or by placing a variable high resistance across the grid and grid-return terminals of the detector socket. Shielding will add materially to the efficiency of the old set. This may be done by lining the cabinet with tinfoil, shellacked to the inside for general shielding, and by providing metal partitions between the tuning units.

New Rectifier for A-Eliminator

A new dry-plate rectifier for A-eliminators of the type shown in the illustration has recently appeared on the market. It replaces the dry unit originally supplied with the A-power device and is said to give longer life and quieter operation. Being inclosed in a perforated metal case, it may be fastened to the eliminator in the manner shown. Two connections are all that are necessary to install it.

An Experimental Microphone

The microphone for the beginner, shown in detail in the illustration, is a homemade device that requires but one dry cell for its operation. When connected to the battery and headphones or a radio amplifier,

Construction Details of Homemade Experimental Microphone; Below, Completed Unit Showing Connections

it will transmit speech with good audibility. The person speaking should stand about 1 ft. away from the "mike." The construction requires little comment. The pencil, sharpened at both ends, is placed loosely in the holes in the upper and lower carbons so that it will move freely. Do not use too much battery; $1\frac{1}{2}$ volts is sufficient for good results. The author has found this device very sensitive, and many interesting experiments can be worked out with it. The carbon may be obtained from discarded batteries.—A. C. Alderton, Wanganui, New Zealand.

Homemade Aerial-Coupling Condenser

In trying out several short-wave hook-ups, I noticed that the commercial antenna-coupling condensers are not easily adjusted for maximum effect. The sketch shows a simple homemade type that works satisfactorily, as it provides a means of very fine adjustment. The sketch is self-explanatory. Small variable condensers of this type are useful for neutralizing or balancing, and the experimenter will find it convenient to have several on hand.—A. B. Robbins, Muscatine, Ia.

Radio Electric Shop Co.

1930. *Arthur Jensen, Radio Operator, 4301 Rigby Avenue, Washington, D.C.*

"Signing Off"—

Arthur Jensen, Radio Operator of the S. S. "American Shipper," Telling the World the "Vestris" Survivors Had Been Rescued

WHILE science is constantly devising means of securing safety on land and sea and in the air, in the final analysis it remains for mankind to furnish the heroes.

Radio, or wireless, as it was called in the days when the world first thrilled at its efficacy and felt more secure because of its existence, provides a way, but it still takes men to do the deeds.

Michael J. O'Loughlin, the newest name on the permanent roll decorating the fountain of honor in front of the barge-office tower, down at the Battery in New York, received the same kind of commendation that was given comrades in the service who have thought of others before they have thought of themselves.

A federal radio official said of this man,

who was lost on the tragic voyage to South America, that the "operator of the 'Vestris' handled his end of the distress traffic in a commendable manner from the time this observer first heard his signals

to the last transmission on failing power a few minutes before the last signals on his emergency set were sent, notifying all stations the ship was being abandoned."

There are twenty-three additional stories, each with its own scenery and characters and all with the same plot, which tell of the cruelty of the sea and the self-sacrifice of men whose minds responded so brilliantly in emergency, and whose generosity was so great that their lives were their gifts.

No matter whether the ship foundered on a reef, collided disastrously in fog or was a victim of fire or storm, each of the wireless operators who died at their posts, did the same thing—gave his life for others. Then there are those who have shown forgetfulness of self in relinquish-

Heroes of the "SOS"

ing places in lifeboats or giving up means of remaining afloat.

One youth rushed from his bed, pajama-clad, and in the three minutes before the ship sank, adjusted the auxiliary wireless set and succeeded in getting a call through. When both dynamo and storage batteries had been submerged by the sea, another operator and his chief succeeded in making the set function temporarily.

After performing fast work with the key, the wireless man of an Atlantic vessel gave up his life belt to a passenger. Out on the Pacific coast, another relinquished his hold on driftwood in order that it might support a woman.

The memorial which bears the stories of sea dramas was dedicated in 1912, after Jack Philips, the wireless operator of the "Titanic," had inspired the world to create a memorial to marine messengers. Under the inscription, "In memory of wireless operators lost at sea at the post of duty," appears first the name of George Eccles.

He was instrumental in saving 200 persons when his ship, the "Ohio," went on an Alaskan reef nearly twenty years ago. In the thirty minutes left to the "Ohio," he raised an Alaskan station which signaled two near-by vessels. In 1910, Stephen Szepanek flashed the call for help

Cage-Type Aerials Swing in Festoons from the Basket Masts of Battleships; This Is a View from the Mast-head of the "New Mexico"

being awakened when the "State of California" struck a reef in Gambier bay, Alaska. As so frequently happens, the dynamos failed and his main wireless set was rendered useless. However, in those three minutes he brought the auxiliary set, which runs on storage batteries, into use and succeeded in getting aid. He was made a prisoner when a lifeboat broke loose and jammed the door of the cabin, and sank with the ship.

When the "Monroe" was in a collision off the coast of Virginia, in January of 1914, Ferdinand J. Kuehn stayed in the wireless room flashing out calls for help until he was sure that assistance was coming. As he went on deck to assist in loading the small boats, he met a woman crying for help. Since she had no life pre-

when the railroad-car ferry which plied the Great Lakes sank as it approached Milwaukee. Whether a submerged rock or shifting loaded cars caused the plunge of the ferryboat is not certain. When help arrived, there was no trace of the vessel.

On the Pacific ocean, in 1913, young Lawrence A. Prudhunt refused a place in the lifeboats to stay at his task of summoning aid to the "Rosecrans." Due to his efforts, three men were saved of the crew of thirty-six. There were no passengers on board.

It was Donald Campbell Perkins who worked so desperately fast after

Lieut. Pedro C. Andres, of the Cuban Navy, with an Automatic SOS Sender of His Own Invention, Top, and the Directional Loop of the "Leviathan"

A Lone Sentinel Standing Guard over the "Celtic," After the Big Liner Ran Aground on the Rocks, While Entering Queenstown Harbor, Ireland, without a Pilot in a Dense Fog

server, he gave her his own and helped her into a lifeboat. There, by the davits, his foot slipped and he fell into the water, never to be seen again.

In April of that year, Walter E. Reker displayed his resourcefulness and bravery in a collision when the "Admiral Sampson" and the "Princess Victoria" crashed in Puget Sound. The "Princess Victoria" stood by so close to the sinking vessel that passengers could climb from one to the other until damaged oil tanks caused the "Admiral Sampson" to catch fire. Although the operator of the slightly injured vessel wirelessly that he would send for help, Chief Operator Reker stayed at his post until his calls were through. Afterward he assisted passengers to the lifeboats. When the last load had left, he reported to the captain on the bridge and went down with the ship.

A man of only seventeen years offered his life for others and gave it for one woman when the "Francis H. Leggett" foundered on the Duxberry reef off the west coast, in September, 1914. Clifton J. Fleming went down with the ship after staying at his post. Coming up in the pounding sea, he grasped a piece of wreck-

age for support. When he discovered a woman struggling in the water, he assisted her to the drifting wood and relinquished his hold upon it, since it would not support both. His assistant, Harry Fred Otto, had stayed with him in the wireless cabin sending out calls, until the Pacific closed over the little room. He was not seen again.

It was Adolph J. Svenson who, with his chief Loren A. Lovejoy, rigged up an auxiliary set as soon as the water ran off the storage batteries at another lurch of the sinking "Hanalei." When the wireless cabin was swept overboard, he assisted the chief in sending signals to the nearby Pacific shore with a flashlight. In spite of the fact that men on land could see the signals, it was almost impossible, due to the storm and terrain, for them to effect a rescue. When only wreckage remained of the "Hanalei," Loren Lovejoy was picked up from the piece of driftwood to which he was clinging by a passing ship. Adolph Svenson was added to that band who died on duty.

There follows a period of years when war added hazards to the seas. Mines, submarines and the danger of collision

Navy Radio Operator Broadcasting Weather Maps to Ships at Sea; This System Is One of the Most Important Advances in Navigation

© U. & U.

from running with few lights were new perils to augment wind, fog, fire and uncharted reef.

George Arundel Gear gave his life during those troublesome days. His ship was the "Manga Reva." His message, "Come as quickly as possible; am drifting before the wind with no boats," was sent off the coast of France. Neither he nor his captain had the comfort of knowing that other ships were racing to the rescue, for his last call reported, "No responses to calls for assistance. Going fast."

During the war, when armed naval guards were aboard merchant steamers, the tanker "Motano" was torpedoed by a submarine. Sinking within a minute's time, Russell A. Williams, the wireless operator, was among those to lose their lives.

Another disaster in which the ship sank so rapidly that very little rescue work could be done, was that off the Atlantic coast, on May 1, 1918, when, during a dense fog, a French warship rammed the

"City of Athens," a steamer in the coastwise trade. Francis Joseph Doherty, the wireless operator, went down with the ship.

Emile H. Hulsemann's last message was heard on Feb. 29, 1920. It is believed that the wireless of the "Cubadist" was torn away in the gales that characterized that season off Cape Hatteras and which took toll of this ship among the coastal traffic.

When the "Macona" struck a rock off the Nidigen light on the Swedish coast, Lawrence B. Robinson, wireless operator, lost his life. Only one of the crew of fifty was saved.

Evidences of fire on the drifting wreckage, marked with the name of another ship to join the mysteriously sunk, the "Swiftstar," gave evi-

dence that Ernest E. Dorsey was given no second to flash SOS. Mariners believe that this tanker was struck by lightning.

Two days after Christmas, 1923, within an hour after he had signaled that the number-one hold of the "Conejos" was filling with water, Fred Salim sent a last SOS reporting that the ship was sinking fast and giving its position in the Black Sea. Although its sister ship, the "Clontarf," and other vessels rushed to the aid of the distressed boat, no traces of it were found.

When the "Haleakala" was twenty-five days overdue, it was decided that it had been lost in the hurricanes which were sweeping the Atlantic coast. Peter L. Bacuinka was the radio officer who went down with this ship. About 200 miles west of the Philippines the freighter "Elkton" went down after the wireless operator, Charles F. Ruble, had flashed that it was disabled.

A smear of oil spreading for five miles was the only trace found of the "David

C. Reid" when rescue ships arrived. They had plowed through a storm area off the Azores after they received messages calling for help in October of last year. Maurice Black first radioed, "We are in a bad way. Come over." "We are going fast," was the cry seven minutes later.

There are three other men who were licensed to handle ships' wireless and who were lost at sea at their post of duty. Boris Michael Dutko was on the "Brindilla," which was lost in December of 1919. James J. Curran's ship, the "Moreno," went down in June, 1917, off the Azores. Lawrence M. Waring, Jr., lost his life on the "Cotopaxi," which foundered off the Florida coast in December, 1926.

At the dedication of the memorial. Commissioner H. Cabot Ward linked science and men and deeds in saying: "It is a wonderful quality of the human soul that new conditions always bring new manifestations of heroism."

Device Stops Man-Made Static

The filter shown in the sketch is a new development in the radio field along the line of devices designed to eliminate man-made static at the source. The manufacturer maintains a special service to help those who are confronted with such interference, which is a real problem for radio listeners. It is claimed to take out static caused by motors, blowers, fans, sign flashers, ice machines or any electrical device using 110 or 220 volts regardless of horsepower. The connections are simple, and the unit is housed in a metal container with holes for easier installation.

Popular Mechanics radio department offers its services free to all readers. We will be glad to help you with your problems and will promptly answer all inquiries.

Left, Filter Device Inclosed in Metal Container; Right, Diagram of Connections

Left, Combination Radio and Phonograph Unit, with Three Turntables; Right, Dynamic Speaker

Radio and Phonograph Amplifier

A simplified arrangement of phonograph pick-up unit and power amplifier combined with a radio set is illustrated here-with. This device is now available for small motion-picture theaters or other public places where loud volume and continuous programs are required. Three phonograph turntables are arranged to permit interchange of records without interruption. The dynamic speaker supplied with the combination unit is mounted on a large baffleboard which is supported in easel fashion.

A. C. Tube-Operating Hint

A.c. tubes, such as the CX-326 and C-327, and particularly the latter, operate at comparatively low voltages and high current; the CX-326 at 1.5 volts and 1.05 amp., and the C-327 at 2.5 volts and 1.75 amp.

Unless a socket whose spring terminals make very good contact with the tube prongs is used, the contact resistance between the tube prong and the socket terminal may be sufficient to reduce current supply to the C-327 to a value that is too low for satisfactory operation.

Bench for Spanish Radio Cabinet

THE BENCH described here is designed to harmonize with the Spanish radio cabinet illustrated in the October and November, 1928, issues of Popular Mechanics, but it is a handsome piece of furniture, and well worth building for its own sake. The construction is simple and the upholstering is easily done.

Either hard or soft wood may be used for the frame of the seat, and the construction is so well shown in the illustrations that no details are necessary. The four legs are turned from 2 by 2-in. rough walnut, which, if accurately centered on the lathe, will easily give the largest required diameter of $1\frac{3}{4}$ in. See Fig. 4. A little time in turning is saved if two legs are turned from the same stick. Use rough walnut stock, 1 by 2-in., for the stretcher, which is detailed in Fig. 6. If the legs of the radio cabinet were made of flat stock,

the legs of the bench should be made to correspond, and Fig. 8 details this construction. Cut four pieces of 1 by 6-in. rough walnut for the legs, smoothing two sides of each. Blanks for the two rails are made from stock 3 in. wide by 10 in. long.

Glue the rounds to the stretcher, then add the legs and slip the seat on. Reinforce the upper ends of the legs by nailing through the seat. If the work has been well done, the assembly should be square, and the stool should stand with very little tendency to rock. Before adding the upholstery, fill the stretcher and legs, then varnish or wax the walnut to correspond to the finish given the radio cabinet.

Unroll cotton batting on the seat, lapping it back and forth until the pile, when compressed, is $1\frac{1}{4}$ in. thick, stepping back the ends of the upper plies to give the curve to the edges. Allow the cotton to project a little beyond the sides and ends, so that the rail edges will not

Fig. 2

DETAIL OF
CORNER CONSTRUCTION

LEG DETAIL
4 REQUIRED

CLEAT, 2 REQUIRED

Fig. 3

RAIL DETAILS

ROUND DETAIL
2 REQUIRED

Fig. 5

jut out when the covering is drawn tight. Cover the stuffing with a piece of stout cloth, tacked in the centers of the sides and ends. Finish tacking by working toward the corners, and apply the tapestry.

Cut a strip of plush, 4 in. wide and 6 ft. long, for a band. Prepare a strip of narrow strap iron by punching holes every inch. Nail this around the top edge of the seat frame to hold the upper edge of the plush, pile inward. Sew the corner of the band and pull the plush down over the iron until it is tight. Tack the lower edge under the rails. Sew the metal fringe to the band.

The seat illustrated was covered with brown brocade having gilt flower designs and stripes in light blue and old rose edged with black and yellow. This same material was also used for the radio grill. For the band, a dark vermilion bordering on maroon was chosen, and this was used as backing for the radio-cabinet plaques.

The ornamental nail heads, shown in Fig. 7, are laid out on $1\frac{3}{4}$ -in. circles. Make a full-sized tracing with which to transfer the design to 21-gauge sheet brass. With tin snips cut the designs into individual squares, and cut the outlines with a jewelers' saw. Prick-punch the centers, scribe the center circles, and outline them

with a narrow chisel made by hammering and filing a round-nosed flat point on a spike. Use a hardwood block when outlining. Then lay the ornaments, upside down, on a soft-wood block and hammer up the centers and petals, using the round end of a glass-cutter handle, the ball of a hinge pin or any other available tool. "Antique" by heating in a flame, punch the centers for round-head brass escutcheon nails, and nail them to the stool rails,

as indicated, spacing them evenly with dividers.

The corner clasps are four in number, being designed as an overlapping pair of nail heads.

The photos accompanying the drawings show the following opera-

Fig. 8

tions: page 655, nailing the seat frame together and boring the holes in the cleats for the ends of the legs; page 656, the laying of the batting for the seat covering, and the paring off of a round to take the shoulder of the stretcher; page 657, boring a leg for a round, marking for the stretcher flat on a round, hammering out a nail head and two of the finished heads.

If you cannot get good walnut to make this stool, write to the Radio department, and we will tell you where to obtain it. Do not "spoil the ship for a ha'p'orth o' tar" by using soft wood.

Curing Noise in Set

The writer has a set that has been performing satisfactorily until recently, when, if anyone walked across the floor, heavy static noises issued from the speaker. Supposing it to be a loose connection, I cleaned the battery terminals, examined the tube and socket connections and renewed the speaker cord, but without improvement. I put in new tubes and batteries; still no improvement. After several weeks of this interference, I found the ground clamp on the water pipe in the basement badly corroded and very loose. This pipe being directly beneath the floor of the room in which the set was located was jarred by anyone walking above. A new ground clamp remedied the trouble. The moral is: When things go wrong with the set, start hunting for trouble at the largest connections, for without good aerial and ground contacts, it is useless to tinker with the set.

—Ralph LeCompte, Herbertsville, N. J.

Grounding of Transformer Cases Eliminates Hum

One of the most troublesome sources of hum is that due to external fields around the power transformers used in the power pack. This trouble may be eliminated by connecting the metal cases or cores of the transformers to either the ground lead or the B-negative lead of the receiver or power pack, so as to bring the cases and cores of all transformers to the low-potential side of the circuit. This also applies to the a.f. transformers, if they are not already grounded to a metal subpanel.

FOR THE RADIO BUILDER

The simplified blueprints listed below include the best of Popular Mechanics tested circuits. When ordering, simply quote the numbers of the blueprints desired and inclose the proper amount in an envelope addressed to Popular Mechanics Magazine, Radio Dept., 200 E. Ontario St., Chicago, Ill. Back magazines containing full descriptions of the circuits can also be obtained. Inclose an additional 25 cents for each magazine desired, giving date of publication.

Left, New Tube Checker Showing Plug for A.C. Line; Right, Checker in Operation with Tube Inserted

Tube Checker Operates from A.C. Line

The new tube checker shown in the illustration operates directly from the regular a.c. 60-cycle lighting circuit and is so designed that the circuit may have any voltage from 90 to 130 volts. It will check all tubes, a.c. or d.c., using filament current of 1.5, 2.5, 3.3, 5 or 7.5 volts, including rectifier tubes. The checker is equipped with sockets for UX, UY and

UV-tubes; a line-voltage adjusting dial; a five-point filament-voltage dial, push buttons and suitable meters. An instruction card is supplied.

ⓘ Dry cells may be tested with an ammeter having a scale of 25 or 30 amp.; the instrument should be held on the cell just long enough to get a reading, and cells showing less than 10 amp. should be discarded. A voltmeter may also be used; a good dry cell should register 1.4 volts and should be discarded when the reading falls to 1.1 volts.

Complete Kit for Service Men

A complete testing and repair kit for the busy radio-service man is shown in

New Radio Kit Showing the Complete Equipment Required for Testing and Service

the illustration, nothing having been overlooked that is necessary to meet any emergency. Safety devices protect all meters and circuits so that an error in testing will not damage the instrument or the set itself. It can be lifted out of the carrying case for store or laboratory use. Various fixed condensers, from .001 to 2 mfd., a 30-ohm rheostat, a 500,000-ohm variable resistance, and an audio transformer are available for instant use and in various combinations. The kit is equipped with standard meters and makes accurate tests of voltage and current of all radio receivers, including those using the newest tubes.

Removing Hum from Dynamic Speakers

First determine whether or not the hum is caused by the dynamic speaker, as it may be in the set instead. When located in the speaker, there are several simple methods of reducing and often eliminating the hum. One simple method of testing the speaker for hum is to remove the output tube of the set. when, if the hum continues, it is evidently in the speaker. Dynamic speakers are of three varieties, one in which the field is energized by direct current from a storage battery; another in which the field is energized by means of rectified 110-volt current, or 110-

volt direct current, and a third in which the field is energized by means of current from the B-eliminator. The battery-operated type cannot cause a hum. The second type is the one in widest use and most likely to cause the trouble. The third type seldom gives trouble and when it does, the remedy is usually beyond the average set owner. As regards the second type, simply shunting high-capacity condensers across the field coils will frequently eliminate the hum. These condensers should be of the heavy-duty type from 4 to 8 mfd., the capacity varying with the type of speaker used. In some cases, A-type condensers of large capacity are required across both field coils. In extreme cases, a high current-carrying choke of the type used in A-eliminators, placed in series with the rectifier and field coils in addition to the A-type condensers, will be required.

World Time for DX-Radio

The radio clock shown in the illustration is now available for DX-listeners who wish to follow the programs not only from their local stations, but of all the stations their receiving set will reach. As seen from the illustration, there is a secondary dial listing the principal time-zone localities, namely, Eastern, Central, Mountain,

Pacific, Alaska, Hawaii, Berlin, London, Canary Islands, Azores, Rio de Janeiro and Atlantic, thus completing the time circle. The secondary dial may be turned

so as to be set for use anywhere. With this arrangement one can determine local time in any part of the world.

When testing B-eliminators for maximum output with a low-reading milliammeter, the meter should be protected against burn-out by a fixed resistance of 1,000 ohms or more placed in series with the meter.

AMATEUR MECHANICS

“Outboard Motor” Pleases Youngsters

By HI SIBLEY

ROWING a boat has always seemed a clumsy and laborious means of getting over the water. Maneuvering in close quarters and on small ponds is awkward with oars. It's tough on unaccustomed backs in a pull against the wind, and your boat loses momentum between each stroke.

Turning a crank is much easier, as with this manual outboard motor. Perhaps one cannot go quite as fast with this device as with oars, but the push ahead is continuous, and a youngster with imagination will get a real thrill from seeing the water churning up behind; besides, he

FRONT END OF PROPELLER
SHAFT FILED FLAT ON 3
SIDES, THESE FLATS
THEN NOTCHED FOR
CHUCK

can reverse it instantly as in a motorboat.

If you own a hand drill, the job is half done. The drill constitutes your motor, and this outboard is so designed that the drill can quickly be taken out and used for its original purpose at any time. The only alteration—and even this is not absolutely necessary—is extending the crank handle to give greater leverage. In the one illustrated we simply built up an extension from three sections of perforated bar borrowed from a toy-construction set. A flat iron bar will serve even better in case you can drill the holes for the bolts and handle.

The framework should be made from a piece of wood, 39 in. long, 1 in. thick and 3 or $3\frac{1}{2}$ in. wide. Select some tough wood not likely to break or split. Yellow pine will do.

Saw out as shown in the diagram, and bore the two holes for the propeller-shaft bearings. These bearings, which are sections of brass tube, should be driven in to a snug fit. After being in the water a short time, the wood will swell and hold them securely in place. They do not need to be as long as the holes in the wood.

For the propeller shaft, we used a brass

curtain rod, $\frac{1}{4}$ in. in diameter, since it happened to be the only thing on hand at the time. However, a cold-rolled steel rod, $\frac{3}{16}$ or $\frac{3}{8}$ in. in diameter, is recommended, depending upon the size of your drill chuck. The cheapest hand drill, by the way, will suffice for a light-duty motor, its only disadvantages being the noisy gears and unreliability of the chuck, as well as its inability to stand a heavy load. A big sturdy drill will be much better if you care to make the investment.

Cut the propeller shaft to $25\frac{1}{2}$ in., then flatten the forward end on three sides with a file for a length of about 1 in. In the center of each flat place, file a groove, about $\frac{1}{16}$ in. deep, running lengthwise. These grooves are to give the three chuck jaws a better grip.

The propeller is much more easily made than might be expected. Use a piece of close-grained wood, 2 by 2 in. in section by 7 in. long. Saw out as indicated by the dotted lines and bore the hole for the propeller shaft. Have this a snug fit, but not too tight, or, in forcing the shaft in, you may split the wood.

With a gouge or curved chisel, make one side of each fin concave and the other,

or forward side, convex. When finished, the fins or blades should be about $\frac{1}{4}$ in. thick. Whittle the edges all around to about $\frac{1}{8}$ in. thickness, then round them with sandpaper. With a sharp jackknife, round the hub so there will be no sharp corners or edges, and thus make it smooth and streamlined. Insert the propeller shaft so that the end is flush with the backside of hub. Now carefully drill about a $\frac{3}{32}$ -in. hole through hub and shaft and insert a nail or steel pin.

Take pains with your painting. If convenient, apply a coat of filler to the propeller and sandpaper smoothly when dry. Two coats of bright red give a lively touch, and they should be followed with two coats of spar varnish. Let each coat dry and sandpaper well after all but the final coat.

Now you are ready to fit the hand drill to the frame. It will be simple if you have the type of drill used by the writer. In this a stud opposite the center of the main gear is set in a hole in the wood frame, and the handle is clamped to a grooved section by means of a brass strap.

If you have selected a nicely grained wood for the frame, leave it in the natural finish, covering with two or more coats of spar varnish.

Cut the rudder, as shown, from a piece of galvanized sheet, as heavy gauge as your snips will handle. Paint the rudder well with bright red, same as the propeller, or a bright green. Give it two coats of spar varnish also, and, when dry, attach to the frame with screws.

The final assembly consists simply in inserting the propeller shaft in the bearings and tightening the chuck jaws over it. If your propeller blades are tilted in the right direction, as shown, the rotation tends to keep the chuck tight, so that after a few revolutions you can reverse under load without fear of loosening the chuck jaws.

We found that by notching the stern board of the boy's little boat, the propeller would sit lower in the water and at the same time be in a more convenient position for the operator. This, however, will not be practicable if the boat at your

disposal is a rented or borrowed one.

You will find the making of this little outboard an absorbing pastime during the spring evenings, and you will then be ready for a cruise as soon as navigation opens. It can be conveniently carried anywhere, and the efficiency of this sturdy little power plant is limited only by the muscles of your arm.

Cover for Auto-Tire Padlock

Mud, which gets inside of the padlock used by many car owners on their spare tire, causes considerable difficulty in opening the lock when the tire is needed. To prevent this, a cover should be provided for the lock. It can be made from a piece of thin leather, cut and folded and then sewed up the sides as shown. A coil spring is slipped over the open end, which is then turned back over the spring and

the edge sewed down, imbedding the spring in a hem. The bag is made to fit snugly over the padlock and, when finished, it is turned inside out so that all seams will be hidden. The spring holds

the bag on the lock securely and prevents mud and water from getting into it.—F. J. Wilhelm, Cincinnati, Ohio.

Cardboard Device Used by Photographer for Finding Best Viewpoint

Finder for Photographs

I have found the illustrated device useful in selecting a viewpoint for any particular landscape or object to be photographed. A card is cut to the same size as the plate or film used in the camera, and a rectangular hole, about two-thirds the size of the card, is cut out with a sharp knife or razor blade. At the inside edge of the opening thus formed a small cord is attached as indicated, and a number of knots are tied at intervals on this cord, the distance from the edge of the hole to the knots being equal to two-thirds of the focal lengths of the various lenses used on the camera. The landscape or object to be photographed is viewed through the opening of the card and the distance of the eye from the frame is varied by holding different knots against the upper part of your cheek, just under the eye, until the frame includes the desired picture. A lens of corresponding focal length is adjusted to the camera. On my camera, I use lenses of $4\frac{1}{2}$ to $16\frac{1}{2}$ -in. focus. The outside dimensions of the card enable one to carry it with the plate holders.—W. H. Wilcox, Tacoma, Wash.

Dry-Cleaning Mixture

An emulsion of gasoline and water is much used by dry cleaners for removing grease, tar and paint spots from clothing. It is in the form of a thick, white sirup, which evaporates entirely and is not injurious to any fabric or color. This emul-

sion can be prepared as follows: Dissolve, in 1 qt. of boiling water, $\frac{1}{2}$ oz. of pure castile soap and $\frac{1}{4}$ oz. of gum arabic. Allow this to cool, and then add 1 oz. glycerin, 1 oz. strong ammonia water, $1\frac{1}{2}$ oz. chloroform, and 2 oz. sulphuric ether. Shake well, and pour enough of the mixture into a quart bottle to fill it for $\frac{3}{4}$ in. On top of this pour gasoline to raise the level $\frac{1}{4}$ in., and shake until creamy. Repeat the addition of gasoline, shaking each time, until the bottle is full. The cleaning mixture will then be ready for use, and may be applied with a rag or with a small brush. If, on adding the first lot of gasoline and shaking, the mixture does not become emulsified, too much gasoline has been added. In this case, allow the mixture to stand for a few minutes and pour off the excess gasoline, which comes to the top. Shake well, and add a smaller quantity of gasoline. When the bottle is half full, larger quantities of gasoline may be added at a time. It is interesting to note that the more gasoline is added, the thicker the emulsion becomes, and if the addition of gasoline and the shaking is prolonged, a semisolid jelly is formed, which will not run from the bottle. Keep the emulsion away from open flames.

Conserving Motor Heat in Zero Weather

Fitting a shutter in front of the radiator of your car is highly recommended to keep the heat of the motor at an efficient operating temperature, and the pro-

vision of cardboard or asbestos strips inside the lower part of the hood to close the ventilating slots, is also advisable. Besides this you will find that asbestos "fluff," which is used for steam-pipe packing and is obtainable at almost any mill-supply house, provides considerable insulation when stuffed between the dust and oil pans of your car, as shown in the drawing.—R. P. Cole, Paterson, N. J.

Toy Speed Wagon

Provided with a stout rubber band, this speed wagon will travel at a fast clip for more than 100 ft. One model has covered 250 ft. on a single winding. To make it, get four can covers for the wheels; cut 2 strips from the side of one can, bend the ends over at right angles and punch holes through them to serve as bearings for 2 lengths of wire which serve as axles. Push the wires through holes punched in the exact center of the wheels, and then solder the wheels to the axles. Cut a narrow board, about 2 ft. long, and fasten one set of wheels and axle to each end. Drive a nail in the underside of the board just behind the front axle, in the center, as shown in the detail. Get a stout rubber band and tie one end to this nail. Then wrap the other end of the band around the rear axle and turn the wheels to wind the band on it. If you stretch the rubber while winding, you can wind it much tighter. Set the wagon down on the floor and let it go. In one case the band was wound so tightly that the wheels would spin, unless a brick was placed on the wagon. To make the wagon run in a curved path, turn the front axle slightly,

Toy Wagon of Simple Construction Driven at High Speed by a Stout Rubber Band

which can readily be done if it is attached by means of a screw driven through the center of the tin strip. You can also add other details, such as a hood, seat, steering wheel, radiator, etc. File all edges down so that they are as smooth as possible, and when you wind the rubber, take care not to let the wheel spin in your hand, for even a smoothed tin edge may make a bad cut.—Dale R. Van Horn, Lincoln, Nebr.

Flower Stands Made from Barrel Hoops

Wooden barrel hoops can be used for making artistic flower stands like those shown in the drawing. They can be made

Flower Stands of Various Kinds Can Be Made from Wooden Barrel Hoops

To bend hoops without breaking steam or soak in hot.

of various shapes and sizes and, when finished, are given an application of paint to add to their appearance.

Care of Automobile Doors

When you are oiling your auto, do not neglect the door hinges and latches. Many rattles and squeaks can be traced to door hinges and old anti-rattling devices. Slamming doors too violently is apt to break the door-window glass, or it may spring the door, and it is then almost impossible to prevent it from rattling. For the same reason, it is a good plan to examine the door checks occasionally.

☞ To level rough ground quickly and effectively, drag an iron rail over it, tying each end to a suitable length of chain or rope and attaching it to a tractor.

Philip Ambrosini 457-37th St. Brooklyn, N.Y.

Be Sure That All Sanding Dust Is Well Rubbed Off Before Starting to Varnish

How to Refinish

Finishing with Stain and Varnish

stored to its original state by patching, polishing or the application of an additional finishing coat. It should, of course, also be remembered that the stain finishing of fine furniture calls for the exercise of considerable good judgment, and that those without previous experience in the use of finishing materials should first do some smaller, medium-grade pieces to be sure the results obtained are satisfactory before attempting expensive furniture.

Ordinarily a previously stained piece can be refinished in a darker stain effect with satisfactory results, but wood previously stained dark can seldom be satisfactorily refinished in lighter effects. Red-mahogany stain in particular is very powerful, and it is practically impossible to use any except the very dark stains, such as walnut or brown mahogany, for refinishing surfaces previously finished in red mahogany, as the stain deep down in the wood, which cannot be entirely removed, will "bleed" through and "muddy up" the new finish, so it will not present a very pleasing appearance.

IN THIS issue we are going to take up the extra-fine stain finishing of furniture by removing the old finish and building up the desired new finish by coloring the wood with stain, and then applying finishing coats of varnish. This is the method skilled finishers use in refinishing operations of the highest class.

We will take for an example an end table in the red-mahogany finish which used to be fashionable but now is no longer seen in the best-furnished homes, and change it to the modish brown mahogany of today. In this connection, it is to be assumed that there are only two reasons why the householder will ordinarily want to remove the old finish and build up a new one from the wood. One is to change the effect, and the other that the old finish is in such bad condition it cannot be re-

In starting the refinishing of the table, the first step naturally will be the removal of the old finish. This is not a difficult operation, although it is rather a disagreeable one to those who are not accustomed to it. The work is best done with the prepared paint and varnish removers made especially for the purpose. Alcohol is sometimes used, as is also benzol and other solvents, but they do not act so quickly and efficiently as the prepared removers. Lye is also employed, but its use is not advisable, as it is likely to burn the wood and injure it for refinishing. Some people also sandpaper down the old finish instead of using paint and varnish remover, but this is not such a satisfactory method, for it is impossible to sand out checks entirely as long as any of the old finish remains, and to sand it

Your Old Furniture

by
Berton Elliot

down clear to the wood is a hard job, and a much longer one than the removal of coatings with a solvent remover.

The method of using paint and varnish remover is as follows: Brush a liberal coating onto the surface, being sure to shake the container thoroughly to agitate the contents, immediately before using, and also being careful not to get any of the remover onto any near-by painted or varnished surfaces.

Allow the application of remover to remain on the surface until the old coating is softened, which usually takes about five minutes, then scrape off the softened coating with a putty knife. Carvings, moldings and other hard-to-get-at places may be reached with a small vegetable brush or a piece of steel wool (which should be fine) dipped in the remover. In some cases where the old finish is exceptionally heavy or adheres tenaciously to the surface, a second or third application of the remover may be necessary, but not as a general rule. After the removal of the old finish has been completed, the surface should be thor-

oughly washed with a cloth saturated in gasoline (preferably high-test) or benzine, or, better still, scrubbed out with a vegetable brush dipped in the gasoline or benzine, to remove any remaining deposits of the paint remover. This is extremely

important, as paint removers are ordinarily made with a wax content, which, if left on the surface, will interfere with the drying of the new finishing coats or cause other trouble.

As soon as the surface is thoroughly dry, you are ready to build up the new finish. The first step, as in all finishing, is to sandpaper the surface. While it may seem to be quite smooth,

Applying Rubbing Oil to the Surface When Polishing with Rottenstone

it is always wise to sand lightly before any finishing is started, to take off any nibs or dirt and insure the last degree of smoothness. For fine finishing, only very fine sandpaper should be used (not coarser than 0000). Care should be taken to sand evenly all over the surface, so that the refinishing coats of stain will produce a uniformly even effect. When through, loose particles of sand and sawdust should, of course, be dusted off carefully.

The next operation is the application of the stain. For the home finisher, a stain of the penetrating type is best. Oil stains, although suited for use by the amateur, are only adapted to new wood, as when a wood has once been filled, stained and varnished, its porous qualities are partly destroyed, so that oil stains will not penetrate sufficiently. There are other types of stains which require more skill in application and therefore should be used only by the skilled craftsman. Before starting to apply the stain, a try-out should be made on some obscure part of the table, as it should be remembered that a stain gives somewhat different color effects when used on different kinds of woods, and also varies somewhat accord-

ing to the previous finish and the quantity of stain that may be left in the wood when the old finish is removed. If the effect is found to be too dark, the stain can be lightened somewhat by adding a little turpentine.

The application of the stain itself is a comparatively simple operation. One coat only should be applied, as evenly and uniformly as possible, without covering any part of the surface twice. If any places are skipped, touch them up with a small brush. After staining, the surface ordinarily should not be sandpapered, as it may cut through the color in places.

The next step is the application of filler, if the piece is of one of the open-grain woods, such as oak, walnut, mahogany, chestnut, etc. This should be done after the stain is thoroughly

Top, Sopping On the Remover; Center, Staining the Piece; Below, Rubbing Off Filler across Grain

dry, usually the following day. While the wood, if of the open-grain type, was undoubtedly filled when the piece was originally finished, the application of the paint and varnish remover usually removes some of the filler as well as the finish.

The function of the filler is to fill the pores of the wood, so that the following varnish coats do not sink in, and to level the surface for the finishing coats. Ordinarily paste filler is used for open-grain woods, this material coming in thick paste form, to be reduced with benzine or turpentine to about the consistency of thick cream immediately before use, and being made in different shades, such as natural, oak, walnut, mahogany, etc. The color of the filler should correspond with the effect desired.

Filler is applied with a brush, and, within a few minutes after application—as soon as it commences to set, which is indicated by its turning flat—is wiped off across the grain with a cloth, rubbing vigorously until every bit of surplus is removed, the last stroke or two being with the grain. The filler should not be applied on too much surface at a time, for if it sets hard before you get it wiped off, it will be hard to remove, and this must be done or the finish will be disfigured with grayish streaks. In case it should get too hard, it will have to be washed off with turpentine or benzine, or perhaps taken off with sandpaper dipped in turpentine or gasoline. When the filler has dried for 24 hours, the surface should be sandpapered very lightly, and dusted clean.

The next operation is the application of a thin coat of shellac, to seal in the stain, which would otherwise bleed through the finishing coats of varnish. Shellac, being made with alcohol and containing no linseed oil, is impervious to the attack of the strong dyes used in penetrating stains, which attack linseed oil. For use over brown mahogany, walnut and the darker shades, orange shellac is recommended, as its yellowish cast helps to bring out the true beauty of the effect. (For light-stain effects, white shellac should be used.) After the shellac is dry—it dries very quickly and becomes thoroughly hardened in about two hours—it should be sandpapered lightly to a smooth surface, but not too much, so as to sand it off entirely.

Rubbing Down between Coats with Fine Sandpaper on Felt Pad

After dusting clean, you are ready for the finishing coats of varnish.

For the highest-class work, three coats of high-grade interior-finishing varnish (gloss) should be applied, allowing three, or preferably four, days for drying between coats, and rubbing the first and second coats with No. 0000 sandpaper (or, for the best possible job, with pumicestone and water) and the final coat with pumicestone and oil, to the desired effect. Full directions for pumice rubbing were given in the December, 1928, issue of this magazine, and detailed information regarding the technique of applying varnish in the March, 1929, issue.

A high polish of piano finish is sometimes given fine furniture by rubbing with rottenstone (which can be obtained at paint or drug stores) and oil, after the pumice rubbing is completed. Simply rinse off the pumice with clear water, and begin rubbing with rottenstone and oil, using a very soft cloth or soft rubbing felt, and proceeding over the entire surface until a beautiful high polish is produced. Then rinse off with clear water and dry with a chamois or soft cloth. In case any places are found to be dull after the clean-up, they should be rubbed to

match the rest of the surface; then the entire surface is given a few strokes to produce a uniformly even effect, and cleaned off thoroughly when through.

From the foregoing, it will be seen that the refinishing of an old piece of furniture in a fine stain finish is really quite a simple operation for anyone who likes handcraft. There are just these five operations: taking off the old finish; applying the stain; applying the filler; applying the varnish coats, and rubbing (and polishing if desired).

Then, if desired, a last finishing touch can be added by the application of transfer decoration in one of the medallion patterns or wood-inlay effects designed especially for use on stain-fin-

ished furniture, and you will have a piece that compares with the mahogany or walnut-finish furniture shown in the stores.

When using the decalcomania transfers, it is, of course, necessary to choose a pattern that will imitate a wood inlay, that is, one that resembles the background as closely as possible. Bright, highly colored transfers, while quite suitable for painted, lacquered or enameled furniture, are entirely out of place on stained and varnished pieces. There are many transfers, however, that resemble inlay and marquetry work, in comparatively dull colors, and any good paint house can offer

a selection that will enable the amateur finisher to suit his walnut or mahogany pieces. Take care to place the transfer accurately. If it is off center or not straight, it will mar the effect of the most careful finishing.

Scraping Off Softened Varnish with Putty Knife after Sopping with Remover

Removing Auto Wheel without a Puller

If you have to remove a rear wheel of an auto and there is no wheel puller at hand, jack up the opposite wheel, setting the jack at a slight outward angle so that the weight of the car pulls on the axle of the wheel to be removed. Take off the hub cap and the hub nut, reverse the nut and screw it on the shaft until it comes flush with the axle, and tap the axle with a hammer until the wheel comes loose. The nut is reversed so that no damage will be done to the castellations. I have found this method successful with the tightest wheels.—K. E. Corliss, Langley, Wash.

Memorandum Pad and Holder

One of the most useful types of memorandum pads is one that incorporates a roll of paper, which can be torn off at any length desired. It is easy to make one from a piece of tin, brass or galvanized sheet iron, the dimensions and shape of which are given in the upper detail. The dotted lines show where the metal is bent. Two $\frac{3}{8}$ -in. metal straps are soldered onto the sides at the top and bottom of the pad holder as shown, a slight space being left between them and the holder. In use, a roll of paper is laid in the box section and the end pulled between the top and the straps. If desired, the holder may be given a coat of lacquer to improve its appearance. All the sharp edges, are, of course, smoothed with a file or piece of sandpaper. The used paper is torn off by pulling against the bottom strap, as on a wrapping-paper roll.—H. J. Wubbold, Salisbury, Md.

You Can Prevent Loss of Your Motor by Tying It to the Boat with a Six-Foot Rope

Preventing Loss of Outboard Motor

Some time ago, when attaching an outboard motor to a boat in rather rough water, I overbalanced with the result that the motor and myself had an untimely bath. It was quite difficult to recover the motor in 15 ft. of water, and I decided to prevent a similar accident by fastening a 6-ft. length of rope to the motor before lifting it out of the boat. A harness snap, fastened to the shank of the wingbolt of the motor clamp, provided a quick means of attaching and detaching the rope. Of course, the other end of the rope was securely tied to the boat. Another simple method of preventing the loss of the motor, due to vibrations loosening the screws clamping the motor to the boat, was found successful on a Wisconsin lake. A piece of $\frac{1}{16}$ -in. sheet copper was bent to fit over the transom of the boat, and screwed to the wood. The motor fits over the copper in the usual way, but the clamp screws get a good grip on the soft metal, and do not seem to become loose. A combination of both methods described should prevent any possibility of loss or trouble.—Dick Cole, Los Angeles, Calif.

Novel Effects *from*

In making this checkerboard, the first step is to procure a sheet of heavy white cardboard or bristol board, 16 in. square. Now, measure in 2 in. from each edge of this square and rule another square to form a border, 12 in. along each side. Divide this inner square, with ruler and T-square, into 64 small squares, as shown in Fig 2, each of these smaller squares measuring exactly $1\frac{1}{2}$ in. to a side.

That finished, take a small piece of cardboard, and in the center of it cut out an opening $1\frac{1}{2}$ in. square. This is the "finder." By placing it in various positions over a snapshot, you are enabled to select the most picturesque or interesting bit of the picture, and after finding it, you should outline it by running a pencil around the inner edge of the cardboard square, as shown in Fig. 3. Your snaps, of course, should be of the $2\frac{1}{4}$ by $3\frac{1}{4}$ -in. size, at least, so that there will be plenty of detail in the pictures, although $1\frac{1}{8}$ by $2\frac{1}{2}$ -in. "vest-pocket" snaps will do in a pinch. Outline 32 of your best snaps in this manner, and then cut out each of the squares with a paper cutter or a pair of sharp scissors, as shown in Fig. 4. After cutting the snapshots, take a pen, and, filling it with black ink, run a

OF COURSE you have a camera.

Every summer you go on a grand spree of picture taking—snaps of the fish you catch, artistic and unartistic photographs of your friends and relations, a beautiful bit of scenery; in fact, everything from a mud turtle to a midsummer sunset is fit material for your black box. And then, at the end of an arduous summer, you take the vast collection, look them over for the last time, and then plank the whole bunch in a shoe box with the rather vague intention that some day you will take them out again and put them in a pretty album where they can yellow away to a decent old age with some pretense at luxuriousness.

That's the average amateur photographer. Like a lot of others, you take a picture and that ends it, and you never give a thought to the wonderful decorative effects that can be obtained from the camera and your old snapshots.

But here's what you can do: Go over your accumulation of snapshots. Among them you will, of course, find two or three dozen or more pictures which you especially like, and from these a photographic checker or chessboard, as shown in Fig. 1, can be made.

black border around the outside of each square, as shown in Fig. 5.

The next step is to mount the photo-

your Old Snapshots

by

Sam Brown

①

graphic squares on the ruled sheet of cardboard. In doing this, 16 of the pictures should face one way and 16 the other, so that each player will have 16 pictures facing in his direction, as shown in Fig. 6. The final step in the construction of the checkerboard proper is the border. If you have the necessary artistic ability, a simple pen-and-ink border can be drawn around the framework of photographic squares; if not, the simplest method is to paste a narrow strip of suitable wallpaper border around the edge, mitering the corners so that the edges will fit nicely together. A small, diamond-

the same size as the cardboard and paste or glue the checkerboard to one side of this. Cut a piece of heavy glass to exactly the same size as the board and place this over the top of the layout of photographic squares. Bind the edges of the three assembled pieces with a 2-in. strip of colored felt, cutting the felt at an angle every 16 in., as shown in Fig. 8, so that it will make a neat joint at the corners, as shown in Figs. 8 and 9.

Almost finished! It remains yet to glue a square of felt to the bottom of the board so that it will not mar the surface of the playing table, and then—your move!

A neat top for a card table, as shown in Fig. 10, can be made in a similar manner, and here the scope for artistic grouping of large and small pictures is considerably enlarged. The various steps in the construction of the photographic card table are much the same as those used in mak-

shaped or circular photograph can then be pasted in each corner, as in Fig. 7.

Now cut, from $\frac{3}{8}$ -in. lumber, a piece of

ing the checkerboard. If desired, the photographs can be pasted directly to the surface of the table (this should be light in

puzzle is finally assembled, as shown in Fig. 12. This particular puzzle was made from an enlarged snapshot of the Harding Memorial, at Marion, Ohio, but any other type of picture—landscape, personal, marine, etc.—can be used to equal and often to greater advantage. A small boy would surely appreciate puzzling out his own picture over assembling a photograph of a locomotive, of a beauty spot in the Grand

color in order to contrast) instead of to a sheet of cardboard, although the latter is the better method. The binding for the card table can either be felt, as for the checkerboard, or narrow brass strips (such as are used for the edges of oilcloth-covered tables), bent at right angles, can be used to hold the glass in place.

Something entirely different is the photographic cut-out puzzle. Take one of your best snaps and have it enlarged to about 7 by 10 in. Mount this enlarged picture on one side of a thin slab of wood, preferably three-ply veneer, so that it will stay flat, using a good grade of glue to hold the photograph firmly in place. After the glue has set and dried, take a coping saw or a fretsaw and cut the mounted photograph into small sections, as shown in Fig. 11. This can be done haphazard or from a penciled pattern, as your fancy dictates.

In cutting the photograph, downward pressure should be used only on the outward stroke of the saw, as a heavy, downward pressure on the backstroke tends to give a slightly ragged edge to the picture which will mar its appearance when the

canyon or striking scenic view elsewhere.

Still another phase of decorative photography from your old snapshots is the making of transparencies. A transparency is a positive film; that is, the snapshot film appears like a snapshot photograph made transparent. The varied uses for these transparencies are legion, but, perhaps, in the making of lampshade decorations they are most popular.

The how of making them goes like this: Take about six of your favorite negatives and retire to a room which is entirely darkened with the exception of a dim light furnished by a red electric bulb or

by an ordinary white bulb masked with red paper. The red paper that films are wrapped with in the original package makes a good safe light. In this dark room, take a roll of film of the size that fits your camera and unwind it. After procuring the length of film, cut it with scissors into six small pieces of a size to fit your negatives, as shown in Fig. 13.

Now, take one of the pieces of the new film and place it on a piece of black velvet, felt, or dead-black paper. Put the negative film over this, and, on top of the two, a clean piece of glass. That done, take an ordinary match. Light it. Hold it about $2\frac{1}{2}$ ft. away from the glass, as shown in Fig. 14, and

match. The match should be waved slightly to and fro as the exposure is being made, and this exposure should be of no longer duration than the match-head flame mentioned, as further exposure will "burn up" the film.

What happens is quite obvious. The light penetrates through the light

allow it to burn for the duration of the initial flame caused by the head of the

and dark portions of the film negative and makes a positive impression on the lower

film. This positive imprint, when made in this fashion, is technically known as a transparency. After making the usual six exposures, place the prospective transparencies into a black box and take them to your photographer. He will develop them in the usual manner, producing positive films like the one shown in Fig. 15.

The practical value of these films lies in the fact that their transparency makes them quite suitable for mounting on lampshades and side-bracket lights.

The first step in mounting them is to cut out the necessary area from a plain undecorated lampshade, or perhaps you can find a parchment lampshade with a design which readily permits the cutting out of some portion to allow the insertion of the picture. After cutting out the framework, trim the transparency to the required size and paste it in place on the inner side of the shade. A piece of transparent paper should be used as backing, in order to give the picture more brilliancy. Some idea of the effect can be gained by the illustrations in Figs. 16 and 17, although the full delicacy of the transparency is something far too illusive to be reproduced on the printed page. The effect can be varied by using thin colored paper to back up the transparencies, or thin colored celluloid, the color being chosen to suit the subject.

Novel Sign for Roadside Pop Stand

The proprietor of a small roadside pop stand, just outside of a small Nebraska town, has a novel advertisement which is especially attractive at night. It consists of a 5-gal. keg bored to admit the ends of empty pop bottles as shown. A 150-watt electric lamp is provided inside of the keg, and the open end of the keg is closed. At night, when the light is turned on, the bottles let the light through, making the odd sign visible from the road.

Back-Up Light Which Works Automatically When Car Is Reversed

Installing a Backing Light on the Car

Any motorist can provide a back-up light that works automatically when the gear-shift lever is thrown into reverse. Get an ordinary stop-light switch and mount it on a bracket, which is in turn attached to the transmission cover as shown. The switch is so located that the gear-shift lever bears against it and closes the circuit. A 4-in. spotlight is mounted at the rear in a convenient position. The small diagram shows the method of connecting the lamp and switch in the circuit. —G. A. Luers, Washington, D. C.

Soldering Iron Removes Putty

Putty can readily be removed from old window sash in which the pane has to be renewed, by means of a red-hot poker or hot soldering iron. An electric iron with a wedge-shaped point is the best for the purpose as it remains hot. After getting the point down to the wood it can be pushed along, peeling the old putty clean without damaging the wood on the sash. —Mason Barnard, Worcester, Mass.

Half of an old flour barrel, cut lengthwise and laid on the ground with stakes driven in at the open end, makes an excellent coop for a brood of young chicks.

Small Mirror Attached to Swivel Joint on Handle Helps Inspection of Hidden Places

Handy Mirror for Inspecting Corners

Machinists and shop workers often find it necessary to inspect a corner which is out of the line of vision and can only be seen by the use of a mirror. In such cases a small mirror taken from a cosmetic compact and attached to a handle so that it can be adjusted, will be found "just the thing." Remove the mirror from the lid and solder a ball-and-socket joint to the outside edge of the lid. Joints of this kind can be found on gas-throttle rods and distributor rods of autos, and can be picked up for a few cents at any auto junk yard. Tighten the socket on the ball until it moves rather stiffly. Screw a piece of the rod into the joint and attach a wooden handle, about 7 in. long, so that the complete handle will be 10 in. long. When entirely finished, replace the mirror. Such a tool will be found useful for inspecting corners inside of tanks and boilers with a flashlight for illumination; for checking timing gears without removing the radiator, and for inspecting and timing a magneto without removing it.—C. Neiper Bruce, New Castle, Pa.

Quickly Made Soldering Acid

Preparation of soldering acid by dropping pieces of zinc into muriatic acid until all bubbling has ceased, which indicates that the acid has been properly cut, takes a long time and is more or less messy. An equally effective flux can be made from a few cents' worth of zinc chloride mixed in

water to make a saturated solution. The flux thus made is ready for use as soon as it is mixed. As the salt is extremely deliquescent it should be kept in an airtight bottle.—J. S. Hagans, Chicago, Ill.

Warning Signal for Low Beam in Cellar

There are quite a number of cellars in which the center beam is lower than the joists, and no matter how careful you are, you occasionally will bump your head against it painfully. After this had happened to me a number of times, I decided to prevent repetitions by providing a warning signal that I would see when approaching the beam. I had noticed that most people walking down into a cellar have their eyes fixed on the floor and therefore I got a paintbrush and some black paint and marked a line on the floor directly under the beam. When I catch sight of the line, I always remember to stoop.—J. A. Dowie, Alexandria, Va.

Fishing through the Ice

When fishing through a hole in the ice the hole is likely to freeze over during the night unless it is covered. Sometimes a piece of paper or cardboard is laid over the hole and this is covered with straw or hay, but the disadvantage of this method is that, unless it is securely weighted down, the straw may be blown away. A better method, which

I have found successful, consists in setting a piece of corrugated cardboard, roughly shaped to form a tube, into the hole and then filling the top of the tube with straw or hay. A little water applied to the edge of the ice and to the outside of the tube will soon freeze and hold it securely in position.—Dale R. Van Horn, Lincoln, Nebraska.

How to Grow Dwarf Trees and Shrubs

Dwarf trees and shrubs of the Orient are famous the world over. If you enjoy gardening or experimenting with such trees and shrubs, here is a simple method of growing them in your own home. Carefully remove the pulp from a half grapefruit or large orange. Let the peel dry to some extent and then apply a single coat of shellac or varnish on the outside. When dry, fill with the finest and richest leaf mold you can get. Rich fertilized earth will do in a pinch. In the center of the shell, plant a tiny seedling of the tree or shrub you wish to dwarf. Set in a sunny place and water occasionally. As the seedling grows, the roots will eventually pierce the sides or bottom of the fruit-skin pot. With a sharp knife, or scissors, trim each projecting root flush and apply varnish or shellac on the wound. Repeat this operation for a few months and then transplant the tree to a pot or jardiniere of suitable size. Pine trees, orange, lemon and quince trees are the easiest to work with, although there are countless varieties suitable for experimentation.—M. W. Meier, Langley, Wash.

The Pirate's Lair

Simple Door Holder

Two shade-roller brackets, one attached to the baseboard and the other to the door so that they will engage as shown in the drawing, will be found efficient as a door holder. The concavity of the brackets and their smooth edges, cause them to engage easily when the door is pushed open, and similarly to slip apart readily when it is closed.—R. Wailes, Bethesda, Md.

Wind and Waterproof Sleeping Bag Can Be Made from a Piece of Canvas and Two Blankets

Combination Shelter and Sleeping Bag

When one does not feel justified in purchasing a sleeping bag, a good substitute can be made cheaply and without much work. The materials needed are one piece of duck about 6 by 16½ ft., the weight being determined by the user according to his needs for shelter, and 2 doz. brass grommets with ½-in. holes. Also get a few yards of good stout tape, thread and needles. Space the grommets about 15 in. apart on the long edges of the canvas. Then sew 1-ft. lengths of tape to the edges of your camp blankets, spacing them to match the grommets in the canvas. It is a good idea to have the lengths of tape sewed on by machine. In use, the canvas is laid down flat as shown in the drawing. The blankets are laid on it, and the lengths of tape are tied to the grommets. Fold one blanket over the other and there will then be exactly 2½ ft. of canvas projecting at the head end of the bed thus formed. Tie up one edge of the bed all the way, using heavy fish-line, rove through the grommets back and forth from end to end. This will make the edge practically windproof. The other side is similarly tied, halfway up or entirely.—Dick Stafford, Boulder, Colo.

Pocket First-Aid Kit

Handy and compact, features which are appreciated by hunters and campers, are the requirements of a pocket first-aid kit. I have found no better container for such a kit than a small tobacco can of the kind shown in the drawing, which can be

obtained almost anywhere. Give the box two coats of white paint and, if desired, paint a neat red cross on one side. Have the druggist put up the following items in slender 2-drachm tubes: aromatic spirits of ammonia; soda-mint tablets; iodine or mercurochrome; a saturated solution of permanganate of potash, which is used for insect bites and stings; 10 drops of oil of cloves in sulphuric ether, this being used as a toothache remedy; a small roll of adhesive tape, removing the tape from the container and filling the latter with zinc oxide which is used as a burn ointment; a roll of 2-in. gauze; a small package of absorbent cotton and a square of surgeons' lint, which is sold in waxed envelopes about 6 in. square. To assemble the kit, take about half of the absorbent cotton and place it, tightly rolled, in the bottom of the can. On this stand four of the tubes vertically. Place a small pair of scissors between the tubes and the side of the can. Add some rubber bands and toothpicks and the surgeons' lint. A small card or paper, containing straight pins and some small safety pins, besides a needle and thread, is then inserted. A pair of tweezers can also be accommodated. On top of the tubes lay the tube of soda mints on its side, and above this place the tin containing zinc oxide, and about half of the roll of gauze. A small piece of soap and the tape can then be fitted in a corner. Be sure that the

corks on the tubes are all tight. This kit is the result of fourteen years' experience. —Harold J. Boyd, Orlando, Fla.

Enlarging Small Negatives

Amateur photographers who enlarge small negatives and find that the grain of the gelatin emulsion is objectionably magnified in the process, may counteract this trouble by simply immersing the negative in a liquid which has nearly the same refractive index as the negative and the base. Such a solution may be carbon tetrachloride, benzene, turpentine or glycerin. In a horizontal enlarger these solutions should be used in a tank, made by clamping a strip of soft rubber between two sheets of glass, or in a vertical enlarger a clear glass tray can be used. A simple method is to sandwich the negative between two glasses after covering both sides with a thin coating of glycerin. If the enlarger radiates much heat, it is best to treat the film with a hardening solution, such as formalin, before immersing.

Hinge Makes Good Gate Latch

Any large strap hinge can be converted into a good gate latch. With a hacksaw or cold chisel cut off one end as indicated by the dotted lines, and recess the remaining portion so that it is wide enough to fit over the gate frame. Screw the

hinge to the fence post as shown, and nail on a block to keep the latch end horizontal. Bend the ends of the latch section upward a trifle so that it will slip into its locking position more easily after it

has been lifted to release the gate. If the gate is required to swing in one direction only, a stop block may be nailed onto the post, and an unslotted hinge can be used in practically the same way with just sufficient clearance between it and the stop block to accommodate the gate frame.

Using Gasoline Stoves and Lanterns

Gasoline treated with lead tetraethyl, so-called "ethyl gas," cannot be used instead of "straight" gasoline in stoves and lanterns. Exhaustive tests seem to indicate that ethyl gas relieves the knock in a motor by retarding the explosion, and many users think that it is a gas of exceptionally high-test quality. Gasoline, however, merely holds the lead tetraethyl in solution in the same way as salt is held in water. When the gas is vaporized in the generator of a gasoline stove or lantern, a solid residue is left, which quickly plugs up the orifice in the generator tip. Then the stove ceases to burn. Campers who siphon fuel from their auto tanks should be aware of this.

Bell Anchor for a Small Boat

An old differential-housing cover plate, fitted with an eyebolt as shown in the sketch, makes an excellent bell or mushroom type of anchor for a small fishing boat. This anchor does not depend on its gross weight to hold a boat. It digs into the sand, gravel or mud at the bottom and is therefore more effective than a heavier plain-weight anchor. When drawn to the surface, its accumulated contents can be rinsed out before lifting it into the boat.—Dick Cole, Los Angeles, Calif.

Effective Bell-Shaped Anchor Can Be Made from Old Differential-Housing Cover Plate

Convenient Transplanting Box Consisting of Jogged Strips of Sheet Metal

Making Transplanting Easier

A sheet-iron box, with removable partitions forming a number of compartments, will facilitate transplanting. For ordinary plants, make the box 3 in. deep and from 20 to 27 in. square, depending on the size needed. For the partitions, get strips of sheet metal and bend them at 3-in. intervals as shown, first to the right and then to the left. These bends should be true right angles so that the strips can be slipped out when necessary. On each side of the jogged strips straight strips are provided. Fill the compartments thus formed with rich earth and plant the seeds. When the plants have reached the desired size, transplant them. Remove a whole row, which can be conveniently done because of the jogged strips, and it is then an easy matter to separate the individual plants.

Ⓘ When lighting matches in the wind, spread an envelope by pressing on the edges and use it to shield the flame.

Good Substitute for Water Bag Made from Pail and Towels

Substitute for Water Bag

Nearly everyone knows the value of a water bag for supplying a cooling drink when ice is not available. If none is at hand, a good substitute can be had by wrapping wet towels around a pail of water suspended in a breeze. The edges of the towels should overlap the rim of the pail and dip in the water. The cloth acts as a wick and draws up sufficient water to keep the towels moistened. The evaporation of the water in the towels cools the contents of the pail. It is well to cover the pail with a piece of cardboard, and if no breeze is blowing, to swing the pail on a rope tied to the limb of a tree.—Dick Cole, Los Angeles, Calif.

Screw-Slotting Hacksaw Blades

Every mechanic's tool kit should contain a set of four screw-slotting hacksaw blades. These are similar to the ordinary blade, but are wider, and each of a set of four is of different width, the widest being $\frac{1}{8}$ in. It is obvious that the set will save the metal worker considerable time in cutting slots and grooves. Slots wider than $\frac{1}{8}$ in. can be made by making

the second cut parallel to the first. Little or no dressing up is necessary when the job is finished.—J. S. Hagans, Chicago, Ill.

Homemade Gas Vaporizer for the Auto

Here is a gas vaporizer that will help to start your car quickly on a cold day. It consists of an army-rifle cartridge shell threaded at the small end to fit a tapped hole in the gas-intake manifold. The cap hole is enlarged so that a screw slipped through two mica washers, one on the inside and the other on the outside of the cap, will not touch the shell. A hole is drilled through the side of the shell at the small end for another screw, but this one, unlike the first, must make actual contact with the shell. A piece of asbestos paper is cut so that, when rolled to form a cylinder, it will fit snugly inside the large part of the shell. Get a length of resistance wire, as part of the element from a discarded electric-heating unit, wrap it around a nail to form a small coil and connect it to the two screws on the shell, as indicated in the illustration. Screw the shell into the hole you drilled in the intake manifold. Connect the screw on the cap of the shell to one side of a switch, which may be mounted on the dash or instrument board, and connect the other side of the switch to the ungrounded side

of your storage battery. By closing the switch so that current will flow through the resistance wire in the shell, considerable heat will be produced almost instantaneously, and this will enter the intake manifold, vaporizing

the gas before it reaches the cylinders.—Clyde E. Volkers, Terre Haute, Ind.

☞ A mixture of four parts sodium fluoride and one part of pulverized sugar is effective in destroying ants.

SHOP NOTES

All Shop Notes published in 1928, in book form—Fifty Cents—from our Book Department

Sanding on the Lathe

By W. CLYDE LAMMEY

MOST home craftsmen will agree that the sanding of their work, preparatory to finishing, is the most tedious part of the whole business, and, for that reason, it is often slighted, to the detriment of the finished job. Sanding rough stock especially demands the use of no little energy, and where there is much of this work to be done, it will pay the worker to spend a little time in the construction of a contrivance to do the sanding mechanically.

This is easy if he has a small lathe in his home shop.

Obtain a piece of 3 by 3-in. stock, 10 in. long, and cut a groove, $\frac{1}{4}$ in. wide and 1 in. deep, down the center of one face, that is, $1\frac{1}{2}$ in. from the edge. Center the piece in the lathe and turn it to form a drum, $2\frac{3}{4}$ in. in diameter. Be careful to

Here Is a Simple Sander That Will Take the Hard Labor Out of Finishing Lumber, Insuring a Good Surface with a Minimum of Work

have the drum of exactly the same diameter throughout its length. Any kind of stock will do for the drum, although good well-seasoned hardwood is preferable.

Next get a piece of 2 by 8-in. stock and cut from it a piece, 16 in. long. Draw a line square across the stock, in the center of its length, and on this line bore two holes for $\frac{1}{4}$ -in. bolts. Cut another piece of stock of the same width, but 1 in. thick and about 2 in. longer than the width across the lathe ways. Cut two grooves across the face of this piece, so that they will fit over the underside of the lathe ways, as shown in the drawings, and, using the first piece as a template, drill two holes for $\frac{1}{4}$ -in. bolts.

The height of the table shown in the illustrations is $5\frac{7}{8}$ in., from the top of the lathe bed to the top of the table. This is for a lathe of 8-in. swing, but of course this dimension must be determined by the lathe the sander is to fit. The tables are made of 1-in. stock, well dried, and should be at least 8 in. wide, and better 10 in., to afford a good bearing for the work. They must be planed to a true surface and mounted rigidly on the 2-in. base. Use screws and glue (not nails) in assembling, and be sure that the height of the drum carrying the sandpaper will not be more than $\frac{1}{16}$ in. above the surface of the tables. Also be sure that the surfaces of the tables are not thrown out of true in assembling. Bevel the ends of the tables that go next to the drum. The method of mounting the assembly on the lathe is apparent from the drawings.

A sheet of garnet paper is attached to

the drum by cutting to size and folding the edges into the groove, afterward driving short wedges into the groove on the ends and cutting them off flush with the surface of the drum, so that they do not strike the work.

It will be found that this sander is a great improvement over the hand method, the high speed of the lathe leaving the work smooth and without objectionable scratches. It also leaves a true surface, if the work of constructing the sander has been done with reasonable care.

Swab for Applying Acids

An easily made swab for applying acids and other substances, which must not come in contact with the fingers, is shown in the photo. Simply remove the contents from an old flashlight dry cell, fold a piece of burlap or heavy cloth into a flat strip and pinch the opening of the cell tightly over it.

The zinc is worked easily with the fingers, and it holds the cloth or swab firmly. The remainder of the cell provides a convenient grip for the swab.—F. W. Bentley, Jr., Missouri Valley, Iowa.

Parts of Car That Are Seldom Lubricated

Many automobile owners are under the impression that every part of the car has been oiled or greased sufficiently at some time or other. However, this is far from true, and there are usually a number of places that are seldom lubricated even though they need it badly. Insufficient lubrication often is the cause of expensive repairs. The grease cups that are hard to get at are neglected even by many garage attendants, so the owner ought to know where they are. They are usually found in inconspicuous locations as, for exam-

ple, the two cups that oil the outer rear-axle shaft and the roller bearings. These are located on the rear-axle housing, near each end and close to the brakes. It is more important that they be given attention than the spring hangers, but in spite of this, only a few auto owners know of their existence. These cups should be filled once a month. The efficiency of the brakes depends to some extent on how well the brake mechanism is lubricated. One brake pin may "freeze" for lack of oil, and this will throw the entire mechanism out of proper adjustment. Once a month it should be oiled, from the pedal to the brake shoes, with penetrating oil. Another often neglected part is the universal joint. Of course, nearly everyone knows it's there but it is nevertheless frequently overlooked. A few drops of oil on the generator is necessary now and then and clutch bearings should not be forgotten.

Resurfacing Farm Anvil

An old farm anvil can be resurfaced with very little work by using the rig shown in the illustration, which consists of a grindstone or emery wheel driven back and forth over the anvil surface by means of a pump jack run by a small engine. A 12-ft. length of 2 by 4-in. stock is used as a connecting rod between the pump jack and the emery wheel, and a suitable weight is tied or otherwise fastened to the top of the connecting rod, near the emery wheel, as indicated. In some cases, it may be found necessary to provide guides for the connecting rod so that the emery wheel will not slip off.

Resurfacing an Old Farm Anvil by Means of a Pump Jack and Emery Wheel

Load-Balancing Pushcart

Heavily Loaded Cart Can Be Better Balanced by Shifting the Axle

Loaded pushcarts are often improperly balanced so that, when the greatest weight is on the front end, the cart will have a tendency to tip over in this direction, and when the most weight is on the back, the person pushing the cart must practically lift the load besides pushing it, which is very tiresome. To overcome this trouble, I arranged the axle so that it could be moved either forward or backward to balance the load. The axle was bent to a U-shape and was securely attached to the underside of the cart by means of eyebolts. A Y-shaped brace, made from flat iron, was fitted on the ends of the axle, holes being drilled in the ends of the brace for this purpose. A slot with two notches was cut in the single end of the brace to accommodate a bolt, with which it was held to a flat-iron bracket attached to the underside of the cart near the handle. The bolt is fastened securely to the bracket by means of two nuts, and the slot in the Y-brace slips on the shank of the bolt, but cannot come off as it is held between the head of the bolt and one of the nuts. The end of the Y-brace is bent down at right angles to form a handle, permitting the worker to shift the brace and wheels back and forth as desired. The body of the cart is held quite firmly in either position.—S. E. Schofield, Indianapolis, Ind.

Simple Hitch Permits Worker to Lower Himself at Will on Boatswain's Chair

Rigging Boatswain's Chair

To rig a chair for lowering or raising yourself, hook a single block on the roof, wall or structure on which you are going to work, and with a gantline rove through it, make the chair fast as shown in the upper left-hand detail. Get in the chair and have someone pull you up to the top. Then take a small length of rope or strong marline and lash the two parts together, being careful to have the lashing secure so that it will not slip. The man below can then let go of the end so that you can pull up some slack. Then take hold of the bight of the rope and pull it toward you through the bridle of the chair as in the upper right-hand detail. Slip the bight over your head, around your body and the chair, and draw it up as shown in the center drawing. You can now let go of the lashing and you are all set to lower yourself at will. This is done by taking hold of the rope and pushing it through the loop. It cannot slip or get away from you.—C. Newkirk, Chicago, Ill.

☐ A length of garden hose, split and slipped over the teeth of a saw that is being filed, is a handy arm protection.

Reducing Speed of Lathe

Here is a novel method of reducing the speed of a small metal-cutting lathe: Get an old-type auto-starting motor equipped with a sprocket, of the kind used on many models prior to 1919. These motors have a reduction gear, which in case of a Wagner motor is 1 to 10. Remove the core and commutator from the shaft so that the case serves merely as a housing for the shaft and the gears. A small grooved pulley, suitable for a $\frac{1}{4}$ -in. round belt, is securely fastened to the shaft. A length of belting is run from this pulley to a similar grooved pulley on the motor that drives the lathe. A bicycle sprocket is attached to the driving pulley on the lathe and in line with the sprocket on the starting motor, the two being connected with a bicycle driving chain. I have reduced the speed from 1,750 to 50 r.p.m. in this way.—Sidney Cornell, New York City.

Compressing Heavy Springs

When assembling rather stout or heavy springs, as, for example, the spring retainers for truck radiators, the method illustrated will prove advantageous. A wire nail is placed through the cotter-pin hole in the end of the stud and the spring is screwed down on this, thus gradually compressing the spring. When the spring has been screwed down far enough, the washer and nut are slipped on a few threads, and the nail withdrawn. This method will save 10 to 15 minutes of fumbling and prying down on the spring, while trying to engage the thread of the nut.

Annealing Small Sheets of Aluminum

After a small sheet of aluminum has become hardened by hammering or swaging, it can be softened again by smearing a thin coating of ordinary vaseline on both

sides and holding the sheet over a Bunsen-burner or gas-plate flame. The surface becomes black at first. By continuing the heating while moving the sheet back and forth, it will suddenly turn to its natural color. When this happens, the sheet must be removed immediately and left to cool in the air. Do not cool it under water. —L. L. Llewellyn, Piedmont, Calif.

Adjustable Horses Found Convenient

A number of adjustable horses of the kind shown in the photo are used in a Denver machine shop for supporting broad material at the different machines. The horses are made mostly of wood. They are 4 ft. long and 30 in. high at the lowest adjustment. The 6 by 6-in. main part of the horse is braced to the legs with strap iron and reinforced with a $\frac{1}{4}$ -in. steel plate on top and bottom. A 2-in. square bar of steel, with $\frac{3}{4}$ -in. holes $\frac{1}{2}$ in. apart, passes perpendicularly through the body, near each end. The top ends of the bars are split and forged to fit grooves turned in a 2-in. steel roller, which supports the material. A rod, passed through the holes in the vertical bars, holds the roller at any desired height.

Horse with Roller of Adjustable Height Found Useful in Machine Shop

Two Views of a Large-Size Photograph Printer Which Is Equipped with Exhaust Fan, Vacuum Pump and a Number of Switches

Large-Size Electric Printer for the Photographer

Ordinary photographic printers will only take negatives up to 11 by 14 in. in size. To make prints 20 by 24 in., and larger, one firm found it necessary to build a special printer. The photo clearly shows the construction and the arrangement of the lamps and snap switches, one switch being used for every three lamps, to enable accurate control of illumination. Altogether there are sixty-three 60-watt lamps and two red lamps for placing the paper in position. This printer will take negatives up to 30 by 40 in. in size. After the negative is placed in position and the printing paper laid on it, the rubber blanket is clamped in place and, by starting the vacuum pump, with which this printer is equipped, all the air between the pressure glass, negative and paper is removed, insuring absolute contact over the entire surface of the print. Another feature is an exhaust fan on the left side to remove the hot air from the inside.

Frank H. Wilding
Grand Rapids, Mich.

Wood Joints for the Amateur

PART III

THE BRIDLE joint (Fig. 4) is a very handy joint for the amateur, since it is a little less difficult to make than the mortise-and-tenon joint. Its usefulness is not as wide as that of the latter and lies more in carpentry and joinery than in cabinetmaking. However, for light frames for small doors, window and draft screens, etc., it is quite satisfactory, and also for the center legs of small semi-circular tables, as indicated.

The end bridle joint of Fig. 5 is common for frames, and is known also as an open-slot mortise and tenon. The mitered bridle (Fig. 6) looks a little more difficult, but is really simple to make. The parts must be carefully laid out with square,

bevel gauge and knife. Then the vertical cuts forming the tongue are made, holding the work at an angle in the vise and cutting down to the line defining the length of the tongue. The shoulders are then cut in the miter box. The cutting of the mouth will be described later, in connection with the end bridle. The joints in Fig. 7 are used mostly in heavier work, although the oblique bridle finds occasional employ in cabinetmaking.

When making up a frame for a light paneled door, as in Fig. 8, note that the bottom of the groove for the panel on the inside edges of the rails is even with the inner edge of the tenon A, thus making the groove easy to plow. The grooves

on the inside of the stiles run into the slots at the ends, so there is no difficulty in plowing them.

When making a bridge joint, the thickness of the stock is usually laid out into thirds. Set a mortise gauge to the size, and gauge the edges and ends as in Fig. 9, which shows how both pieces are laid out for an end bridge, or how the leg in Fig. 4 is marked out. Fig. 10 shows the two pieces laid out, and it will be seen that the length of the slot in the leg, W, is the same as the width of the rail. After laying out, mark the waste, or stock to be cut away. The waste on the rail is cut away exactly as described for making a half-lap joint (Fig. 2, March issue).

To cut out the waste in the slot, drill a hole, about $\frac{1}{16}$ in. less in diameter than the width of the slot, as shown in Fig. 11, taking care to keep the hole vertical and square with the face edge; saw along the lines to release the waste, and pare the bottom of the slot square.

An alternative method is to make the kerfs first, sawing just inside the line, and down to the line for the bottom of the slot. Then, using a chisel the exact width the slot is to be and setting it, with the bevel toward the bottom of the slot, about $\frac{3}{16}$ in. away from the line (see left-hand sketch, Fig. 12), drive the chisel in about $\frac{1}{2}$ in.; withdraw and move it back about $\frac{1}{2}$ in., with the bevel facing outward and drive it in as at B, so as to take out a triangular chip. Set the edge of the chisel exactly on the line for the bottom of the slot, with the bevel toward the outer end, and drive it straight down, as at C. Move the chisel outward again, and take another chip as at D. This will bring the cut down to about the center of the stock. Now turn the stock over and repeat the process on the other side, so that the stock will appear as in the section at E, and the waste will drop out as at F. If the cutting has been carefully done, no further work is necessary.

Box with Shelves and Partitions, Locked Door and Air Holes, Protects Grain Bags

Box for Fanning-Mill Screens and Grain Bags

Fanning-mill screens and grain bags can be kept out of the reach of rats and mice by storing them in a wooden box, as shown in the illustration. Shelves and partitions are provided in the box so that the stored material can be arranged in an orderly manner, and large holes are cut in the ends to provide adequate ventilation, the holes being covered with wire mesh tacked down securely on the inside to prevent the entrance of rodents. Care should be taken to have the door or cover fit snugly and a hasp and padlock may be provided. Periodical examination of the box is recommended so that, if rodents have gnawed a hole in it, prompt repair can be made.—J. R. Koontz, Bremen, Ind.

Prints from Wet Negatives

Nearly every photographer realizes that certain pictures, especially those for newspaper publication, must be finished quickly in order not to lose their news value. To make contact prints from wet negatives, a saturated solution of potassium carbonate is prepared. After the negatives have been washed they should be wiped off carefully with a soft cloth or a piece of chamois skin, and placed in the potassium-carbonate bath for a few mo-

ments, after which they are again wiped dry. The potassium carbonate provides a dry surface from which contact prints can be made. The negative should be thoroughly washed and dried in the usual way after the prints have been made. When enlargements from wet negatives are required, the negative should be rinsed free from hypo and placed in a five-per-cent solution of formaldehyde for one or two minutes. The negative will then withstand the heat of the enlarger and any number of copies can be made. If the negative is to be preserved, it must be washed and dried in the regular way after being removed from the enlarger.—Jesse A. Leason, St. Paul, Minn.

Kink for Using Tape Line

Often, when using a tape line, one has no helper around to hold the eye end, which is particularly inconvenient when measuring from one point to another without any surface to press the line against. This trouble can be eliminated in many cases by opening the middle section of a 2-ft. rule, catching the eye of the line on the small wire pin, and then closing the halves of the rule so that the eye will be held firmly between them. When making vertical measurements the rule can be laid down and one foot put on it while drawing the tape taut. If the measuring is to be done on the ground, the rule can be pushed down into the soil.

Preventing Marks on Work in Lathe

When running a piece of finished work in a lathe steady rest, it is common practice to place a piece of soft metal over the end of the jaws in order to prevent them from scratching the work. A better and more up-to-date method is to make an

extra set of jaws out of bakelite or similar material. They are very strong and will not scratch the work.

Clearance of Milling Cutters

In grinding the clearance on the cutting edge of milling cutters, sufficient attention is usually not paid to the angle or exact amount of clearance the cutter will have on the work. If too great, the cutter will have a tendency to chatter and make a rough finish, to say nothing of the disagreeable noise, and the loosening up of the bolts and clamps on the machine will cause the heel of the land to drag, making an uneven surface, and is liable to break the teeth. The angle depends, to a great extent, on the diameter of the cutter and also on the material it is to cut, although, in general, milling cutters are used on almost anything that can be cut, from a piece of hard wood to high-carbon tool-steel, making regular shapes, such as plain, slabbing, slanting, or angular, while in those that are made up for a special job and used for that purpose only, more attention must be given to the kind of material to be cut. Generally soft materials will machine better with more clearance than tool steels, and the like, although conditions may cause the reverse to happen. Usually, for cutters up to 4 in. in diameter, from 6 to 7 deg. will be found ample on the outside diameter. Over and above this diameter, the angle may decrease, say, $\frac{1}{4}$ deg. for each 1 in. in diameter, until 4 deg. is reached, which is about the minimum amount for any cutter. The clearance on the teeth of end mills should be from 2 to 3 deg., when the cutters are used for roughing and finishing. If used for roughing alone, a little more clearance will be better. —A. Dane, Pottstown, Pa.

When Breaking Concrete

Using an Old Broom to Hold the Chisel When Breaking Concrete

An old broom will come in handy when breaking up concrete. Use it as shown in the drawing to hold the bull point or chisel, and to prevent bits of concrete from flying up. When using a compressed-air hammer, or power concrete breaker, slip a piece of screen, about 1 ft. square, over the point of the drill. This will enable the operator to see the work through the screen without danger from flying bits of concrete.

Sawing Metal Rod at an Angle,

To saw lengths of tubing or metal rod at an angle on the power saw, I use a couple of pieces of wood as auxiliary vise jaws.

Using Wood Jaws for Sawing Metal Rod and Tubing at an Angle

By allowing these to extend a little beyond the cut as indicated, I have found the work can be sawed at any angle just as easily as straight. The saw, of course, cuts through the wood jaws before striking the work, so that, by the time it reaches the cut, it is well guided. Scrap pieces of wood are usually to be found around any machine shop. —Harry Moore, Montreal, Can.

Tool Driven by a Ratchet Wrench, Handy for Drilling in Confined Places

Simple Tool for Close Drilling

For drilling in close places, a small ratchet drill is often found too large. A more compact tool is necessary where the flanges of the castings or the webs of channels are spaced 3 or 4 in. apart. One of the handiest devices for use on such jobs consists of a suitable length of hexagon bar stock, a setscrew and a ratchet wrench. A hole is drilled in one end of the bar to accommodate the drill, and the other end is drilled and tapped for a setscrew, the head of which is ground to a point. The drill is ground down, half of the head being removed as shown in the upper-right detail. This allows it to be securely locked so that it will not turn. The ratchet wrench is then slipped over the body of the tool, and by manipulating this, the hexagon part will be turned and the screw will be fed down into the work.—G. A. Luers, Washington, D. C.

Strong, Durable Plaster-of-Paris Mixtures

Fifteen years ago, I set $\frac{1}{4}$ -in. bolts, attached to a sundial triangle, into $\frac{5}{8}$ -in. holes, 3 in. deep, in a stone base on the grounds of the Ontario hospital, at West Toronto, Can. The cement I used was made of 4 oz. of plaster of paris, 4 oz. of portland cement, and $\frac{1}{2}$ oz. of dark brown sugar. The ingredients were well mixed, and just enough water was added to make the whole fairly stiff. This cement has been exposed to the weather at all times, and the bolts are as firmly set in it as they were 15 years ago. The same mixture is often used by heating engineers to cement together the joints on 4-in. cast-iron pipe, sometimes used in greenhouse heating. It sets very hard and is waterproof and easy to work. The addition of a small quantity of fine sand will make a stronger and perhaps harder cement. To keep plaster of paris soft for slow working, mix wheat flour in it, in the proportion of $\frac{1}{4}$ oz. of flour to every 5 oz. of plaster. Using a greater amount of flour will retard the drying of the cement still more. If asbestos powder is used in plaster of paris to make it tough, it should be very carefully sifted through an extra-fine sifter before using it. Coarse asbestos powder will prevent the cement from setting so strongly as when finer powder is used. All combinations of plaster of paris and other powders should be thoroughly mixed before adding any liquid.—James E. Noble, Toronto, Can.

Nailing Joists Single-Handed

One man can handle a joist single-handed and nail it in place at both ends by the method shown in the illustration. Drive a nail partly in at one end near the

Joists Can Be Nailed in Place Single-Handed by Following This Method

top of the joist and hook the nail over the sill to hold the joist in place temporarily until the other end has been nailed securely. Then remove the first nail and proceed to nail this end also.—H. H. Siegele, Emporia, Kansas.

Kink for the Planer Bed

While watching a worker setting up a job on the planer bed one day, I noticed that he had his clamps resting on several sloping surfaces. Wondering how he was able to keep the clamps from slipping off, I investigated and found that he had placed short pieces of old files between the end of the clamp and the metal incline, making the surface non-slipping.—Frank N. Coakley, Buffalo, N. Y.

Expanding and Contracting Circular Machine Parts

Circular machine parts are sometimes machined slightly over or undersize. In the latter case, the part is sometimes plated to restore it to the desired diameter, but, in many small shops not having plating equipment, simpler expedients must be used. A method of expanding and contracting circular parts, which, while not highly accurate, will serve in many cases, consists in driving a taper pin into reamed holes drilled near the edge of the work as shown in the drawing. The examples illustrate the method of decreasing the size of the bore and enlarging an undersize bushing, plug or disk. The material to be altered must be moderately soft, so that it will yield to the pressure applied

with a comparatively hard taper pin. The only tools necessary for this work are the usual drill and taper-pin reamer.

Iron Hooks Used to Anchor Concrete Window Box Securely to Basement Wall

Window Boxes Anchored to Cellar Wall

Many houses built nowadays have the first floor only a short distance above the ground level, which makes it necessary to box in the basement windows. The boxes are usually made of concrete and, in many cases, they gradually pull away from the wall and allow leakage. To prevent this, one contractor anchored them securely to the wall by means of two iron hooks, as indicated in the drawing, the hooks being imbedded in the concrete when this is poured. If the basement wall is built of stone or concrete blocks, the anchors are slipped between the stones or blocks when the latter are laid, and then imbedded in the window box. It has been found practically impossible for the boxes to pull away from the wall when anchored in this way.

Easy Method of Sandpapering Auto

When I started the job of repainting my auto, I knew that a lot of sandpaper and muscle was necessary. I drove the car down to the beach, and by using plenty of sand and water with a piece of heavy felt, I removed most of the paint. By using a fine grade of sandpaper in going over it a second time for finishing touches, the job came out very smooth, at a considerable saving in effort and sandpaper.—Charles Latour, Jr., Plattsburg, N. Y.

PART II

FIGURES 5 and 6 detail the upper section. While complicated in the assembly, the individual parts are comparatively simple. The back is 2 ft. $2\frac{3}{4}$ in. by 3 ft. $4\frac{3}{4}$ in. From the right upper corner a piece, $7\frac{3}{4}$ by $11\frac{3}{4}$ in., is cut, and for a distance of 5 in. above the horizontal part a strip $\frac{1}{4}$ in. wide is cut. Mark for this cut and saw obliquely toward it, springing the blade out, and cutting in with the line as quickly as possible. Then saw in the opposite direction to finish the cut. This notch receives the rabbeted end of a side-piece. The upper left corner is cut out 8 in. by 1 ft. 10 in., the vertical cut then be-

ing notched $\frac{1}{4}$ by $6\frac{1}{4}$ in. at the bottom and $\frac{1}{4}$ by $7\frac{1}{2}$ in. at the top. Rabbet the lower end $\frac{1}{4}$ by $\frac{3}{4}$ in. for $8\frac{1}{4}$ in. from the left, and 8 in. from the right.

The long right side (center piece marked A in Fig. 6) is $16\frac{3}{4}$ in. by 34 in. Rip $\frac{3}{4}$ in. off the back, extending from the lower end to within $4\frac{3}{4}$ in. of the top. Cut a $7\frac{3}{4}$ by 8-in. piece from the lower back corner, and rabbet it $\frac{1}{4}$ by $\frac{3}{4}$ in. Then, from the front upper corner, take a piece $7\frac{1}{4}$ by 9 in. A $\frac{1}{4}$ by $\frac{3}{4}$ -in. dado is cut full width of the inner face, $12\frac{1}{4}$ in. from the lower end, and a second one, $2\frac{3}{4}$ in. above it. A third is made 7 in. farther up, that is, with the upper side flush with the bottom of the big

notch. This is deepened to $\frac{1}{2}$ in. on the horizontal part of the notch, and this $\frac{1}{2}$ by $\frac{3}{4}$ -in. rabbet is carried up the notch and across the top. The left rabbet corner is notched $\frac{3}{4}$ by $\frac{3}{4}$ in. A vertical dado, running from the lower end to the first dado, is $7\frac{1}{4}$ in. from the front edge. Rabbet the projecting lower end $\frac{1}{4}$ by $\frac{3}{4}$ in. On the outer face two dados, $\frac{1}{4}$ by $\frac{3}{4}$ by $8\frac{3}{4}$ in., are cut, one 7 in. above the lower end, the other $8\frac{3}{4}$ in. above the first. A third, full width of the narrow upper end, is $10\frac{1}{2}$ in. above the second.

The long left side (left-hand piece A, Fig. 6) is 1 ft. $4\frac{3}{4}$ in. by 3 ft. 5 in. The inner-face dados correspond to those of the other side, as does the lower rabbet

Modern Bookcase

by

E.M. Love

3607 Louisiana St.
San Diego
Calif.

and notch. A fourth horizontal dado corresponds to the upper rabbet of the other side. The upper end is rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in. Between the two upper dados cut out a rectangle, $8\frac{3}{4}$ in. wide, and rabbet all around this $\frac{1}{2}$ by $\frac{3}{4}$ in. Cut a $\frac{3}{4}$ -in. strip off the back edge from the bottom to a point 1 ft. $6\frac{1}{2}$ in. above, and rabbet the rest $\frac{1}{2}$ by $\frac{3}{4}$ in. A $\frac{1}{4}$ by $\frac{3}{4}$ -in. dado extends from the upper horizontal dado to the top rabbet, as in Fig. 6. Two dados, $\frac{1}{4}$ by $\frac{3}{4}$ by $7\frac{1}{4}$ in., on the outside at the back, one $7\frac{1}{2}$ in. above the lower end, the other $9\frac{1}{4}$ in. above it, carry the small side shelves.

Make the top (A in Fig. 5) $10\frac{3}{4}$ by $16\frac{3}{4}$ in. Rabbet the back edge on the underside $\frac{1}{2}$ by $\frac{3}{4}$ in., and saw a strip off the right side, $\frac{1}{4}$ in. wide, for a distance of 8 in. from the front. The shelf below (K) is $10\frac{1}{2}$ in. by 1 ft. $3\frac{3}{4}$ in., with a $\frac{1}{4}$ -in. strip off the left side, $7\frac{3}{4}$ in. long. The next shelf down is the same, except that a $\frac{1}{4}$ -in. strip, 8 in. long, is removed from the right edge, starting from the back. The following two shelves are $10\frac{1}{2}$ in. by 1 ft. 4 in. The bottom shelf is L-shaped, $18\frac{1}{4}$ in. wide at the back, 1 ft. 4 in. from the front to the back, and 10 in. wide in front. It fits both the middle and the right compartments.

The three partitions are next made. The upper one, between the top and the first shelf down, is $6\frac{1}{2}$ in. high and $10\frac{3}{4}$ in.

wide. The middle one, just below it, is $8\frac{1}{4}$ in. high and $10\frac{3}{4}$ in. wide. The one below this is $8\frac{1}{4}$ in. high and $10\frac{1}{2}$ in. wide, while the lowest is $12\frac{1}{2}$ by $10\frac{1}{2}$ in.

At this stage it is well to assemble the parts so far as they are made, not only because it makes clearer the arrangement of the other pieces, but also because any small errors may be compensated for in making the rest. Assemble the sides with the shelves and partitions, nailing the butted upper and lower edges of the partitions, and add the back.

The top of the right wing, 8 by $9\frac{1}{2}$ in., is rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in. on the underside

at the back. The front section fitting with it is $7\frac{3}{4}$ by 12 in., rabbeted at the upper and lower edges. It makes a butt joint with the long side, while the top piece fits into a dado. The shelf below is $7\frac{3}{4}$ by $8\frac{1}{2}$ in., and the sidepiece fitting against it is $9\frac{1}{2}$ by $8\frac{3}{4}$ in., rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in. at the top and bottom. In addition, the front edge is notched back $\frac{1}{4}$ in. to fit into the rabbets of the front pieces. The next shelf is also $7\frac{3}{4}$ by $8\frac{1}{2}$ in., and the lower front part is $7\frac{3}{4}$ by $8\frac{1}{2}$ in., rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in. at the top and $\frac{1}{4}$ by $\frac{3}{4}$ in. at the bottom.

The top of the left wing, detailed in Fig. 6, is $8\frac{1}{4}$ by 8 in., and rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in. at the back. The middle shelf is

8 by $7\frac{1}{4}$ in., and the lower is $8\frac{1}{4}$ by $7\frac{1}{4}$ in. The side is 8 by 19 in., with the upper end and back rabbeted $\frac{1}{2}$ by $\frac{3}{4}$ in., and the lower end $\frac{1}{4}$ by $\frac{3}{4}$ in. A $\frac{1}{4}$ by $\frac{3}{4}$ -in. dado across the inner face, 10 in. from the lower end, supports the middle shelf.

When assembled, plane off all projecting ends and scrape uneven inside places. A $\frac{1}{4}$ -in. strip of wood is glued into the open joint inside the right lower compartment.

It is difficult to hide the plies of the edges with paint, even though they are well sandpapered. The writer has found gesso to be the most satisfactory preparation for filling the plies. Smear on thickly, working well into the pores, and

A = $\frac{1}{2}$ x $\frac{3}{4}$ RABBIT B = $\frac{1}{4}$ x $\frac{3}{4}$ RABBIT C = $\frac{1}{2}$ x $\frac{3}{4}$ DADO D = BUTT JOINT E = NOTCH CORNERS TO FIT RABBIT

FIG. 5

FIG. 6

then rub off reasonably smooth with a putty knife. Allow it to dry for a day or so. Then carefully trim off lumps with a sharp chisel, smooth with No. 1/2 sandpaper, used on a flat block, and finish with fine grit.

Any open joints can also be filled with gesso; in fact, a pretty sorry-looking job of cabinetmaking can be made into a reasonably good surface for painting, and if the reader has had luck with the bookcase, either in the way of open joints or splintered veneer, he will do well to try filling the defects in this way before abandoning the project.

Sand off all corners to a radius of about

1/16 in. Give three or four coats of flat paint, all well sanded, before applying enamel. The case in the photograph was painted sage-green, and striped on the sides of the top nosing and the top of the heavy base member with orange. The tops of the steps of the nosing, and of the narrow member of the base, were made lavender.

Secure the top to the lower section with small iron strips on the back and a screw through the lower-section top into the bottom shelf of the upper section.

☛ A piece of rosin stirred into melted habbitt will make it run better.

Time and Labor-Saving Kinks

Upper Left, Two Stout Oak Posts Set Up in the Position of an Inverted "V," Hold Wire Fence Taut in Hollow; Upper Right, Block and Tackle, Passing through the Shed Roof and Attached to a High Support above the Shed, Facilitates Butchering of Large Animals, Which Are Hoisted with a Team of Horses

The Dairy Thermometer Can Be Protected against Breakage When Stored Away by Slipping It through Screweyes Located in a Groove Cut in a Piece of Log, the End of the Groove Forming a Support for the Instrument

Wagon Step Made from Pieces of 1-In. Wood, Bolted or Screwed Securely to Two Lengths of Flat Iron, Which Are Bent to the Shape Shown, Is Hooked onto the End Gate of a Wagon; It Has Been Found Especially Convenient for Huckstering and for Delivery Purposes; Being Removable, It Can Be Put Away When Not in Use

Device for Holding a Cordeau Spool While Loading Well Drill Holes; a Wooden Brake Is Provided to Stop the Revolving Spool, a Pointed Stick Being Used to Hold the Brake Down and Also to Punch Holes in Dynamite Cartridges

To Help Prevent Water in the Stock Tank from Freezing, Provide a Hinged Cover of 1-In. Wood; the Cover Should Be Sectional, Which Makes It Much Easier to Handle Than if It Is Built as a Single Large Piece

Wagon End Gate, Called a "Shoveling Board," Saves Labor When Unloading Corn with a Shovel, as the Work of Hoisting the Corn over the Gate Is Entirely Eliminated

Burning Gasoline on Putty Softens It, Thus Facilitating Its Removal

Fire Softens Putty on Sash

Here is a simple idea that greatly facilitates the job of removing old putty from window sash of which the pane is to be renewed. Get a small oilcan, of the kind in which a light grade of oil is sold, and fill it with gasoline. The hole in the spout of such a can is so small that the stream of gas can readily be controlled. First remove the old glass, then place the sash on a flat bench or table and squirt gasoline on the putty, being careful not to let it run over the wood part of the frame. See that all the windows and doors of the room in which this is done are closed so that there will be no draft. Ignite the gas on the putty with a match. The air coming from all four sides will cause the flame to rise toward the center of the sash, and hence will not scorch the frame. The heat causes the putty to become brown, and if enough gas is used, one burning is usually sufficient to soften the putty so that it can be removed. Do not let the putty cool off, as cooling hardens it.—B. R. Glatts, Weiser, Idaho.

Making Plastic Filler for Wood

The home mechanic can make a good plastic wood for filling holes, cracks, etc., by mixing sawdust, sifted to the desired fineness, or wood flour if obtainable, with any transparent brushing lacquer. After mixing, the filler should be kept in an air-tight container to prevent it from

hardening. However, if it should harden from exposure to air, it can be restored to working condition by adding more lacquer or lacquer thinner.—J. S. Hagans, Chicago, Ill.

Improvised Ratchet Wrench

With the aid of this improvised ratchet wrench, work can be assembled in a fraction of the time usually required. The wrench can be made by any machinist in an hour or so, and the details of construction are clearly shown in the drawing. The body is made of a piece of flat iron, drilled and equipped with pins at the points indicated. A handle, made of stock of the same thickness, is pivoted to the body by means of a screw. The nut holder is made from an ordinary hexagon nut, filed out square, and part of it is turned down on the outside to fit the hole drilled in the body loosely so that it can be turned easily. After the turned-down end of the nut is slipped through the hole in the body, a washer is placed on this end, which is then riveted over to hold both the nut and the washer in place. In the shop where this idea originated, each machinist has from two to five of these

Any Machinist Can Make This Simple Ratchet Wrench Which Saves Considerable Time

wrenches, varying in size to meet the needs of different jobs.

AT LAST A HOUSE IN IRISH STYLE

Copyright, Popular Mechanics

Plan No. 4-S-40

Here Is Something New—a Tabloid Plan: Studio Living Room, Attached Garage; House Can Grow as Your Purse Permits

WHY NOT a house in Irish style? Sounds interesting, doesn't it? Logical, too. We've borrowed style features from the Spanish, Dutch, English, Italians, Swiss and adapted them to American houses. Why should we longer neglect the fine traditions of the Emerald Isle?

Those sturdy thatched-roof houses of old Erin are in many ways as picturesque as the rambling half-timber cottages of Merrie England or the adobe houses of sunny Spain, topped with colorful tile and built around a patio.

In the little house above, the designers have merged a bit of old-world tang with a dash of American daring and produced a touch of originality—perhaps just those features of style and service at low cost you've been looking for and haven't found as yet. Certainly there's romance and atmosphere here a plenty. But that's not all. Aside from something new, stylistically speaking, the little

house offers you all the efficiency, comforts and conveniences of a roomy, yet reasonably small kitchenette apartment. In addition, the house may grow as your purse permits. In fact, you can make additions to the plan now if you wish.

The architects have given you a thatched roof with slight roll at the eaves, laid with variegated edge grain cedar shingles in brown and green; stucco exterior on metal lath with half-timber effect, reminiscent of old-world solid walls and plaster finish, and a rugged chimney of either fieldstone or brick, to add the external touch of solidity found in many an old Erin house. All of these features have been incorporated in a tabloid plan, and done so skillfully that you marvel at the roominess

and spacious effects in so small a house. Garage and house are all under one roof and can be placed on a lot as narrow as thirty-five feet.

Let's look over the plan and equipment. There's a

HOW TO GET THE PLANS

To help our readers get started on one of life's most glorious experiences—building and owning a home—Popular Mechanics Magazine will supply readers a one-sheet blueprint of the house here illustrated for \$2. This blueprint does away with the necessity of first purchasing a complete set of plans to find out whether you can afford to build. It contains floor plans, elevations, a section, detail, size of joists, studs, etc., and also a brief specification. Submit it to tradesmen and dealers for building estimates.

still available. 12/13/33 703

FIRST-FLOOR PLAN

studio-type living room with high ceiling and rafters exposed. A "Romeo and Juliet" balcony opens from the second-floor sleeping room and overlooks the living room below. An open stairway to the second floor is a feature. Next to the fireplace is a bed closet. This may be used for emergency purposes or, if the family is small, it may serve as permanent sleeping equipment. A toilet on the first floor, always a convenient feature, makes the first floor really quite a complete bungalow as far as equipment is concerned.

Notice that the dining-room floor level is raised one step above the living-room level. That's a touch of individuality. A porch may be built to the rear of the dining room. China cabinets flank a spacious window overlooking either garden or terrace. No doubt the full-mullioned window will prove a joy to housewives who appreciate the decorative possibilities of such a feature along with the flood of sunshine it provides.

The second-floor bedroom is planned for picturesque effects. A vanity alcove between the two closets will please the ladies. Opening from the upper hall, there is a door leading to the deck or roof of the garage. By stretching an awning over the deck, this space may be used for

living or sleeping purposes in summer. In fact, a second permanent bedroom may be added to this deck now if you wish one.

SECOND-FLOOR PLAN

This is a basementless house because it saves fifteen per cent on the cost. A basement may be had if you want one. Notice how the first-floor heater, placed in the rear hall, is served with fuel through a wall opening beneath the stairs. Fuel is stored off the garage under the stairs. The house is of frame construction and fully insulated. Interior finish may be of large surfaced insulation boards or wallboards treated with plastic paint or decorated to suit your taste. This means a saving over lath and plaster.

Summed up, you have in this little house every modern, practical space-saving feature along with a high degree of comfort and a large measure of style. You have it all at very reasonable cost. Recent Chicago estimates say \$5,300 will build the house complete. Chicago prices range from ten to twenty-five per cent higher than prices in many other localities.

EDITOR'S NOTE: Popular Mechanics Magazine has prepared a home plan book, "Twenty Popular Low Cost Homes and Ten Commandments for Home Builders." These are selected homes and show labor, space and timesaving ideas. They are \$5,000 homes and less. Send 10 cents in stamps to cover postage. Address Building Editor.

FOR THE GOOD MAN

Up or down is the same to "Yankee" No. 130-A Spiral Screw-driver. The live spring in handle keeps bit in screw-slot. You just push!

...mechanic
or amateur

"YANKEE" Tools are made for the mechanic who values his time and labor. They are made for every man who hates to take "all day" to do a job and who won't stand for tools that hold him back.

"Yankee" ingenuity appeals to man's own ingenuity. "Yankee" Tools inspire, encourage him... make him better by making his work easier, better, more interesting!

Only in tools marked with the name "Yankee" can you get "Yankee" ingenuity... "Yankee" durability... "Yankee" economy!

In the "Yankee" Spiral Ratchet Screw-driver, you find "Yankee" ingenuity at its best.

It is a spiral driver—right and left movement, driving or drawing screws simply by pressing on handle. It is a ratchet driver—likewise right or left. It is a rigid screw-driver; 13 inches long or 18 $\frac{1}{4}$ inches, just as you adjust it.

Spring in handle makes it the Quick-Return. Just push! Spring brings handle back for next push; keeps bit in screw-slot.

With a bit for small screws, another for medium screws and a third for large, it is *three different size* screw-drivers in each of these various ways of using the tool.

It also drills holes and countersinks the holes for the screw-heads.

No. 30-A—Standard Style.
Three bits.....\$3.00

No. 130-A—Quick Return.
Three bits.....\$3.45

Made also in Heavy and Light patterns.

Eight "Yankee" Drill-points for boring holes $\frac{1}{16}$ " to $\frac{11}{64}$ ", with special chuck for holding the drills, are to be had for this screw-driver. Also countersink fitting into tool same as screw-bits.

"YANKEE" TOOLS

MAKE BETTER MECHANICS

NORTH BROS. MFG. CO., Lehigh Ave., Philadelphia, U. S. A.

- 6—Disston Steel
—stays sharp longer

THE Saw Most Carpenters Use now comes to you in new models, improved in every feature.

These new Disston Hand Saws will run with less set . . . cut faster . . . cut easier . . . stay sharp longer, than any other hand saws ever made.

They are *lighter*, with blades *thinner*, yet *stiff*, always the goal of saw makers, first achieved by Disston. Made possible only by Disston Steel and Disston True-Taper Grinding. And you

know this: *The thinner a blade is, if it is stiff, the better it cuts and the easier it is to use.*

Never until now could you get blades so thin, so stiff, so light, to cut so fast and run so true.

Weatherproof handles of new design, with larger handholes, give a more comfortable grip, with perfect balance and new ease in using.

Whatever style of saw you want, you will find it in the new line of Disston Hand Saws at your hardware store.

Get "The Disston Saw, Tool and File Book"

An illustrated manual on the selection, care and use of tools. Tells how to file and set saws, with much other helpful information. The coupon will bring it.

The new Disston D-8 Lightweight Saw weighs only 1 lb., 7 oz. in 26-inch length. Less weight to push; less work for you. Thinner, yet stiff, it cuts faster and easier, like all the fourteen other hand saws in the new Disston line.

Good tools and correct tools are required for good work. These are some of the Disston Tools needed in the home shop.

No. 4 Back Saw—Handiest of all small saws. Fine teeth and stiff back enable you to do the smooth, even cutting that is so necessary for accurate work in cabinet making, etc. Can be used in mitre box. The 12-inch size, 3 inches under back, with teeth 14 points to inch, is most popular. \$3.00.

No. 68 Dovetail Saw—Used in pattern and cabinet making where extra thin saw with fine teeth is needed. Eight-inch blade, 17 points to inch, is most popular. \$1.60.

D-3 Filing Guide and Clamp—Enables any one to sharpen saws correctly, filing each tooth at the same angle. Adjustable for both rip and cross-cut saws. Complete with directions. \$6.50.

No. 28 Triumph Saw Set—

Gives perfect set on hand saws, back saws, web saws, band saws, etc. 10 points to the inch or coarser. The most efficient tool for the purpose. \$1.50.

Disston Files—File your saws with Disston Special Extra-Slim Blunt Saw Files. Special teeth, cut better; parallel sides; extra-slim; Disston-made steel. 5-inch, 20c; 6 1/4-inch, 20c; 6-inch, 25c; 7-inch, 30c. There is a Disston File for every purpose.

A-10 Lightweight Pocket Level—Lightest and handiest level. Made of airplane aluminum; cannot rust. Weight only two ounces; length nine inches. Etched lines on level and two plumb glasses are proved accurate. \$1.25.

Non-stop feet for hard hops

We can't offer you anything as adventurous as Lindy's non-stop hop to Paris, but we can offer you the shoes that champions wear—Keds—the greatest sports and play shoes ever made for non-stop, hard-playing feet. With Keds on your feet, you can take off for tennis or other sport excursions, confident of fast, sure footwork.

Keds are extra fine sports shoes—much better than ordinary "sneakers." Each pair of Keds is made over a special foot-health last—and Keds' tough safety-soles are specially designed to grip the smoothest surfaces, and to absorb the roughest shocks.

With Keds on your feet you can take turns on one foot and not skid. You can lace Keds tight, too—so your feet can't rub and chafe.

Keds offer the most complete line of mod-

els for every indoor sport and outdoor activity, and are made by the world's largest specialists in canvas rubber-soled footwear. You'll find Keds in the best shoe stores in town—at all prices, too, from \$1.00, \$1.25, \$1.50, \$1.75 up to \$4.00.

Keds—Keds—Keds—Look for that name stamped on all genuine Keds.

Keds

REG. U.S. PAT. OFF.

United States

Rubber Company

The more you pay, the more you get—
but full value whatever you spend.

Keds Big Leaguer

Just as the name implies—a Big Leaguer sports shoe for hard-playing boys. Special safety-sole lets you take turns on one foot. Tough tan toe strip protects against scuffing. "Feltex" insole. Eyelets that won't pull out. A Big Time shoe in every respect.

Keds Mercury

The winner in the popular priced field and a wonderful shoe for the money. Tough amber colored sole. Black athletic trimmings and ankle patch. Nickel eyelets. "Feltex" insole. If you're looking for an exceptional value at the price, ask your dealer to show you Mercury.

Chosen by experts and champions everywhere

The Official Headquarters selected the Plumb Scout Axe as an Official Scout Axe of the organization.

The Garage Man says—

"The off-center head of the Plumb Ball Pein gives me the power I need on heavy work. Yet the tool is so finely balanced I can use it where a false blow would do lots of damage."

GEORGE BREYER, Phila.

The World Champion

Chopper says—

"I give the Plumb Axe the credit for victory in many of my chopping contests. That axe saves me one minute in a five-minute chop."

PETER McLAREN

The Carpenter says—

"My Plumb Nail Hammer fits my hand like a glove. That broad face never misses a nail. Those 'nipper' claws pull anything. It's just the kind of a hammer I would reach for if there were a dozen others around."

DANIEL S. SCHOENER, Glenside, Pa.

You, too, can do better work with these finer **PLUMB** Tools

Wage craftsmen deal with logical facts. Their time and ability are turned into money with tools.

The price of a tool means nothing. It's the grip...the feel...the performance of the tool that counts.

Carpenters, mechanics, machinists: Their verdict is... "Quality Tools." Many add "I use Plumb."

Or take that famous Champion Chopper, Peter McLaren: His reputation is staked on the blade of his axe. He uses only Plumb.

Or that tremendous organization, The Boy Scouts of America: When selecting a Scout Axe to adopt as Official—they picked Plumb.

Experts and champions everywhere use Plumb Tools! You, too, can do better work, with these finer tools.

Drive a nail with a Plumb. Or pull the slimmest brad, even though it has no head.

Or the hatchet. Sink the blade deep, or slice a shaving.

The Ball Pein for heavy duty; the Plumb Axe for your chopping; the Plumb Official Scout Axe as a handy tool for garage or cellar.

Every one a fine tool. Fine in design, in balance and in finish.

And every Plumb has a safety feature that no other tool contains! When a Plumb Handle loos-

ens (as all handles do) you just turn the patent screw to tighten it again.

Ask your hardware man to show you Plumb Tools. The Red Handle and Black Head will identify them for you.

The Foreman Builder says—

"I've never seen a steel blade that bites into the wood, or that holds its edge like my Plumb Hatchet."

AL. MOLLENKOF, Willow Grove, Pa.

FAYETTE R. PLUMB, Inc., Philadelphia, U. S. A.

C & L 32

This is one of the most popular blow-torches we have ever made. It is more expensive than the 158 because it is made for much harder use. It is designed for the man who uses a blow-torch in his daily business and demands not only excellent performance but rugged ability to stand rough handling. 32 contains the most advanced patented C & L blow-torch improvements. It has a red handle with a gold stripe. Sure sign of satisfaction.

**You're
investing
in better and longer
performance when
you buy a
Clayton & Lambert**

AN EXPANDED gas orifice makes a blow-torch a piece of junk. And it's the easiest thing in the world to enlarge the orifice in an ordinary torch. But a No. 32 Clayton & Lambert blow-torch has an orifice that *can't be enlarged*—no matter how carelessly or how tight you close the valve. It's a patented Clayton & Lambert improvement—one reason why you get longer service when you buy a Clayton & Lambert.

In addition to being non-spreading, the orifice will not clog. As you close down the valve the carbon cleans out automatically. The improved orifice is but one of many Clayton & Lambert advancements. Every bit of mechanism is designed to give you quicker, better action. Inside and out, a Clayton & Lambert is built for long, strenuous use. Where a hard bump might occur, a Clayton & Lambert is reinforced.

C & L 158

This blow-torch is especially made and priced for the man who likes to do odd jobs around the house, or to tinker with mechanical things. It will last a lifetime if it is not abused. The usual retail price is about five dollars.

Wherever extra protection should be—you'll find it in Clayton & Lambert.

As an example, all Clayton & Lamberts are made *non-explosive* by a patented method of building the fittings into the tank. The vaporizing chamber is another Clayton & Lambert feature. Its special vein system gives you quicker heat—more heat—and cuts down your fuel bills. You can't see these things which Clayton & Lambert have done to give you the blow-torch you want. They're inside—in the "works," the important part of a torch. But they're there—along with numerous other refinements. They account for superior performance and durability. And that's why Clayton & Lamberts are the most popular torches in the world.

You'll know a Clayton & Lambert by the red handle with a gold stripe. Insist that your blow-torch has that handle—and you'll get your greatest money's worth. At hardware, electrical and automobile accessory stores.

CLAYTON & LAMBERT

MANUFACTURING Co., Detroit, Mich.

Did you ever see a picture of a "KNOCK"?

© E. G. C. 1929

THAT sounds peculiar, doesn't it? Yet we can get a perfectly good picture of the "knock" in an engine. Those two curious looking diagrams were taken with a Midgley Indicator and show the pressures inside the cylinder of a gasoline engine.

The one on the left is the pressure diagram of a normally operating engine, while the one on the right shows a "knocking" engine. So the "knock" really is the part that looks like saw teeth.

These diagrams were most important. Through them, the scientists in the General Motors Research Laboratories discovered that it was the *fuel* that "knocked"—not the engine. This fact established, they developed Ethyl fluid, whose active anti-knock ingredient is tetraethyl lead.

The end of the long research resulted in Ethyl Gasoline's being put on the market

This is what happens in the cylinders of a gasoline engine when it is running smoothly. The pressure gradually increases after ignition until the mixture is nearly all burned. Then it grows less and less.

But when the gasoline is causing the engine to knock, just see what happens. Is it any wonder that the engine loses power? Ethyl Gasoline prevents that jagged saw-tooth.

by leading oil companies. It encouraged automobile manufacturers to bring out the present high compression engines and to give the motoring public a new kind of motoring comfort and efficiency. It is called *high compression performance*.

The millions of cars of ordinary compression run better on Ethyl too—for by the elimination of "knock" they develop more power and flexibility.

Ride with Ethyl today.

ETHYL GASOLINE

Knocks out that "knock"

Better Workmen -- Better Tools

The good workman of today who takes pride in his tools has replaced the workman of the old adage who blamed poor work on his tools.

Present day production sets such a premium upon speed and accuracy that only the worker with reliable, well-made tools can stand the pace.

The Brown & Sharpe Die Maker's Square (No. 552) shown in the illustration is provided with straight or off-set blade. Its handy design gives it countless uses for measuring drafts, tapers, etc. This and 2300 other fine tools are described in Small Tool Catalog. Your hardware dealer will supply you with a copy, or you can get one free from us. Address Dept. P.M., Brown & Sharpe Mfg. Co., Providence, R. I., U. S. A.

A Complete Line of Planes by Millers Falls

MILLERS FALLS PLANES are built around the cutting edge. A new process of electrically tempering the steel has produced a cutter that lasts longer and holds a finer edge.

3-point bearing

Another New Feature

Next the designers tackled chattering. Now a 3-point bearing of lever cap makes possible hair breadth adjustment that holds the blade at the correct cutting angle and overcomes chatter.

Practical carpenters, cabinet makers, men who love good tools for home shop work—anyone who uses a plane will delight in the balance, comfortable grip and smooth cutting efficiency of Millers Falls planes. Sizes in bench planes from 7 inches to 24 inches, smooth and corrugated bottoms, and 21 models of block planes, cover every plane need.

Sold by
Responsible Dealers

Millers Falls Planes will be found in the stores of leading hardware merchants.

What's all the shouting about?

IT WAS a simple enough hunch — that a lot of pipe lovers secretly craved a milder mixture than they'd been smoking. We gave it to them — literally — a free tin to every man who asked for it. And now so many tobacco connoisseurs are cheering for Sir Walter that we can scarcely make enough of it. Isn't it time you too discovered how good a pipe can be?

LIMITED OFFER (for the United States only)

If your favorite tobacconist does not carry Sir Walter Raleigh, send us his name and address. In return for this courtesy, we'll be delighted to send you without charge a full-size tin of this milder pipe mixture.

Dept. 177, Brown and Williamson Tobacco Corporation, Louisville, Kentucky

The story of a typewriter that went to war

By a War Correspondent

IT was in July, 1916. The commander of the British Flying Headquarters at Saint-Omer took me for a flight over the lines.

Holding my Corona between my knees I wrote the first description of the front ever typed from the air. During a cruise in a British submarine I typed a complete magazine story while we were nosing about off Heligoland, a hundred feet beneath the surface. A description of the first Zeppelin raid over London I typed at a shattered window by the light of the fires from incendiary bombs.

Throughout my entire period at the front, all my writing was done on my Corona. Because of its portability and dependability, I made it a constant companion.

Many a story banged off hot in a front-line dugout would never have been written if I had waited to reach a spot of greater convenience.

The final year of the war I was

afloat. My Corona saw service on mine-sweepers, destroyers, battleships, and battle cruisers. It recorded the sinking of three U-boats and the surrender of the German fleet.

During my war-time work in Europe I typed an average of 15,000 words a week. In addition to this I typed the manuscript of four books. Yet, in spite of a number of emergency repairs made necessary by violent accidents, my Corona was still in highly serviceable condition when I arrived back in New York in 1919.

* * *

The above is only one of many astonishing Corona stories. We have received thousands of letters from Corona owners, telling about the strange and terrible hardships which Corona has gone through.

A few of the exciting incidents described in these letters are as follows: How a Corona was struck by lightning. How a Corona

fell out of an aeroplane. How a Corona was thrown from a hotel window. How a Corona was retrieved from the sea by a pearl diver. How a Corona went through a Texas sandstorm. In every case Corona survived in serviceable condition.

You owe it to yourself to drop into a store where typewriters are sold and see why Corona is the Champion Portable. The minute you lay eyes on it you will realize why a million people use it—why Roosevelt took one to Africa—why 30,000 Coronas were used in the World War—why more novelists, more newspaper men, more business men, more students in schools and colleges use Corona than all other portables put together.

For a small down payment you can take a beautiful new Corona home with you today. Don't neglect this opportunity. Don't let another day pass without doing something about it. Know *now* the joy of owning a sturdy, speedy, smooth-operating Corona—the Champion Portable Typewriter of the World.

An interesting illustrated booklet called "Corona Typewriters," which describes Corona in detail and contains beautiful illustrations of the new color models, will be sent you upon request. No obligation. Simply mail the coupon below.

Every kind of woodworking operation

Make everything out of wood with the famous

WORKACE

Electric

WOODWORKER

Amazing low price includes everything

This complete all-electric shop costs less than most other outfits and gives you the **biggest value per dollar!** You can prove it at home by actually using the Workace in every kind of woodworking operation, making furniture or other useful and decorative things for your own home and to sell at a handsome profit. The Workace is fast, accurate and easy to work with. Planing, sawing, turning, drilling, grinding, sanding or buffing—you save time on every operation, do better, cleaner work, too!

There's ample power, strength and capacity in The Workace Woodworker to do any job quickly and economically . . . mitering, tapering, rabbeting, beveling, slotting, cross-cutting, ripping—anything! Every unit works from the G. E. motor. All parts are sturdy and well fashioned. The regular Wallace UNQUALIFIED GUARANTEE assures replacement of defective parts for one year. This is a simple straightforward offer—no exaggeration, no red tape—just plain facts that you yourself can prove. If you want to make woodworking your real hobby—or a real source of income—send this coupon for all details of this unusual proposition.

Buy Results

You don't buy tools . . . you buy Service. You buy the things that tools will do for you!

. . . and that's why "It Pays to Say Pexto" next time you're after tools. Because Pexto tools are built to Serve for years.

You know it's a case of beauty being more than skin deep, too, . . . they not only look good when you see them at the hardware store, but they're as full of value as only a 110 year old manufacturer can make them.

You'd be interested in looking over booklet "M", which we'll be glad to send you. There are:

Hammers
Screw Drivers
Braces

Pruning Shears
Pliers
Snips

Squares
Wrenches
Chisels

and a host of others.

They use Starrett Tools wherever things have got to be right

TAKING down a "Whirlwind" or a "Wasp" for major overhaul comes only at twenty, even thirty thousand mile intervals. When it is done, it is done with a thoroughness that has for its basis the heavy responsibility of assuring unfaltering performance.

Aircraft motor manufacturers and transport operators alike rely on the accuracy and dependability of Starrett Tools.

You, too, want Starrett accuracy and dependability, no matter whether you use tools for serious work or as a hobby.

You're not satisfied with anything but the best.

Whenever you buy a precision tool, hacksaw or steel tape, see that it bears the Starrett name. Your dealer will gladly show you genuine Starretts.

Let us mail you a free copy of the great Starrett Catalog No. 24AP illustrating and describing more than 2500 Starrett Tools.

ATKINS SILVER STEEL SAWS

ATKINS No. 400 HAND SAW SHIP POINT

Piñest saw made. Silver Steel, Ship Point blade. Perfection handle.

ATKINS JUNIOR MECHANIC HAND SAW

Handy, high-grade saw for boys or men. 20 in. polished blade.

ATKINS No. 2 BACK SAW

Rigid Silver Steel blade. Apple wood handle. 8 to 18 in. lengths.

ATKINS No. 3 NEST OF SAWS

Adjustable handle with compass, keyhole and metal-cutting blades.

ATKINS No. 10 HACK SAW

Nickel steel adjustable frame. Non-Breakable or Silver Steel blades.

For Your Workshop

The way ATKINS "Silver Steel" Saws cut wood or metal—faster, easier, better—gives a real thrill to thousands of home-craftsmen, who "make things" for pleasure or profit.

Make ATKINS Saws your choice when you start a home workshop, or add new tools. Remember, only in ATKINS Saws do you get the world-famous "Silver Steel" which takes a sharper cutting edge, holds it longer, and outlasts two or three ordinary saws.

Ask your Hardware Dealer, or write us about the saws you need.

Saw Booklets Sent FREE

"Saws in The Home" is full of suggestions for home-craftsmen. "Saw Sense" tells about saws and their care.

E. C. ATKINS & CO., Est. 1857

SIMONDS CIRCULAR SAWS for the home workshop

**Cut Easier
Stay Sharp Longer**

WHEN you use Simonds Circular Saws in your home workshop, you get the same dependable service—the same perfection of workmanship—that characterizes the Simonds Saws used by leading industrial plants all over the country.

Because Simonds Small Circular Saws are made from specially tempered steel, they cut more smoothly and keep their cutting edges longer than any other saw you can buy. They are fast cutting and accurate. The teeth are uniform and perfectly aligned. Simonds Circular Saws are regularly supplied with several leading makes of portable rigs and home outfits.

For the satisfaction that comes from using cutting tools of the highest quality, insist on Simonds Saws. The name Simonds is your guarantee of perfect workmanship.

Simonds Small Circular Saws are made in sizes to fit all portable and other types of electric sawing outfits. If your dealer can't supply you, we'll gladly forward you any of the Circular Saws described below upon receipt of listed price.

Is It
Level?

Is It
Plumb?

Six Proved Glasses To Answer These Questions

Stanley Aluminum Levels are fitted with six proved glasses. No matter how you pick up the tool, one of these

glasses is always visible—instantly available to level or to plumb.

Made of aluminum, these levels combine light weight and great strength and will not rust or warp.

The tops and bottoms are milled and ground to insure perfectly parallel surfaces. Heavy glass covers protect the openings for both level and plumb glasses, preventing damage to the glasses and keeping out dirt.

Complete description of Stanley Aluminum Levels is given in the Stanley Tool Catalog No. 34d. Send for a copy of this catalog showing the complete line.

PATENT

Protect Your Ideas

Take the First Step Today

If you have a useful, practical, novel idea for any new article or for an improvement on an old one, you should communicate with a competent Registered Patent Attorney AT ONCE. Every year thousands of applications for patents are filed in the U. S. Patent Office. Frequently two or more applications are made for the same or substantially the same idea (even though the inventors may live in different sections of the country and be entirely unknown to one another). In such a case, the burden of proof rests upon the last application filed. Delays of even a few days in filing the application sometimes mean the loss of a patent. So lose no time. Get in touch with me at once by mailing the coupon on the opposite page.

Prompt, Careful, Efficient Service

This large, experienced organization devotes its entire time and attention to patent and trade mark cases. Our offices are directly across the street from the U. S. Patent Office. We understand the technicalities of patent law. We know the rules and requirements of the Patent Office. We can proceed in the quickest, safest and best ways in preparing an application for a patent covering your idea. Our success has been built on the strength of careful, efficient, satisfactory service to inventors and trademark owners located in every state in the Union.

NO CHARGE for Information On How to Proceed

The booklet shown here contains valuable information relating to patent procedure that every inventor should have. And with it I will also send you my "Record of Invention" form on which you can sketch your idea and establish its date before a witness. Such evidence may later prove valuable to you. Simply mail the coupon and I will send you the booklet, and the "Record of Invention" form, together with detailed information on how to proceed and the costs involved. Do this NOW. No need to lose a minute's time. The coupon will bring you complete information entirely without charge or obligation.

DELAYS ARE DANGEROUS IN PATENT MATTERS

IMPORTANT! To Avoid Delay!

YOU SHOULD HAVE YOUR CASE MADE SPECIAL IN OUR OFFICE to save correspondence, secure protection and early filing date in the Patent Office. To secure special preparation of your case send \$25.00 on account with model or sketch and description of invention.

ACT NOW—Often two or more inventors file applications for practically the same idea. In such cases the burden of proof rests upon the last application filed. Therefore, delays often cause the loss of a patent.

MAIN OFFICE, VICTOR J. EVANS & CO.—VICTOR BUILDING, WASHINGTON, D. C.

Our Large, Comprehensive Organization has been established for 30 years and offers Prompt, Efficient and Personal Service by experienced Patent Lawyers and Draftsmen. Every case is in charge of a Specialist who has been selected for his knowledge and experience in certain lines of invention. Our Large practice in all U. S. Courts and defend clients in suits involving Patents, Trademarks and Copyrights. All Communications and Data strictly Secret and Confidential. We shall be glad to answer any questions in regard to Patents, Trademarks or Copyrights without charge or obligation.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS

Milk
of Magnesia

ONE CENT A DAY PAYS \$100 A MONTH

The Postal Life & Casualty Insurance Co., 1025 Moriarity Bldg., Kansas City, Mo., is issuing a new accident policy that pays up to \$100 a month and costs less than 1c a day—\$3.50 a year. Couldn't Play a Note—Now Makes

\$100 a week

"When I sent for your catalog, I didn't know a note of music. A few months after I bought my Wurlitzer instrument, I had taken my place in a professional orchestra. Now I am making \$100 a week, three times what I made as clerk. I wish everybody knew how easy it is—anyone who can whistle a tune can learn to play a musical instrument."

—Bill Carola

Free Trial Easy Payments

You may now have any Wurlitzer instrument for an ample free trial in your own home. Examine the instrument, note the fine workmanship, the full, rich tone value and especially how easy it is to play. No obligation to buy—no expense for the trial. We make this liberal offer because we want you to try for yourself a genuine Wurlitzer instrument, the result of 200 years' experience in musical instrument building.

Easy payments are arranged to suit your convenience. This is your opportunity to try a famous Wurlitzer instrument in your own home. Send for

Free Book

Illustrates and describes every known musical instrument—more than 3000 articles, many of them shown in full colors. All genuine Wurlitzer instruments—buy direct from Wurlitzer and save money. Special offers on complete outfits.

We also give you our Free Trial, Easy Payment Plan. No obligation.

It is always safe to give a Bayer tablet; there is not the slightest harm in genuine Aspirin. You have the doctor's assurance that it doesn't affect the heart. And you probably know from experience that Bayer Aspirin does banish all sorts of pain in short order. Instant relief for headaches; neuralgia, neuritis. Rheumatism, too. Nothing like it for breaking up a cold. At all druggists, with proven directions enclosed.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

SCOTT-BANSBACH MACHINERY CO.
130 So. Clinton St., Dept. 108, CHICAGO, ILL.

The ROSE TREE OF CHINA (*Prunus Triloba*) is the most beautiful and showy of all small trees. It begins to bloom before the leaves appear in the spring, being literally covered with very double rose-like pink flowers. As an ornament from early spring until late fall it has few equals. This symmetrically formed, graceful little tree grows usually to a height of but 8 feet, and is attractive as a specimen or when planted in groups or shrub border. It is hardy and easily grown, and no lawn is so small that room cannot be found for at least one of these wonderful trees. Many who have seen it declare it to be the most beautiful tree they have ever seen. The rose-like blossoms make fine cut flowers.

Choice trees for \$1.00 each; 3 for \$2.50, by parcel post, postpaid.

SPECIAL For 50c extra we will include three small **TULIP TREES**—fine ornamental shade trees with tulip-like flowers.

Our stock of trees will not last long at these low prices. Order now, and state when you want trees shipped. CATALOG FREE. **BURGESS SEED & PLANT CO., 421 T. R., GALESBURG, MICHIGAN.**

KUEMPEL COMPANY, 107 Kuempel Bldg., GUTTENBERG, IOWA

Kills Glare of Bright Lights

The amazing new Liberty Glare Shield actually does the job of keeping the glare off your eyes so that it is as safe to drive at night as in the day. It is adjustable to all angles and in touch of the finger operates it. Gives perfect protection against the sun as well as bright lights. When not in use it can be folded up against the roof of the car. It is scientifically shaped and placed. Statistics show that thousands have lost their lives in auto accidents due to glaring headlights. The Liberty Glare Shield banishes this danger and makes driving a safe pleasure.

\$5.00 AN HOUR TO MEN WHO WILL HELP INTRODUCE IT

Men are needed in every locality to take care of local business. The money-making possibilities are tremendous. Every car owner is a prospect. Full time or part time workers will find this the biggest money maker they ever handled. Sales experience is absolutely unnecessary. The Liberty Glare Shield and our sales instructions do the selling for you.

FREE SAMPLE OFFER

Our workers are furnished with a Liberty Glare Shield for their own car so that they will be able to make demonstrations. Send for full particulars of our sales program and free offer.

"Lava-clean" hands are clean!

Men—you who love to tinker—here's just the soap you need. Cleans quickly and thoroughly the toughest-looking pair of hands that ever fussed around a work bench. Makes more lather in 15 seconds than ordinary soap in 60, and even hard or cold water won't discourage it. Millions use it. "Good old Lava," they call it. Gets hands *clean*. Not just "surface clean," but clean 'way down deep. As easy on your hands as fur-lined gloves—because it's made from the finest of vegetable oils. All grocers sell it.

Full size cake of Lava Soap **FREE!**

1,000 Hotel Positions Open!

HOTELS, restaurants, clubs, apartments, hospitals, institutions, schools and colleges everywhere need trained men and women. Over 70,000 high-class positions paying \$2,500 to \$10,000 a year open annually in the hotels of the United States. Nearly one and three-quarter billions of dollars' worth of NEW HOTELS, CLUBS AND INSTITUTIONS being built this year will need over 200,000 trained men and women. Hotels start you at salaries up to \$3,500 a year, with living usually included. At any time there are over 1,000 hotel positions open.

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. Thru our Simplified Study Plan we give you the valuable knowledge that it has taken some of the most successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. Past experience absolutely unnecessary. A common school education is all you need.

We train you in your spare time and put you in touch with big opportunities. All of your training under the personal supervision of Clifford Lewis, who has been appointed Managing Consultant by over 300 hotels throughout the United States. Our students employed by leading hotels everywhere.

Send coupon today for Free Book, "Your Big Opportunity," showing how we can train you for one of these splendid positions, and explaining our Money-Back Agreement.

Where's the can of PLASTIC WOOD?

(Reg. U. S. Pat. Off.)

What if a fixture has pulled out—and towel racks, glass holders, and other fixtures set in tile do come loose?—it is easy enough to fix them permanently with Plastic Wood. Just clean the hole to remove loose plaster, wood, or dirt and fill it up with Plastic Wood—the amazing household product that handles like putty and hardens into solid wood. Then, when hard, screw the fixture back in place—or, if it has no screws, “set” it while the Plastic Wood is still soft.

It comes in two forms—Plastic Wood, of natural wood color, and White Waterproof Tile Cement, which dries to a hard flat white, and is particularly useful around loose tiles and other places in a tiled bathroom where a white finish is desired.

Plastic Wood Solvent

When working with Plastic Wood, keep a can of Plastic Wood Solvent on hand to soften it if it hardens too rapidly, to thin it if necessary, and to clean the hands and tools after using. In 25 and 50 cent cans.

ADDISON-LESLIE CO., 414 Bolivar St., Canton, Mass.

An Opportunity for Young Men

An old, established firm offers a chance to sell a standard product, and grow

Only one class of men will be interested in this advertisement. These are the young men,—perhaps in their twenties and fresh from college,—who are wondering what line of business to enter. Or the young fellows who now have an inside position and want to get out in the selling game to broaden themselves both in income and experience.

In short, they are the class of men who are willing to work and learn and build their future with us. And to such men we wish to tell our story.

The John B. Wiggins Company has, in the past seventy years, developed a national business in all forms of copper- and steel-plate engraving. Most of this has been carried on up to the present time by mail. But now we desire to establish direct representation and to engage a few clean-cut young men who will be a credit to us. We prefer that they be in their twenties, and sufficiently well educated to be able to converse intelligently. Each will be assigned to a certain district in his locality. Here he will contact prospective customers and show them, from the beautiful book of actual engraved samples, our complete line.

Experience is unnecessary; we would prefer to teach the men we select our own way of selling our quality product. Their remuneration will be on a commission basis.

Each will be given an opportunity to advance and connect himself permanently with this firm.

Reply by letter only, please. If you are such a young man, we would be glad to have a letter directly from you mentioning as a reference some prominent business acquaintance.

Shielded-Filtered

New! "AERO-CALL" SHORT WAVE CONVERTER

Factory-Built, Ready to Plug Into Your Present Radio Set

The Aero 1929 Converter is a compact factory-built short-wave adapter equipped with special short-wave coils. It is designed for both A. C. and D. C. sets. Operates perfectly on all sets without motorboating, by an auxiliary filter system control. It can be plugged into any regular radio set. This amazing radio instrument now makes it possible for you to reach 'round the world—England, Germany, Holland, Australia, Panama, Java and many foreign stations are some that are tuned in regularly on short wave. Permits you to enjoy international programs and many others from coast-to-coast that your regular receiver cannot get. What a thrill it is to plug this into a tube socket on your regular set and instantly be in another world! No change or wiring required. All complete, ready to operate, tubes and coils hidden, no apparatus in sight, except the neat, golden brown, compact metal cabinet in crackle finish. Size, 9x5 1/4 x 2 3/4 in. The only converter we know of that really works on all sets. Two models—A. C. and D. C. Write for Catalog and literature, or send \$25 and name of your dealer. Model A, without tube, for A. C. sets \$25.00 Model B, without tube, for D. C. sets \$25.00 at leading dealers and jobbers

LUMINOUS PAINT

Make Your Watches, Clocks, Etc., Visible by Night

The very latest discovery in the scientific world. Hitherto, practically unobtainable except at an exorbitant price, we have at last succeeded in producing this remarkable LUMINOUS PAINT, which, applied to the surface of any article, emits a ray of white light, rendering it perfectly visible in the dark. **THE DARKER THE NIGHT, THE MORE BRILLIANT IT SHINES.** Quite simple to use. Anyone—you can do it. A little applied to the dial of your watch or clock will enable you to tell the time by night. You can coat the push buttons or switch plates of your electric lights, match boxes, and innumerable other articles; make your own Luminous Crockery, Luminous Roasties, etc. Small bottle, price 25c. Larger sizes, 50c and \$1 postpaid. **JOHNSON SMITH & CO., Dept. 836 RACINE, WIS.**

CIGARETTE MAKER

Roll your own and save money. Better and quicker; saves more than half. Use your favorite brand of tobacco. Nice, useful, handy. Pocket size, weighs 35 oz. Made entirely of metal, nickel plated. 25c. 3 for 65c postpaid anywhere.

GOOD LUCK RING

Very striking, quiet and unobtrusive. Silver finish; skull and crossbones design, two brilliant, flashing gems sparkle out of the eyes. Said to bring good luck. Only 25c postpaid.

Exploding Cigarettes

JUST LIKE ORDINARY CIGARETTES. BUT SUCH REAL STARTLERS! The box contains ten genuine cigarettes of excellent quality. They appear so real, but when each cigarette is about one-third smoked, the victim gets a very great surprise as it goes off with a loud BANG! A great mirth provoker yet entirely harmless. Price 25c box.

NOVELTY BADGES

Kissing Permit 10c. Two very novel metal badges, nickel plated, that you can wear, giving you fun out of all proportion to their trifling cost. 10c, each badge. 3 for 25c, or 75c per doz. postpaid anywhere.

MIDGET BIBLE

GREAT CURIOSITY Smallest Bible in the World. Size of a postage stamp. 200 Pages. Said to bring good luck to the owner. A genuine work of art. Never be seen to be appreciated. Make good money selling them to friends, church acquaintances, etc. PRICE 15c each. 3 for 40c, 12 for \$1.35, 100 for \$7.50. Also obtainable in Leather Binding, with gold edges. Price 50c each. 3 for \$1.25, \$4.50 per doz. Magnifying Glass for use with Midget Bible. 15c.

STAGE MONEY

With a bunch of these bills, it is easy for each person of limited means to appear prosperous by dashing a roll of these bills at the proper time and peeling off a genuine bill or two from the outside of the roll, the effect created will be found to be all that can be desired. Prices, postpaid: 40 Bills 20c, 120 for 50c, or \$3.50 thousand postpaid.

MAGIC NOSE FLUTE

The Magic Nose Flute, or Humannote, is a unique and novel musical instrument that is played with nose and mouth combined. There is just a little knack in playing it which, when once acquired after a little practice, will enable you to produce very sweet music that somewhat resembles a flute. There is no fingering, and once you have mastered it you can play all kinds of music with facility and ease. When played as an accompaniment to a piano or any other musical instrument, the effect is as charming as it is surprising.

JOHNSON SMITH & CO.

LOOK 35c LOOK

Wonderful instrument. Greatest thing yet. Nine separate articles in one. Everybody delighted with it. Odd, Curious and Interesting. Lots of pleasure as well as very useful. It is a double Microscope for examining the wonders of Nature. It is also an Opera Glass, a Stereoscope, a Burning Lens, a Reading Glass, a Telescope, a Compass, a pocket Mirror, and a Laryngoscope—for examining eye, ear, nose and throat. It is worth all the cost to locate even one painful cinder in the eye. Folds flat and fits the pocket. Something great—you need one. Don't miss it. Sent by mail. Only 35c or 3 for \$1.00. **JOHNSON SMITH & CO., DEPT. 836, RACINE, WIS.**

It is made in the shape of and looks like a regular Automatic Pistol. No one is likely to stop and ask you whether it is real or not. This is its likely to prove itself very handy in an emergency. On pressing the trigger it opens up, as shown in the illustration at the right, revealing nine most useful articles—Opera and Field Glass, Telescope, Mirror, Magnifying Glass and Burning Lens, Reading Glass, Sun Dial, Sun Compass, etc. In the handle of the revolver there is a place for various pocket necessities, such as First Aid Articles, Buttons, Pins, etc. The Pistol is of silver metal, blood finish, that can be carried fearlessly in pocket. PRICE \$1.00 postpaid.

Watch Charm \$1.75

Exact reproduction of a real pistol—actually does REAL BLANK CARTRIDGES of miniature size. Illustration is actual size. 1 1/4 inches long, with ring at end for attaching to watch chain. Loads like a regular pistol. Pull the trigger and it goes off with a loud bang. Pistol is break open type; illustration shows position for loading. Made entirely of high grade steel, nickel plated, netoon barrel, handomely engraved handles, complete in box with cleaning rod. PRICE \$1.75. Also furnished with pearl handles, \$2.50. BLANK CARTRIDGES, 50c per box of 25. **JOHNSON SMITH & CO., DEPT. 836, RACINE, WIS.**

MICROPHONE TRANSMITTER BUTTON

You can easily make a highly sensitive telephone by using this Transmitter Button to collect the sound waves. You can build your own outfit without buying expensive equipment. It is simple and inexpensive. You can install an outfit in your home and hear conversations being held all over the house. You can connect up different rooms of a hotel. This outfit was used by secret service operatives during the war. It is being used on the stage. It is ultra-sensitive and is the greatest invention in micro-phones. You can mount the button almost anywhere—ward board boxes, stove pipes, still calendars, on the wall behind a picture frame, etc. Button is so light and small it cannot be detected. Persons can be overheard without suspecting it. You can listen in on conversations in another room. A deaf person in the audience can hear the speaker. Connected to phonograph, piano or other musical instrument, music can be heard hundreds of feet away. Button may be used to renew telephone transmitters; often makes an old line "talk up" when nothing else will. The ideal microphone for radio use; carries heavy current and is extremely sensitive. Amplifies radio signals. Countless other similar uses will suggest themselves. Experimenters find the button useful for hundreds of experiments along the lines of telephones, amplifiers, loud speakers, etc. Many fascinating stunts may be devised, such as holding the button against the throat or chest to reproduce speech without sound waves. PRICE \$1.00. **JOHNSON SMITH & CO., DEPT. 836, RACINE, WIS.**

SURPRISE MATCHES

More fun than fighting with your wife. Look just like ordinary matches. Put up in boxes just like regular Safety Matches. As the victim tries to light one he gets quite a surprise. Price 10c per box, 3 boxes for 25c, 12 for 75 cents.

INVISIBLE INK

The most confidential messages can be written with this ink, for the writing makes no mark. Cannot be seen unless you know the secret. Invaluable for many reasons. Keep your postal and other private communications away from prying eyes. Great fun for playing practical jokes.

Only 15c a Bottle; 3 for 40c.

JOHNSON SMITH & CO.

Dept. 836 RACINE, WIS.

Wonderful X-Ray Tube

A wonderful little instrument producing optical illusions both surprising and startling. With it you can see what is apparently the bones of your fingers, the lead in a lead pencil, the interior opening in a pipe stem, and many other similar things. A mystery that no one has been able to satisfactorily explain. Price 10c, 3 for 25c, 1 dozen 75c. **JOHNSON SMITH & CO.**

NOSE BLOWER

When some men blow their noses it sounds like a trombone. Now the NOSE BLOWER has come to torment us. It is a starter! It is ingeniously concealed in the handkerchief. Proceed to blow your nose and your friends will think they heard a steam engine or something. You can blame the hideous noise to your having a very bad cold and keep up the fun as long as you like. PRICE 10c, 3 for 25c, or 75c doz. postpaid.

Serpent's Eggs

Box contains 12 eggs. When lit with a match, each one gradually hatches itself into a snake several feet long, which curls and twists about in a most life-like manner. Price per box, 10c postpaid, 3 for 25c.

BOYS! BOYS! BOYS! Throw Your Voice

Into a trunk, under the bed, under a table, back of the door, into a desk at school, or anywhere. You get lots of fun fooling the teacher, policemen, peddlers, and surprise and fool all your friends besides.

THE VENTRILO

is a little instrument that fits in the mouth out of sight. Cannot be detected. It is used in connection with the above, and with the aid of this wonderful DOUBLE

THROAT, or VENTRILO, you can imitate many kinds of birds, animals, etc. Remember you get everything for **ONLY TEN CENTS**—a booklet giving you full instructions how to become a ventriloquist and throw your voice, the Double Throat, or Ventrilo, and our big 600 page catalog of novelties, tricks, puzzles, masks, books, etc., **10 cents**

LEARN TO PITCH

By the world's greatest pitchers. Prepares you mentally, morally and physically to become a great baseball player and a great athlete. Special course of lessons by **CHRISTY MATHEWSON**, who explains the secret of how to throw the great "FADEAWAY" ball, so much feared by the great batters; **ED WALSH**, the pitcher who discovered the secret of throwing that famous, mysterious, and unimitable "SPIT BALL"; **JOE WOOD**, the "Smoke Ball" marvel, next to the speediest pitcher in the world; **WALTER JOHNSON**, the man who has struck out more league batters in a single season than any other pitcher known; **NAP RUCKER**, inventor of the "Knuckle Ball"; and **DOC WHITE**, who teaches you the art of Shadow Pitching by which you can develop control and speed necessary to become a star pitcher. Clearly described and illustrated by 58 pictures. Everything complete for **ONLY 25 cents** postpaid anywhere. Nothing more to buy.

U. S. BABY TANK

25 Cents

It goes with real Yankee Pep—by its own power. Most remarkable toy ever invented. By drawing the Tank forward, either with the hand or over the floor or table and then placing it down, it will crawl along, overcoming all obstacles, in the same life-like manner as the larger tank that proved so deadly in the great war. What makes it so is somewhat of a mystery, for there is no mechanism to wind up as is usually understood with mechanical toys, yet this tank will keep plodding along ten times longer than the ordinary run of toys. It will perform dozens of the most wonderful stunts: 2 1/2 inches long. Price only 25c prepaid. Stamps accepted.

JOHNSON SMITH & CO.

15c POSTPAID Card Sailer Pistol

It shoots small squares of cardboard, sending them spinning and sailing through the air to great distances. Length 8 3/4 inches. Wood barrel, metal handle, heavy rubber band. Plenty of ammunition and extra rubber with each gun in neat box. More ammunition can be made as desired. Can use without the ammunition as a fly killer. **PRICE ONLY 15c each, 3 for 40c, or \$1.35 per doz. postpaid. Stamps accepted.**

JOHNSON SMITH & CO., Dept. 836, RACINE, WIS.

Great Fire Eater

A great trick by which you can apparently breathe fire from mouth, to the horror and consternation of all. Quite harmless. All apparatus necessary sent complete in box for **ONLY 30c, p. gd. JOHNSON SMITH**

SEEBACKROSCOPE

Place this clever instrument to your eye, you see what is going on behind your back. Very interesting things sometimes occur which no one thinks you are looking. Just like having eyes at the back of your head. **PRICE 25c POSTPAID**

Send remittance (Postage Stamps accepted) for all articles listed above, also in our other ad on previous page

SQUIRT ROSE

25c

A REAL STARTLER. This is the most popular of all squirt tricks. The flower in your coat looks so fresh and sweet that everyone is tempted to inhale the delightful perfume. Then is the moment to press the bulb. Gosh! It's a rubber tube that easily reaches to the pocket of your coat or trousers, and the bulb is large enough to make a dozen shots with one loading. **PRICE 25c each, or 3 for 65c postpaid.**

MAGICIAN'S BOX OF TRICKS

Apparatus and Directions for a Number of Mysterious Tricks, Enough for an Entire Evening's Entertainment. **\$1.00**

ANYONE CAN DO THEM

It is great fun mystifying your friends. Get this Magician's Cabinet, and you will be the cleverest fellow in your district. It contains the apparatus for ten first-class tricks, including the MAGIC BALL AND YAGEE TRICK (a wooden ball is placed inside, and upon replacing the lid has disappeared and is found in someone else's pocket); the HIDDEN TRICK CARDS (can be made to change completely in less than five times); DISAPPEARING COIN BOX (coin placed in the wooden box, vanishes entirely or changes into a coin of another denomination); the GLASS CUP-LET TRICK (a coin is dropped into a glass of water and when the water is poured out the coin has vanished and is found somewhere else); the HIDDEN FACTORY FROM THE MOUTH TRICK (a seemingly endless supply of colored paper ribbons comes out of your mouth); the DISAPPEARING HANDKERCHIEF (a handkerchief held in the hand mysteriously vanishes); the WARD'S KING COIN TRICK; the KNIGHT CHAINED BUTLE (any one but yourself is able to make it fly down); the GREAT LIFT AND FLY TRICK (a large disc is placed on top of a list, disappears, and is found underneath yet no one has touched the list); and last, but not least, the GREAT PHANTOM CARD TRICK, or two from five leaves pulling. Full instructions are sent for performing each trick. In addition to the above, a number of other tests and illusions are fully explained for which you can easily make or procure the necessary apparatus. **Price complete \$1.00 postpaid. JOHNSON SMITH & CO.**

RESURRECTION PLANT

Great curiosity. Place in water, plant opens up and starts to grow in few minutes. Taken out it dries up and goes to sleep until put in water again.

PRICE 10c, 3 for 25c, 75c dozen, postpaid.

DISSOLVING VIEWS

50c

You may have a lot of fun with this little apparatus. A regular starter. Made entirely of metal, having a microscopic lens fixed into one end. While the victim is absorbed in admiration of the pretty picture, and turns the button in the confident expectation of seeing something interesting, a spring syringe is brought into action, and the observer experiences a very great surprise. **50c, p. gd. JOHNSON SMITH & CO., Dept. 836, Racine, Wis.**

Comical Motto Rings

Lots of harmless fun and amusement wearing these rings. Made in platinum finish (to resemble platinum), with wording on enameloid, as illustrated. **Price only 25c Postpaid.**

The "Little Giant" Typewriter

A First Class Writing Machine For \$1.50

A perfect little typewriter for \$1.50. There are thousands of persons who would like to use a typewriter but whose funds and business do not warrant the expense attached to the purchase and use of a fifty or seventy-five dollar machine. To such persons we confidently recommend our Little Giant. It is strongly made, but simple in construction, so that anyone can quickly learn to operate it, and write as rapidly as they would with pen and ink. The letters of the alphabet most frequently used are so grouped as to enable one to write rapidly, the numerals 1 to 10, and the punctuation marks being together. With this machine you can send your best girl typewritten love letters, address envelopes, make out bills, and do almost any kind of work not requiring a large, expensive machine. With each typewriter we send tubes of ink and full printed instructions for using the machine. **Price complete \$1.50 by mail postpaid to any address in the world.**

Trippe Sunshine Carbon Arc Lamp

Sales Records Smashed—Carbon Arcs Sweeping Country!

Sunshine Mad

The world has suddenly gone sunshine mad. Prominent doctors, eminent scientists everywhere have been preaching the virtues of sun light. People paid little heed. Then King George of England was treated at the crisis with a sunshine lamp and the world went mad.

Everybody Eager for It

It has suddenly dawned on people that the nation is sun-starved—that under modern conditions natural sunlight can not be had. People now realize the wonderful invigorating, rejuvenating effect of artificial sunshine produced by the carbon arc and are clamoring for these types of lamps faster than they can be made.

Your Own Private Sun

Not only do these lamps pep up the whole system, relieve aches and pains, cure disease, but they prevent disease. Flu, colds, pneumonia, etc., are definitely stayed off by the splendid resistance given to the body under the influence of the magic rays of carbon sunlight.

Trippe Sunshine Arc

The Trippe Sunshine Arc is the most advanced type of carbon arc construction—splendidly efficient, well made, simple, and one of the best looking of all Carbon Arc Lamps. It stands in marked contrast of graceful design, portability, compactness against the cumbersome lamps now in the market. It is far lower in price and we guarantee its effectiveness to equal any lamp up to \$300.

New Health and Happiness

In Your Own Home!

"Artificial Sunlight" with the Warmth and Vitality of July Sunshine

Follow the NEW WAY TO HEALTH! Let every member of the family enjoy the Health-giving qualities of The Halldorson Health-Light. Simply snap the switch and you have the miracle of miracles in your own home; **INFRA-RED** and **ULTRA-VIOLET RAYS**—acknowledged by science to produce the health-giving qualities that relieve congestion or trouble that causes ache or pain.

PROTECT THE FAMILY

WHY SUFFER NEEDLESS PAIN

LATEST TRIUMPH of MODERN SCIENCE

Sunshine is the universal physician. Artificial Sunlight was used in the treatment which resulted in the recovery of King George of England! What greater praise could be said of this latest triumph of modern science.

BUILDS UP RESISTANCE AGAINST ILLNESS

The very fact that every well-equipped hospital now possesses at least one of the new Ultra-Violet Lamp Outfits speaks encouragingly of this scientific way of healing the body and restoring health and happiness. A great benefit in cases of anemia, rickets, neuralgia, neuritis, rheumatism, lumbago, "flu" and many other ailments. Brings renewed strength. Excellent for baldness.

A NOTED HEALTH COMMISSIONER SAYS:

The best diet is useless unless accompanied by sunshine, either natural or **ARTIFICIAL**.

The New International TICKET SCALE

A Private personal weighing service.

Exclusive territorial franchises for the purchase and operation of chains of International Ticket Scales are now being negotiated. Your first opportunity to enter an outstandingly successful division of the Automatic Merchandising Field. . . .

Did you weigh yourself today? Perhaps you did not, but literally millions of people did. Tons of pennies are dropped into the familiar penny scales in drug and other stores each year.

Now comes a new and better scale that prints the weight and fortune on a ticket. It gives a private personal weighing service. It is the product of twenty years' experience in the manufacture and operation of penny-actuated scales.

Its slogan is "Nothing of its kind is so fine," and we might add, so profitable. In appearance the finest and most distinctive of scales. The scale and printing mechanisms are built on time tried and approved principles. Refined, perfected and simplified for faster, more positive operation and greater accuracy—and to stand up longer.

If you owned a chain of these scales, working for you day and night, you would have a steady sure source of income, unaffected by economic changes, by poor business, or by other unfavorable factors. You would have a business practically without overhead, with no credit problem, with no administration expense, and with the minimum of working personnel.

To Chain Store Executives: An International Ticket Printing Scale in each of your stores will add a substantial amount to your net profits. For full information, write the Chain Store Manager of the International Ticket Scale Corp., 17 E. 45th St., New York, N. Y.

The first to place International Scales on location will reap an unusually rich harvest. Those now in a position financially to secure exclusive franchises for important cities, will look at the future with eyes that are unafraid. The earnings in this business, as high as 47% annually on the investment, will also attract those with a few thousand dollars, who desire the maximum return from their investment, and who are willing to devote a small amount of their own time to their care.

Full details concerning all phases of the operation of chains of International Ticket Scales, are given in a booklet which we will be glad to send on request to any financially responsible person. Simply write International Ticket Scale Corp., Dept. 107, 17 East 45th St., New York, N. Y.

Every Day

you give your razor a different job to do
but your Gillette Blade will do every job smoothly and surely

IT takes all kinds of days to make a week. This morning you can take your time. Tomorrow you have to rush. One day you're feeling fit; the very next morning you may be ragged from lack of sleep. Hot water, cold water, soft water, hard water, a slap-dash lather, or a careful thorough preparation of the beard which may take a full three minutes.

You never give your Gillette Blade the same job twice.

Yet you can always get a smooth, comfortable shave from your Gillette Blade; the blade, at least, doesn't change, and its swift, sure

job is the same under any conditions.

Eight out of ten American men count on the Gillette Blade to start the day right—seven days a week. And Gillette takes extraordinary precautions not to disappoint them.

The steel is the finest in the world. It comes in long gleaming ribbons, and we test every ribbon with crucible and micrometer be-

fore we even pay the import duty.

During the last ten years Gillette has spent millions of dollars on steady blade improvements alone. Four out of every nine Gillette employees are inspectors and do nothing else. They get double pay for every blade they discard. They make certain that every package of Gillette Blades contains its full quota of smooth, comfortable shaves for you.

GILLETTE SAFETY RAZOR CO., BOSTON, U.S.A.

To be sure of a smooth, comfortable shave under any conditions, slip a fresh Gillette Blade in your razor.

Gillette

Thrilling to Ride as a Thoroughbred

THERE is a zip and dash to motorcycle performance that is unmatched by anything else on wheels.

Harley-Davidson's eager speed on straightaways, its lightning acceleration, its smooth, quiet rush uphill are the joy of the seasoned rider and the amazement of the novice.

Shown above is the latest Harley-Davidson Big Twin — a wonderfully efficient, powerful, speedy motorcycle that gives sparkling performance at very low cost. Harley-Davidson Twins are priced from \$290 up, f.o.b. factory — Singles at \$235 and \$255.

Ask your nearest Harley-Davidson Dealer about his Pay-As-You-Ride plan. Mail the Coupon for illustrated literature.

Grind it as you find it.
Mower slips into machine
without being dismantled.

This Man
is making
\$4.00 to \$6.00
an hour
with the IDEAL
LAWNMOWER
SHARPENER
—Why don't You?

Extra Money in Your Spare Time

The Ideal Lawnmower Sharpener will make every hour of your spare time or time when your work is slack, worth from \$4.00 to \$6.00 to you.

Profitable? Just ask C. S. Coburn of Little Rock, Ark. In 18 months the Ideal Sharpener not only paid for itself but earned enough money to buy \$1875.00 worth of new machinery he wanted for his shop—and he worked only during his spare time.

Put it in Your Basement

or Shop or Garage or even in your yard. The Ideal Sharpener takes up no more room than an ordinary sewing machine and can easily be put in some corner where it will be out of the way when not in use. Many owners mount their Ideal Sharpeners on trucks and travel with them.

Ready to Go to Work

You don't have to be a mechanic to operate the Ideal Sharpener. It's all ready to go to work as soon as you get it. Set the mower in the machine, make a few simple adjustments, plug into your light socket and start grinding. You don't even have to dismantle the mower.

\$1.50 to \$2.00 in Fifteen Minutes

You can finish sharpening a mower in 15 or 20 minutes, grinding every blade to razor-like edge, with the accuracy of a lathe. And every mower sharpened earns you \$1.50 to \$2.00, depending upon the charge you fix.

Earns All Year Round

When lawnmowers are out of season the Skate Sharpening and Grinding Attachments enable you to earn extra money all year round. It handles all kinds of skates, including hockey skates with shoes attached, grass and hedge shears, axes, sickles, scythes, and other edged tools.

Uses Little Power May be operated with 34 H. P. Motor from light socket, or run direct from line shaft.

An Independent Business From a Side Line

Walter Wever of Middletown, N. Y., built up an independent business working in spare time alone and earned over \$4000.00 in 4 months time with his Ideal Sharpener. He says, "I now have the largest business of its kind around here. People send mowers from 25 to 30 miles to my shop to be sharpened with the Ideal Sharpener. I have made over \$4000.00 in 4 months time." Not bad for a side line and you have the same chance as Mr. Wever.

Work For Yourself

Be your own boss. A few hours of your spare time in the evenings, with the Ideal Sharpener will soon put you on the road to independence. Our Free Book, "Let George Say It," will help you get started just as it helped C. W. Bowditch, of Lyons Falls, N. Y., to earn \$60.50 in a single month during his spare time; or W. F. Kendt, Buffalo, N. Y., who earned \$2100.00 in a single season, with his Ideal Sharpener, in his spare time. Send for this book now and get started early.

You Don't Have To Wait

You'll earn from the very start with the Ideal. No town is too small. There are hundreds of mowers in every community waiting to be sharpened and every mower sharpened with the Ideal will bring more business to you. J. C. Keenan, Norwood, Mass., writes, "My friends have advertised the Ideal so much that I have my hands full of work and am still going strong. I have yet to have a dissatisfied customer." You can get into this same paying business just as soon as you get your Ideal Sharpener.

Pays For Itself

The Ideal Sharpener will pay for itself before you know it and will put extra money in your pocket from the very start. T. S. Huffman, Severy, Kans., says, "I received my Ideal Sharpener two weeks ago and have paid for it already." Chas. P. Bloom, Morrisville, Pa., says, "My Ideal Sharpener has paid for itself already. In the first two weeks I sharpened over 50 mowers and more business is coming in every day." Geo. Kearney, Stillwater, Minn., sharpened 102 mowers in the first two weeks after he got his Ideal. You have the same chance as these and hundreds of other men, who are earning from \$4 to \$6 an hour with this remarkable Lawnmower Sharpener. The sooner you get started the more money you will earn. Mail the coupon today that will put you on the road to independence.

JAPANESE ROSE BUSHES

The Wonder of the World

Japanese Rose Bushes bloom all the year round. Just think of it. Six weeks after planting the seed, the plants will be in full bloom. It may not seem possible, but we positively guarantee it to be so. They will bloom every ten weeks, Summer or Winter, and when three years old the bush will be a mass of roses, bearing from five hundred to a thousand roses on each bush. The flowers are in three shades—white, pink, and crimson. The plants will do well both in and out doors. We guarantee at least three bushes to grow from each packet of seed. Price, 10c packet, 3 pkts. for 25c postpaid.

Chinese Fragrant Tree Fern

Just introduced; noted for its rapid growth. An exceptionally pretty ornamental plant. Foliage is rich dark green. Forms grand pyramidal bushes about 6 feet high. Branches very desirable for decorative purposes, wreaths, etc. Seeds 15c pkt., 3 for 40c.

Weather Plant

NATURE'S WEATHER PROPHECY By mysterious changes that take place, this remarkable plant accurately forecasts the weather many hours in advance. Will grow anywhere all the year around. An interesting house plant. Bears large, fragrant, pink, butterfly shape flowers. Seeds, 15c packet, 3 for 40c, postpaid.

GROUND ALMONDS

Amazingly Prolific—Easily Grown From Seed The Ground Almond has a flavor that is MOST EXCELLENT, resembling the coconut. The meat is snow white, covered with a shell or skin of brown color. It grows close to the surface and anything from 200 to 300 Almonds may be expected from a single nut. There is no trouble whatever in growing anywhere and in any kind of soil. May be planted any time, and in eight or ten weeks from time of planting you will have an ENORMOUS CROP of the MOST DELICIOUS ALMONDS YOU EVER TASTED. Seeds 15c Pkt.

Perfume Plant

Blooms only at night, giving forth the most delightful scented fragrance for quite a distance. Causes much comment. For house or garden. Also valuable because of rare perfume made from it. SEEDS, 10c pkt., 3 for 25c.

Calabash or Pipe Gourds

A luxuriant and rapid growing climber; thrives anywhere. Produces the ornamental gourds from which the famous African calabash pipes are made. Grow this interesting vine and make your own. Seeds, with instructions, 15c pkt., 3 for 40c.

Mammoth Peanuts

Peanuts can be easily cultivated. Their culture is very simple and exceedingly interesting. Mammoth Peanuts grow to an astonishing size. It is a good producer, very prolific, and the giant nuts have a thick, heavily ribbed protecting shell. The plant is very attractive, the leaves being of odd shape and a handsome green shade, tinted through the center with white. You will derive much pleasure cultivating this interesting species. Seeds 15c pkt., 3 pkts. for 40c.

Musk Plant

A universally admired favorite for house, flower garden or greenhouse. A very fine lemon plant, leaves for perfume. Is of the most scented variety, giving forth much fragrance. Also valuable on account of the perfume that can be made from it. Seeds 15c pkt., 3 for 40c.

Japanese Climbing Cucumber

Unusually strong and vigorous growing vine. Attains twice the size of ordinary varieties. Grows rapidly on fences, poles, trellises, etc. One hill will keep an entire family supplied all summer. Seeds 15c packet, 3 for 40c, postpaid.

GIGANTIC BUTTER BEANS

THE NW EDIBLE VEGETABLE WONDER Grows to an astonishing size, the beans measuring from 3 to 6 feet long, and weighing anything from 10 to 16 lbs. and even more. One bean is sufficient for a family for several meals. Very palatable and rich in nutritious materials. The delicate buttery flavor is much appreciated. The vines are easily grown, very prolific, and a most welcome and valuable adjunct to your garden. Try them; you will find them the most delicious vegetable you have ever tasted. Imported direct. Unobtainable elsewhere. Sample package of seeds with full directions for cultivating and cooking. 25c, postpaid.

Kudzu Vine

Most rapid growing vine known. Will grow 20 feet in one week. Luxuriant foliage, lovely purple flowers, very fragrant. Nothing to equal it for shade purposes and quick growth. Seeds 15c packet, 3 for 40c.

Yard Long Bean

Produces enormous crop of long, slender, round pods, of excellent quality for snap beans. Pods grow from 2 to 3 feet in length. Very tender and fine flavor. The vines are rampant growers; an interesting curiosity. Seeds 15c pkt., 3 for 40c.

THE REMARKABLE FIREFLY PLANT

A Vine that Blooms at Night

Fills the Atmosphere with Fragrant Aroma One of the most rapid growing vines known. Under favorable conditions this vine has been known to grow OVER 25 FEET IN A SINGLE WEEK. In a very short space of time indeed the vine has climbed to a great height, and is covered with IMMENSE FLOWERS, from 6 to 7 inches in diameter. It is, indeed, a great novelty, for, unlike other plants, the flowers OPEN IN THE EVENING, and remain open until about noon the following day. In all weather they will remain open all day. It is a most INTERESTING SIGHT to watch the opening and closing of the flowers as the clouds appear and disappear. As the flowers open they give forth the most DELIGHTFUL AROMA and the whole atmosphere around is full of scented fragrance. It is always the object of favorable comment, and much curiosity is aroused by people passing at night time to the cause of the charming aroma, frequently stopping in an endeavor to satisfy their curiosity. PRICE, 12 CENTS packet, two packets for 35 CENTS, POSTPAID. JOHNSON SMITH & CO.

The Great Wonderberry

A luscious berry that may be grown and ripened from seed in any soil or climate in 3 months. The flavor is fine and unsurpassed for eating raw, cooked, canned or preserved in any form. The fruit is black in color, and tastes like a luscious rich blueberry. One bush will produce an enormous amount of fruit, yielding great masses of rich fruit all Summer and Fall. Packet, 10c, 3 pkts. for 25c, postpaid.

Bush Musk Melon

A vineless Musk Melon, grows in bushes, and thus can be cultivated in the smallest garden. The fruit is of the popular "Jenny Lind" type, but larger, averaging 5 inches in diameter. The flesh is very deep, edible almost to the rind and is colored light green, flushed with a rose toward the center. The quality is superb, deliciously sweet and juicy. Packet of seeds, with full directions for culture, 15 cents, 3 packets for 40 cents, p.p.d.

The Great Umbrella Palm

Easily Grown From Seed Winter or Summer The Japanese Umbrella Palm is a semi-aquatic plant. It is easily grown from seed either in a bowl of water or in very damp soil. Probably the most usual, as well as the most interesting method, is to cultivate the plant in a bowl or jardiniere filled with water, with two or three inches of good garden soil at the bottom. The seeds soon commence to germinate, and the plant shoots up stems two to three feet high and rapidly assumes a most pretty palm-like appearance, as shown in the engraving. The tops of the stems are surmounted by a whorl of umbrella-shaped leaves, of a waxy appearance. We will send a package of this seed, with full instructions for culture, for only 15c or three packets for 40c postpaid.

Butterfly's Own Bush

This plant is a veritable refuge or haven for butterflies, and it attracts all the most beautiful types of butterflies to the neighborhood. Bees, too, are very fond of it. It is a pretty plant bearing perfectly double flowers, ranging from white to rich crimson, deep red and pink, lilac and other delicate shades. Packet 10 cents, 3 for 25 cents postpaid.

FAMOUS MEXICAN FIREFLY PLANT

Beautiful hedge plant, grows 2 to 2 1/2 feet high and resembling a closely clipped ornamental evergreen. The globe-shaped or pyramidal bushes are close and compact, and of a pleasing light green color. May be grown singly or in the form of a hedge or background. In early autumn the whole bush becomes crimson or blood red, hence the name of Mexican Fire Plant, or "Burning Bush," as it is sometimes called. Selected Seeds, 10c

CROWN OF THORNS

A very curious clover-like plant, can be cultivated indoors or outdoors, the three red blotches on the leaves representing the three wounds of Christ. Has curious thorny seed ball; if loosened at the hilt is found to consist of a long prickly-edged band wound spirally around the seed cluster, giving the plant its name. Seeds 15c packet, 3 for 40c.

"Wong-Bok" Chinese Cabbage

Novelty from China and should be grown in every garden. Seems to be a cross between Celery and Cos Lettuce. Flavor is more mild than any other cabbage. Can be served on the table and eaten raw or cooked like cabbage, spinach or lettuce or made into salad. Grows very rapidly, easy to cultivate. You can create quite a sensation by cultivating this remarkable novelty. Seeds, 15c packet, 3 pkts. for 40c.

Asparagus Sprengeri

The best plant for hanging baskets. Masses of rich, gleaming foliage droop in a very graceful manner. The foliage when cut for decorative purposes will last for weeks in water. The seed pods are very pretty red berries adding to its beauty. Packet, 25c, 3 pkts. for 65c postpaid.

TREE OF HEAVEN

This splendid ornamental tree is a native of China, and is called the Tree of Heaven, on account of its great beauty. Very hardy, thrives in any soil, no matter how poor, and grows from 6 to 10 feet high from seed the first summer. The leaves are from 5 to 6 feet in any length, giving it a grand appearance. Nothing outside the tropics can rival it for lawn decoration. Large panicles of bloom, followed in season by great clusters of colored seed pods, make the tree a continual thing of beauty. Packet, 15c; 3 packets 40c.

SURPRISE FLOWER GARDEN

Over Hundred Varieties of Mixed Flower Seeds MANY RARE AND CURIOUS NOVELTIES An Abundance of Flowers Assured throughout the Season A mixture of easily grown annuals that bloom very soon after sowing the seed; others vary in their time of blooming. Those who cannot give the constant river necessary for finely arranged flower beds will be delighted with the Surprise Wild Flower Garden. Will prove a continual surprise and pleasure, as new varieties and the old garden favorites flower successively throughout the season. There are over a hundred varieties of seeds. Many of the plants may be taken inside as house plants and will bloom during the winter. Fine for children, and will teachers for school gardens. Packet, 15 cents, three packets for 40 cents, postpaid. J. S. & CO.

They Could Hardly Believe Their Own Ears - when I Switched to *Ground Wave Reception*

"IT'S no use trying to listen in tonight," said Bill as I took his hat. "Jane and I tried to get reception during dinner but all we got was static. It's usually this way—just the night they broadcast Paul Whiteman's band or some other good program it's spoiled by howls and fading."

"Perhaps my set will do a little better," I suggested. I had a surprise in store for him!

He looked doubtful as I turned on the set switch. I had left my old aerial antenna attached on purpose and soon the room was filled with an ear-splitting excuse for music. Manipulation of the dials only served to make it worse. Occasionally it faded out altogether. Then the howls would start up again until my wife finally shouted, "Turn that thing off—it's terrible."

Satisfied, I laughed and disconnecting the old aerial and ground wires I then attached the lead-in wires of my new underground antenna, which I had installed just before dinner. "Now listen!" I commanded.

The Thrilling Test

As though by magic, the sweet high notes of violins and the stirring sobbing of saxophones brought Bill to his feet! Jane looked dumbfounded. The static was so greatly reduced that we hardly noticed it! We were getting one of the year's best programs with scarcely any trouble on a wild, stormy night.

"You see," I explained later to Bill. "I buried my new underground aerial about two feet below the ground, where wind and storms can't affect it so easily. They call

this thing "Subwave-Aerial" and it's insulated some way to keep out interference and noise. It's combined with a scientific ground so I'm sure now that I have the correct ground connection. All this isn't costing me any more than my old aerial antenna. And I'll never need to touch it again. It's guaranteed for 25 years.

Hardly necessary to say that Bill went home with the name and address of the Subwave-Aerial manufacturers in his pocket.

Test It Yourself—FREE!

The above story illustrates the results for which the designers of Subwave-Aerial struggled for months. At last, enthusiastic reports such as this from Radio Experts reproduced here, proved that they had succeeded. Now you have a chance to prove the merits of this great new radio development for yourself. Try if possible, to pick a night when static is bad and make the thrilling test. It's fun! And if you are not more than pleased, the test won't cost you a cent. Be sure to send at once for all the interesting details on the development of Subwave-Aerial. Use the coupon NOW!

SUBWAVE-AERIAL Gets DX Installed 50 Feet From 60,000-Volt Power Line

"On January 27, 1929, drove out near the Sanitary District power plant—stopped about 50 feet distant from 60,000-volt transmission line—dug a small hole, into which we dropped the Subwave-Aerial, attaching the lead-in wires first to a 5-tube Freshman, then to a single-dial Atwater Kent, Model 35.

"We got WCCO, St. Paul, Minn., and Toronto, Can., loud and clear—not the slightest interference from the 60,000-volt power line 50 feet away. It was impossible to get reception with an overhead aerial under the same conditions." Yours truly,

F. Bennett Smith,
Harry R. Jackson.

ANNOUNCING SPORS No. 1 Guaranteed Pen

*Embodying All of
the Latest Features*

Rubber sponge keeps point ever moist, thus pen writes the instant it touches the paper. The point is glass, which is one of the hardest substances known, — will not spread and can be held in any position. An excellent ruling pen. The eight grooves in point permit an even flow of ink.

Ideal for business men, express agents, bookkeepers, students, stenographers; in fact any person using a pen.

Guarantee— New Hair grown quickly or no pay—

FREE TRIAL
mail coupon
below—NOW

The amazing story of INFRA-RED RAYS

NOW at last—through the electric magic of Infra-red Rays—Science has found a startling way to grow new hair quickly.

No matter how fast your hair is falling out, no matter how much of it is gone—this is our guarantee: This amazing new electrical discovery will end your dandruff, stop falling hair and grow thick, luxuriant new hair in 4 weeks—or you pay nothing! You risk nothing. You are the judge—your own mirror will furnish the astounding evidence.

Famous Surgeon's Discovery

All observant men have noticed that their beard grows faster in hot weather than in cold. What causes that?

Simply this: Heat rays of a certain kind that stimulate and vitalize the hair-growing tissue.

Two years ago a noted surgeon, seeking to bring back his own hair—applying all his scientific knowledge to the problem—made a remarkable discovery. It is the first time a scientific man of his standing has ever entered this field of helpfulness.

He discovered a simple way in which to use life-giving invisible heat rays—known to all scientists

—to restore health and normal conditions to the scalp tissues and so **RESTORE HAIR** in all but certain rare instances. It ended his own baldness. Today his hair is unusually thick and luxuriant.

Called Dermo-Ray

Because of his scientific conservatism and his standing in his profession, the discoverer of Dermo-Ray made no general announcement of his startling discovery. But, as the head of his own hospital, his own case records—with hundreds of men and women—proved scientifically, conclusively, that this new discovery grows hair, when nothing else will—grows hair, ends dandruff, in **NINE OUT OF TEN CASES**. Now that the amazing power of Infra-red Rays is known to the entire scientific world—and **DERMO-RAY** has been proved to be one of the most startling scientific discoveries of recent years—now for the first time, has Dr. Theodore H. Larson permitted public announcement of his discovery to be made.

Infra-red Rays Reach the Roots

In nine out of ten so-called cases of baldness the hair roots are not dead. They are only dormant. But when you try to reach them with hair tonics, oils, massages and salves, you are obviously wasting both time and money. For you treat only the **surface skin—never get to the roots.**

Your own physician will tell you that the warm, soothing Infra-red Ray penetrates more deeply through human tissue

than any other harmless heat-ray known to science. It reaches the hair root and electrically, almost magically, **revitalizes** it. Hair literally "sprouts" as a result.

Send No Money

You can use **DERMO-RAY** in any home with electricity. The warm, soothing, Infra-red Rays vitalize your scalp while you rest or read—a few minutes each day is all the time required.

In four weeks you will be free forever from the social and business embarrassment of baldness—or you pay nothing.

Complete facts about this astounding new scientific discovery, opinions of authorities, incontrovertible evidence, and details of special trial offer will be sent free, if you mail the coupon below. To forever end your scalp and hair troubles, act at once. Print your name and address plainly—and mail the coupon **NOW**.

Rough Diagram Suggesting: Left—the long-wave Infra-red Rays; right—short-wave Ultra-Violet.

Silver Ace

Flying

*"Instructive and
Interesting!"
says Air Mail Pilot*

Walter J. Addems, who flies the Air Mail day and night on the Chicago-New York run says, "Model flying and construction is very instructive as well as interesting, because the same principles apply as in full-sized ships."

Silver Ace models have flown over 800 feet. Their performance depends on the owner. Boys of ten and twelve have no difficulties securing fine flights. How good are you?

Silver Ace construction sets and supplies are the same high quality as Silver Ace ready-to-fly models. Silver Ace leads in the air.

PRICES: DeLuxe Monoplane ready to fly (Cabin or Spirit of St. Louis type) \$12.50; partly assembled, \$9.00; knocked down, \$5.00; contest kit, \$5.00; Pair Biplane Wings, \$3.50; Pair of Funnels, \$4.00; Tri-Motor Fokker construction set, \$9.00. Add 50c for shipping in U. S., if your dealer cannot supply you with a Silver Ace. Send 10c for our beautiful new Catalog in color containing history of aviation, drawings of famous "ships," etc.

AERO MODEL COMPANY

Wouldn't you pay 2¢ to prevent \$200 mistakes?

... Then send for this **FREE** book

LET this FREE book, "How To Judge a Used Car," be your insurance against a mistake that may cost you hundreds of dollars!

Two cents brings you trade information compiled from the years of used car buying experience of many acknowledged experts. It brings you 32 interesting pages of text, every paragraph of which holds some valuable hint on used car buying. There are pictures illustrating just what to look for in the used car you want.

How can you tell the model of a used car? What do speedometers show? What do code prices mean? How would you set a fair price on a used car offered by a friend? How do you avoid "orphans"? Why does the Studebaker Pledge give you five days' driving trial? It takes only a 2c stamp to bring you the *right* answers — mail the coupon below *now!*

*130,000 people saved
money by mailing
this coupon*

Pledge to the Public on Used Car Sales

- 1** Every used car is conspicuously marked with its lowest price in plain figures, and that price, just as the price of our new cars, is rigidly maintained.
- 2** All Studebaker automobiles which are sold as **CERTIFIED CARS** have been properly reconditioned, and carry a 30-day guarantee for replacement of defective parts and free service on adjustments.
- 3** Every purchaser of a used car may drive it for five days, and then, if not satisfied for any reason, turn it back and apply the money paid as a credit on the purchase of any other car in stock—new or used. (It is assumed that the car has not been damaged in the meantime.)

\$2 to \$4 an Hour in Your Own Business

"I have had your Foley Saw Filer since December, 1926, and am well pleased with it. My filing averages \$15 a week in my spare time."

Chris Hoellwarth

FREE Plan Starts You in Spare Time

This is your BIG OPPORTUNITY to get into a FINE PAYING business of your own. Very little capital is necessary, and you have no stock to carry. Many men who started in their spare time, have built up a PERMANENT BUSINESS that pays them BIG MONEY. Paul Bock says, "Your filer is a wonder—have more filing than I can handle."

No experience necessary—you can learn to operate the Foley AUTOMATIC Saw Filer quickly by following the simple instructions. Even 14 year old boys are doing perfect work—you can too.

NO CANVASSING

The Foley files all kinds of saws—hand saws, band saws and circular saws. You can get all the work you can do from carpenters, contractors, schools, woodworking plants, hardware stores and many other businesses. The Foley files saws so perfectly that they are better than hand filed, and you will make steady customers after you have once filed saws for people.

LET SPRAYIT
*Give you a New
Standard of
Workmanship*

\$39⁵⁰
COMPLETE
with
Compressor Unit

*Plug Into
Any Light Socket*

GRASP the pistol-grip of the *New Agitator Type ELECTRIC SPRAYIT*—and pull the trigger! No matter what your job is—or the finish that you use—you're proud of the job it helps you do, quality workmanship, truly professional, speedy, economical.

There's reason for the tremendous success of the *New Agitator Type ELECTRIC SPRAYIT*. The "fluid agitation" feature is considered the greatest single improvement in spray painting equipment since its inception.

Plug-in the *New Agitator Type ELECTRIC SPRAYIT* at the nearest light socket—and you're ready to go. The spray, either fan or round shape, starts or stops instantaneously. The pistol-trigger controls it, always at full pressure, in a flash.

Handled by leading jobbers and dealers. If you do not know where to buy the *Agitator Type Electric Sprayit*, use coupon below.

Rent a Sprayit for Home Use

For any paint job in the home, your dealer can now rent you an *ELECTRIC SPRAYIT* at a nominal daily charge. Write for details of the new *Sprayit Home Rental Plan*.

It's a Gift

*Men, it's yours for the asking.
Mail the coupon for generous
7-day sample. It will prove a
revelation in shaving comfort.*

GENTLEMEN: Our success is based on the approval each morning, of a million men. If we fail to please them, if our quality is relaxed ever so little, we lose friends. And friends, we have found, are our best asset.

We gain these friends by a unique offer. Before we ask you to buy our remarkable shaving cream, we first offer it to you for a week's test free. Men who customarily never mail coupons, send this one in.

And 86% of those who try *Palmolive Shaving Cream* become staunch supporters for it. They make claims that we would hesitate to print. Their enthusiasm is supreme. Won't you let us send you a sample now that you may have seven delightful shaves at our expense? That will prove our case one way or the other. You be the judge. Just mail the coupon.

These 5 superiorities

Palmolive Shaving Cream came as the result of years of experiment. 129 formulas were rejected before we embodied all in one preparation, the things 1000 men had said that others failed in.

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for ten minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Perhaps your present shaving method satisfies, and yet there may be a better way. In fairness to yourself—and to us who undertake to please you in one week—won't you mail the coupon now for the test we offer?

•••••

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night—from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time; 7:30 to 8:30 p. m., mountain time; 6:30 to 7:30 p. m., Pacific time—over station WEAJ and 39 stations associated with The National Broadcasting Co.

To add the final touch to shaving luxury, we have created *Palmolive After Shaving Tale*—especially for men. Try the sample we are sending free with the tube of *Shaving Cream*.

Super Elto
Quad

The only man who could talk to the Superintendent

"Soon after I began studying," a student wrote to us the other day, "we had a change in management at our plant. I certainly was glad then that I had decided to study in my spare time. For, thanks to my I. C. S. course, I was the only man in the organization who could talk to the Superintendent in his own language. As a result, I was promoted over men who had been here from ten to twenty years. My salary has been increased 90% in the last ten months."

That's a true story of what just one I. C. S. student has done. There are thousands of others. Every mail brings letters from men and women telling of promotions and increases in salary due directly to spare-time study.

One hour a day, spent with the I. C. S. in the quiet of your own home, will prepare you for success in the work you like best. Yes, it will! Put it up to us to prove it.

START TO PLAY VERY FIRST DAY!

5 Minutes after I unpacked my Xylorimba I started playing!

FRANKLY, I was doubtful. I had always wanted to play some musical instrument. To be the center of interest at parties; to make \$5 to \$25 a night for work that is "play"; to know the joy of creating music—who isn't interested in these things?

But I had always dreaded the hours of exercise that most musical instruments require—"scale" practice in learning piano, finger exercises in learning violin, lip exercises in learning wind instruments. *It never occurred to me that the most spectacular of all instruments—the xylorimba—was also the EASIEST TO PLAY!*

First Step Toward Musical Happiness

Then one day I saw an ad like this one, wrote for the big FREE book, selected the instrument I liked best and ordered it on a strict 5-day trial basis—and on such easy terms that I hardly noticed the payments.

Five minutes after I unpacked my xylorimba, I was playing the notes of "Old Black Joe."

It was a simple melody, to be sure—but it proved that I would actually be playing *real music* from the very start, without the tiresome finger or lip exercises. How much more pleasant, under these conditions, to take up the wonderfully simple lessons, one by one, and gradually learn to play more intricate selections! How much more pleasant, too, to learn in the privacy of your own home without a teacher. Never have I had such fun—such cheery evenings—such a feeling of

progress. The whole family have become xylorimba enthusiasts. Already, I am teaching my sweetheart to play. What a happy pupil she is!

Friends Amazed!

Friends and relatives are amazed at my progress. To "dash off" a snappy fox-trot or dreamy waltz and then hear them shout for more, is a thrill that simply must be felt to be appreciated.

BIG BOOK FREE!

How would you like to play the xylorimba—to have your presence demanded at gatherings—to make extra money playing at parties, dances, radio studios and perhaps even on the stage? Hundreds have

done it. You can, too, even if you can't read a note of music right now! On receipt of the coupon we will send our big FREE book telling all about the Deagan instruments—the easy payments—the delightfully simple free lessons. Five days' free trial in your own home—and a year to pay! No time like the present, no day like today, when fun and profit are involved. Send in the coupon NOW.

J. C. Deagan, Inc., Dept. 1454, 1770 Berteau Av., Chicago

Send me, without obligation, full details of Free Trial offer and easy-payment plan on the Deagan Xylorimba.

Now—a home workshop that you can build!

An Entirely New Idea—Your Shop to Fit YOUR Needs

The 1929 SpeedWay Home Workshop antiquates anything you have ever seen. Nothing like it has ever been offered—a *unitized* shop—one that you can buy complete or, starting small, can build up part by part. No need to buy accessories you do not want! And the new SpeedWay starts with the most used tool of the home craftsman—a

1. The new SpeedWay Add-A-Part Home Workshop starts logically with the tool most used by home craftsmen—a rugged, heavy duty saw table.

rugged, heavy duty saw table that in itself sets a new standard.

Add the Unit You Want

As your shop progresses, you can now add just the part you need. Your rugged SpeedWay becomes a planer, a sander, a jig saw, a grinder, a buffer—or any device within the range of home workshop requirements—by merely buying whichever part you select. YOU decide what *your* shop shall be, building it as you go.

Patterned After Industrial Shops

The 1929 SpeedWay Add-A-Part Shop is nothing less than a cabinet factory reduced in size to fit YOUR workshop. Imagine the finest workshop in the land,

NEW!

patterned after equipment used in the world's best tooled factories.

10 Days FREE Trial

Inspect this shop before you buy. Write for catalog first—then, if you wish, present this catalog to your nearest distributor as evidence of your sincere interest and he will give you a half hour demonstration or, better still, he will let you work it yourself. You can even take it home for a ten day trial. If no distributor is nearby you may order direct from the factory with the same liberal terms and free trial.

USE THIS COUPON

2. Note the simplicity with which this powerful sawtable is converted into a wood turning lathe of generous capacity and lasting construction.

3. See how, "Step-by-Step," you can build a complete workshop. Here is a sturdy addition for planing and joining—adjustable to the finest limitations.

4. The immense popularity of the 1929 SpeedWay lies in the fact that you can Pick-Your-Own Shop Parts. This Sanding Table and Disk is one of seven units you add as needed.

Half Hour Demonstration FREE to Holders of SpeedWay Catalog

Write for your catalog first; then present it to any one of the distributors shown below. You will be given a half hour demonstration FREE.

No More Razor Blades To Buy!

365 KEEN SHAVES

A Year With One Single Blade

"I want to say that KRISS-KROSS Stropper is the best thing I ever saw. I have been using *one* blade continuously for one year and nine months and have no idea how much longer it will last."

C. S. Stephenson, Okla.

Inventor Discovers Amazing New Way to Shave! —Without Buying Blades!

KEEN, velvety shaves forever and no more blades to buy! That's what this astonishing invention offers the great army of American shavers today!

KRISS-KROSS is destined to revolutionize all existing traditions of shaving! Its performance is so sensational that it seems hardly fair to call it a stropper. Rather it is a *super-stropper* or blade-rejuvenator! No longer do you find that your blades "die" after five or six shaves. KRISS-KROSS "brings 'em to life" a surprising way! Actually—you can take a blade right out of a fresh package and improve it as much as 100% in eleven seconds with KRISS-KROSS.

MAGIC DIAGONAL STROKE

KRISS-KROSS employs the famous *diagonal stroke*, same as a master barber uses. Never before has anyone captured the secret of reproducing it automatically. Eight "lucky leather grooves" do the trick in 11 seconds with a precision it takes a master barber years to attain. Stropps from *heavy to light*. Adjustable, automatic jig flies up and notifies you that your blade is ready—ready with the *keenest cutting-edge that steel can take!*

KRISS-KROSS produces unbelievable sharpness and prolongs the life of any razor blade for months and even years. Fits all brands and makes except Durham. Eliminates 83% of shaving costs and solves your blade problem for all time!

SENSATIONAL OFFER

And now for my surprising offer. To introduce KRISS-KROSS, I am giving with it Free a new kind of razor. Possesses remarkable features. Instantly adjustable to any shaving position. A flip of

the finger makes it (1) T-Shape; (2) straight (old style); (3) or diagonal (new way). Also adjustable for *light, medium or heavy* shaves. Gives a *sliding* instead of *pulling* stroke. Simply zips right through the toughest crop of whiskers. Made of *rustless metal*. Comes with 5 special-process blades and is entirely unlike anything you ever saw before!

GET FREE OFFER

Send for full information on these surprising new inventions today. KRISS-KROSS products are never sold in stores. You deal direct with me or my authorized representative. Write for illustrated description and full details of free razor offer. It's even more remarkable than I can tell you in this short space. Clip the coupon now. Mail it today.

Agents \$30 a Day and Up

Make big money with KRISS-KROSS. Giving away FREE razors boosts your profits amazingly. H. King made \$66 in one day. N. C. Paige made \$104 in 3 days! Others average \$350 and up to \$750 a month! *Spare-time workers, Office and Factory men* make \$6-\$12 extra a day, showing KRISS-KROSS to friends and fellow employees. S. Kantala made \$154 extra last working evenings 3 weeks. Get details at once. Check bottom of coupon and mail it tonight!
